

MACPAC

Medicaid and CHIP Payment and Access Commission

Update on Medicaid DSH Reductions and Required MACPAC Report

James Teisl

September 19, 2014

Overview

The purpose of this session is to provide:

1. A brief review of Medicaid DSH payment policy
2. An update on reductions originally scheduled to begin in FY14
3. An overview of a newly required MACPAC report on DSH

Background

- Disproportionate Share Hospital (DSH) payments are statutorily required payments to hospitals serving low-income patient populations
- They are intended to improve the financial stability of safety-net hospitals and to preserve access to necessary health services for low-income patients
- In FY 2013, DSH payments accounted for over \$16 billion in total Medicaid spending

Federal DSH Requirements

- A hospital must receive DSH payments if:
 - Medicaid utilization is at least one standard deviation above statewide mean for hospitals receiving Medicaid
 - Low-income utilization exceeds 25%
- A hospital may receive DSH payments if:
 - Medicaid utilization is at least 1%
- Hospitals receiving DSH payments also must have at least two obstetricians that treat Medicaid enrollees
 - Does not apply to children's hospitals
- Statute provides states with broad flexibility in distributing DSH payments

Medicaid DSH Reductions

- ACA reduced DSH allotments based on expected decline in number of uninsured
 - Reductions were to begin in FY14 and end after FY20
- Subsequent legislation has delayed onset to FY17 and extended reduction to FY24
 - Under current law, FY25 reverts to pre-FY14 level

Fiscal Year	Annual reduction amount (billions)
2017	\$1.8
2018-2020	\$4.7
2021	\$4.8
2022-2023	\$5.0
2024	\$4.4

DSH Health Reform Methodology

- Final rule implementing reductions published prior to delays
- Each statutory factor accounts for 1/3 of reductions:
 - State uninsured percentage
 - Extent to which state targets DSH payments to hospitals with high level of uncompensated care
 - Extent to which state targets DSH payments to hospitals with high volume of Medicaid inpatients
- Only applied to FY 2014-15
 - New methodology is required for reduction scheduled to begin in FY 2017

Required MACPAC DSH Report

- Beginning in 2016, MACPAC is required to submit an annual report to the Congress regarding Medicaid DSH that includes:
 - data relating to changes in number of uninsured,
 - data relating to amount and sources of hospitals' uncompensated care costs,
 - data identifying hospitals with high levels of uncompensated care that also provide essential community services, and
 - state-specific analyses of the relationship between current and projected DSH allotments and the data elements above.

Required MACPAC DSH Report: Policy Questions

- What are the estimated effects of the Medicaid DSH reductions on states and hospitals?
- Do the estimated DSH reductions align with increased numbers of uninsured and reductions in uncompensated care?
- To what extent can existing data sources be used to provide information required by statute?

Required MACPAC DSH Report: Approach

- Evaluate availability, completeness, and relevance of potential data sources
- Construct an operational model to estimate DSH allocations
 - Based on CMS' DSH Health Reform Methodology
- Estimate state and hospital-level DSH allocations based on various data sources and assumptions
- Consult with stakeholders throughout process:
 - Providers
 - Federal agencies
 - States
 - Researchers
