EXHIBIT 30. (continued)

Notes: FY is fiscal year. Enrollment numbers generally include individuals ever enrolled in Medicaid-financed coverage during the year, even if for a single month. However, in the event individuals were also enrolled in CHIP-financed Medicaid coverage (i.e., Medicaid-expansion CHIP) during the year, they are excluded if their most recent enrollment month was in Medicaid-expansion CHIP. Numbers exclude individuals enrolled only in Medicaid-expansion CHIP during the year and enrollees in the territories. Children and adults under age 65 who qualify for Medicaid on the basis of disability are included in the disabled category. Individuals age 65 and older eligible through an aged, blind, or disabled pathway are included in the aged category. Data are from the Transformed Medicaid Statistical Information System (T-MSIS) and may not be comparable to prior years due to differences in data reporting.

Individuals are counted as participating in managed care if they had at least one month indicating plan enrollment. For MACPAC's analysis, Medicaid enrollees were assigned a unique national identification number using an algorithm that incorporates state-specific ID numbers and beneficiary characteristics such as date of birth and gender. The state and national enrollment counts shown here are unduplicated using this national ID. The sum of the state totals exceeds the national total because individuals may be enrolled in more than one state during the year. Medicaid enrollees may be enrolled concurrently in more than one type of managed care program (e.g., a comprehensive plan and a limited-benefit plan), so the sum of enrollment across program types as a percentage of total Medicaid enrollment may be greater than 100 percent.

Figures shown here, which are based on T-MSIS data, may differ from those that use Medicaid managed care enrollment report data. Reasons for differences include differing time periods, state reporting anomalies, and the treatment of Medicaid-expansion CHIP enrollees (excluded here but included in enrollment report data). Although the enrollment report is a commonly cited source, it does not provide information on the characteristics of enrollees in managed care (e.g., eligibility group).

– Dash indicates zero; 0.0% indicates an amount less than 0.05% that rounds to zero.

¹ Includes comprehensive managed care, health insuring organization, and Programs of All-Inclusive Care for the Elderly (PACE).

² Includes prepaid inpatient health plan (PIHP), prepaid ambulatory health plans (PAHP), accountable care organization, and other plan types. PIHPs and PAHPs include plans covering services for long-term services and supports, behavioral health, substance use disorder, dental, transportation, and pharmacy.

³ Primary care case management (PCCM) includes traditional PCCM, enhanced PCCM, and medical and health homes.

⁴ Includes both newly eligible and not newly eligible adults who are eligible under Section 1902(a)(10)(A)(i)(VIII) of the Social Security Act (the Act). Newly eligible adults include those who are not eligible for Medicaid under the rules that a state had in place on December 1, 2009. Not newly eligible adults include those who would have previously been eligible for Medicaid under the rules that a state had in place on December 1, 2009; this includes states that had already expanded to adults with incomes greater than 100 percent of the federal poverty level as of March 23, 2010, and receive the expansion state transitional matching rate.

⁵ Includes adults age 19–64 who qualify through a pathway other than disability or Section 1902(a)(10)(A)(i)(VIII) of the Act (e.g., parents and caretakers, pregnant women).

⁶ State has a state plan amendment (SPA) that allows the state to receive the enhanced federal medical assistance percentage (FMAP) for Medicaid children that would have, prior to January 1, 2014, been enrolled in CHIP if not for the elimination of the Medicaid asset test. These children cannot be separately identified in the T-MSIS data. Because the state claims the spending for these children as Medicaid-expansion CHIP, we reduced child enrollment and spending in these states based on the proportion reported in their SPA. Correspondingly, we reduced California's child enrollment by approximately 242,000, North Dakota's child enrollment by approximately 3,000, and Utah's child enrollment by approximately 11,000.

⁷ State reported enrollment for the new adult group that shows a difference of greater than 20 percent when compared with the CMS-64 enrollment report. The District of Columbia's average monthly enrollment was 39 percent less than the benchmark; Illinois's average monthly enrollment was 117 percent more than the benchmark; Kentucky's average monthly enrollment was 26 percent more than the benchmark; Maine's average monthly enrollment was 65 percent more than the benchmark; and Washington's average monthly enrollment was 29 percent more than the benchmark. Utah reported an average monthly enrollment in the new adult group of approximately 30,000 in T-MSIS but did not report any enrollment on the CMS-64 enrollment report. Virginia did not report any enrollees in the new adult group compared with approximately 198,000 average monthly enrollees on the CMS-64 enrollment report; Virginia expanded coverage to the new adult group beginning January 1, 2019, and may not be reporting enrollment under the correct eligibility code in T-MSIS.

⁸ State reported a large shift of enrollees between eligibility groups. Illinois reported about a 43 percent decrease for the child group, a 35 percent decrease for the disabled group, an 87 percent decrease for the other adult group, and a 543 percent increase in the new adult group compared with 2018; the state appears to have corrected their reporting of the new adult group but appears to have also reclassified some children, other adult, and disabled beneficiaries into the new adult group. Louisiana reported a 27 percent decrease in the aged group and a 50 percent increase in the other adult group compared with 2018.

⁹ State reported enrollment for the new adult group even though it had not expanded coverage in FY 2019.

¹⁰ State reported total enrollment that shows a difference of greater than 20 percent when compared with the CMS-64 enrollment report. Utah's average monthly enrollment was 24 percent less than the benchmark, and the ever enrolled total was 29 percent less than what was reported in T-MSIS in 2018.
