P R O C E E D I N G S

2

[10:30 a.m.]

3

CHAIR VERNON JOHNSON: All right. Good morning,  
everyone, and welcome to the December meeting of the  
Medicaid and CHIP Payment Access Commission. It's  
wonderful to see all of you, and I want to thank you for  
the flexibility as we shifted to a one-day format for this  
month, for sure.

9

So, as you know, we weren't able to convene in  
October, but rather than focus on what we missed, I really  
want to focus on what we built together today for our  
agenda, a really highly focused, timely, and substantive  
agenda designed to really keep our work moving forward  
without losing any momentum. As we know, Medicaid does not  
pause, and neither does the importance of the issues that  
we have before us today.

17

So, with that, let us transition to our first  
session, and for that, I will turn it over to our Vice  
Chair, Commissioner Duncan. So, Bob?

20

VICE CHAIR ROBERT DUNCAN: Thank you, Madam  
Chairwoman.

22

I'm excited to kick off today with Linn and Ava

1 giving us a couple of updates on our children with special  
2 health care needs transition to adult coverage. So we'll  
3 start out first looking at the findings that they've had,  
4 looking at the data, and go from there.

5 So, Linn, Ava, welcome.

6 **### CHILDREN AND YOUTH WITH SPECIAL HEALTH CARE NEEDS**  
7 **(CYSHCN) TRANSITIONS TO ADULT COVERAGE: T-MSIS**  
8 **FINDINGS**

9 \* LINN JENNINGS: Thank you, Commissioners.  
10 I'm just waiting two seconds to start switching  
11 slides.

12 So, as Commissioner Duncan said today, we are  
13 presenting our findings on T-MSIS and our stakeholder  
14 interviews on our findings on children and youth with  
15 special health care needs on their transitions to adult  
16 Medicaid coverage.

17 And next slide.

18 All right. Well, I'll continue just giving an  
19 overview of what we'll be doing today until I get the  
20 permission to move the slides forward.

21 So today, we'll first start with a summary of the  
22 transitions to adult Medicaid coverage and how that

1 transition may overlap with other transitions, so the  
2 waiver transitions from a child-only to an adult waiver and  
3 the SSI age 18 redetermination. And then I'll go through  
4 our key findings from the T-MSIS interviews, and after  
5 presenting those findings, we'll pause so that we'll allow  
6 for technical questions and discussion of the findings.  
7 Discussion of these findings is also welcome at the end  
8 after our interview findings, but we wanted to set aside  
9 some dedicated time for those findings. And then Ava will  
10 present our interview findings, and then we'll wrap up with  
11 next steps.

12 And next slide. Great

13 All right. So you might remember this figure  
14 from September, and it provides a high-level overview of  
15 the transition processes that we are looking at in this  
16 work, and so to begin, I'll start with the blue box on  
17 Medicaid eligibility. So, as this transition age  
18 beneficiary is transitioning to adult coverage, their  
19 Medicaid eligibility, starting in that box, they would go  
20 through the Medicaid redetermination, usually in advance of  
21 their 19th birthday. And states are first required to  
22 attempt to do the redetermination on the -- or ex parte

1 basis, and that eligibility is also determined -- could be  
2 affected by your SSI redetermination, and so for children  
3 who were SSI eligible as a child, they will go through an  
4 age 18 redetermination. And children who are not on SSI  
5 may be applying separately as an adult.

6 So, as a reminder, in September, we went through  
7 this in a lot more detail, but if you're in a 1634 state,  
8 SSI eligibility confers Medicaid eligibility, and so, if  
9 you are eligible for SSI, then you're automatically  
10 eligible for Medicaid. And so your redetermination that a  
11 state goes through, no action is needed by the state to  
12 complete your redetermination.

13 But in SSI criteria states, individuals apply  
14 separately to Medicaid, and so the state has to confirm  
15 your SSI eligibility for that ex parte redetermination.

16 And then in 209(b) states, SSI eligibility does  
17 not confer your Medicaid eligibility. So individuals apply  
18 separately to Medicaid, and a state would have to determine  
19 eligibility in the same manner that they would for all  
20 other individuals.

21 And then going to the green box, the waiver  
22 enrollment box, individuals may be enrolled in a child-only

1 waiver, and if they are, they may also be transitioning to  
2 an adult waiver. And child waivers have varying age  
3 limits. So this process may or may not overlap with the  
4 Medicaid eligibility redetermination.

5 And the arrows between the waiver enrollment and  
6 the Medicaid eligibility just show that -- or are a  
7 reminder that you have to be Medicaid eligible to enroll in  
8 a waiver, and also, your waiver enrollment may confer your  
9 Medicaid eligibility in a specific eligibility pathway.

10 All right. So now I'll move on to our T-MSIS  
11 analysis. Just a little delay here on the slides. Now,  
12 it's caught up. Just a second. All right.

13 So I'll go through the methods first for  
14 analysis. So we know from prior research in our first  
15 phase of this work on transitions between pediatric and  
16 adult care that children and youth with special health care  
17 needs, their families, and caregivers can experience  
18 challenges with the transition to adult coverage. But  
19 there's little research specifically on the coverage  
20 outcomes of this transition, and so to address this gap, we  
21 examined coverage transitions for transition-age children  
22 and youth with special health care needs who are enrolled

1 in disability-related pathways using 2017 to 2019  
2 enrollment data from T-MSIS.

3 So for the analysis, we grouped these children  
4 enrolled in disability eligibility-related pathways into  
5 three groups: SSI-related pathways, so those who are  
6 current recipients of SSI; other SSI-related pathways, a  
7 much smaller group of beneficiaries who would be eligible  
8 for SSI but are not receiving for various reasons; and then  
9 other disability-related pathways, so other non-MAGI  
10 groups.

11 And then we also had three primary transition  
12 outcomes. One, we looked at those who remain continuously  
13 enrolled during this transition period, and then we looked  
14 at those who disenrolled during their transition age, so  
15 within 12 months of aging out, and if they reenrolled, then  
16 if they did reenroll within 12 months, and if they did  
17 reenroll within 12 months, that's the churn. And if they  
18 didn't re-enroll within the 12 months, then they are  
19 considered disenrolled.

20 All right. So, in this first table, we show the  
21 transition-age children and youth with special health care  
22 needs who remain continuously enrolled, who disenrolled,

1 and then who churned.

2 So, in the far left column, you see the different  
3 eligibility pathway groups with all disability-related at  
4 the top, the total, and then the second column, the number  
5 of transition-age children and youth with special health  
6 care needs, kind of the denominator identified. And then  
7 in the third column, the share who remained continuously  
8 enrolled during that transition period, so 82.4 percent,  
9 with variation among the three eligibility groups. And  
10 then the share who disenrolled, 17.6 percent, and then the  
11 share of those who disenrolled who churned. So of that  
12 17.6 percent, about a third, 33.9 percent, churned back  
13 onto Medicaid within 12 months.

14 So, in this figure here, this is a Sankey diagram  
15 that visualizes movement from child eligibility to adult  
16 eligibility pathways for those who remained continuously  
17 enrolled during this transition period.

18 In the left column, we see the three eligibility  
19 groups that we created and then the percentage of each of  
20 that group. So, for SSI-related, you see four percentages  
21 that each correspond with an adult eligibility pathway. So  
22 85.9 percent moved to the same pathway.

1                   And then in the right column, we see the adult  
2    eligibility pathways that they moved to as adults, and so  
3    you see the overall percentage for all children who  
4    remained continuously enrolled. So the majority ended up  
5    in the same pathway, 77.9 percent, and of those who were  
6    not in the same pathway, about half ended up in a MAGI  
7    pathway.

8                   This figure is very similar, but instead only  
9    shows those who churned. So, again, in the left column,  
10   you see the three eligibility pathways and the  
11   corresponding percentage who moved to each type of  
12   eligibility pathway as an adult, and unlike the other  
13   figure, which showed that the majority remained in the same  
14   pathway of those who churned, about half went to a MAGI  
15   pathway, and only 14.1 percent remained in the same  
16   eligibility pathway as they were as a child.

17                   Just waiting on the slide to move.

18                   So we also disaggregated our key outcomes by race  
19    and ethnicity groups, and so, each of -- oh, let's see. I  
20    skipped ahead too many. There we go. --by race and  
21    ethnicity. And so each of these columns shows the percent  
22    who continuously enrolled in dark blue, and then in light

1 blue, the percent that churned, and then in green, the  
2 percent that disenrolled. As you see that there's  
3 variation in the percent who remain continuously enrolled  
4 among race and ethnicity groups, ranging from 82.2 percent  
5 for Black non-Hispanic to 94.5 percent for Asian American  
6 Pacific Islander, the AAPI.

7 We also disaggregated key outcomes by states that  
8 had adopted different policies, state policies. Just  
9 waiting for the slide to move forward. So we disaggregated  
10 key outcomes by expansion and non-expansion state.

11 So, in this figure, again, in each bar graph, you  
12 see the percent who remain continuously enrolled, churned,  
13 or disenrolled, and so our findings show that continuous  
14 enrollment for both those enrolled in SSI-related pathways  
15 and those enrolled in other disability-related pathways was  
16 higher for those who were enrolled in expansion states  
17 compared to those enrolled in non-expansion states, so for  
18 SSI-related, 88.3 percent in expansion compared to 78.7  
19 percent in non-expansion.

20 Then we also measured transitions to the  
21 expansion pathways in states that had expanded Medicaid,  
22 and as we saw earlier, in those Sankey diagrams, a large

1 percentage moved to MAGI pathways, and so we wanted to dig  
2 in to understand which of those MAGI pathways were these  
3 individuals primarily transitioning to as adults.

4 So, in this figure, we see -- and to the left of  
5 the dotted line -- overall of those who were in all  
6 disability-related pathways and then in the right columns,  
7 broken out by SSI and other disability-related pathways.

8 So we see that 48.2 percent of those who churned re-  
9 enrolled in an expansion pathway, and of those who were  
10 continuously enrolled during this transition period, 13.1  
11 percent moved to an expansion pathway.

12 All right. So I know we just covered a lot of  
13 findings very quickly. I just wanted to summarize some of  
14 our key takeaways from the analysis.

15 The majority of children and youth with special  
16 health care needs remained continuously enrolled in  
17 Medicaid when they transitioned to adult Medicaid, so 82.4  
18 percent. However, as you saw across all of these figures,  
19 the percent who remained continuously enrolled varied by  
20 disability-related eligibility pathway that they were  
21 enrolled in as a child, differed by the beneficiary's race  
22 and ethnicity, and the beneficiary's enrollment state and

1 between states that had and had not adopted Medicaid  
2 expansion.

3 Also, the adult eligibility pathway that children  
4 and youth with special health care needs transitioned to  
5 differed between those who remained continuously enrolled  
6 and those who churned. So most of those who remained  
7 continuously enrolled remained in the same pathway, and  
8 then in contrast, the majority who churned moved to a MAGI  
9 pathway.

10 I'm just going to see if I can get my slides to  
11 advance.

12 All right. Well, I'll turn it back to the Vice  
13 Chair so that Commissioners can ask any technical questions  
14 about these findings, and then Ava will present the  
15 interview findings.

16 VICE CHAIR ROBERT DUNCAN: Thank you, Linn. I  
17 appreciate it very much.

18 So, Commissioners, Linn just shared a lot of data  
19 on what's taking place in the lives of these children that  
20 transition. Any questions, comments that you'd like to  
21 make on the findings?

22 Okay. I see Adrienne has her hand up and then

1 Mike.

2 COMMISSIONER ADRIENNE McFADDEN: Thanks, Linn, so  
3 much for this.

4 I do have just, hopefully, a quick question for  
5 you. I'm trying to sort of reconcile in my mind the  
6 individuals who are transitioning who are SSI eligible as a  
7 child but not as an adult. Is that mainly because of sort  
8 of an asset sort of issue or concern, or is there something  
9 else that's going on there, or did we see anything in the  
10 data to indicate what that might be?

11 LINN JENNINGS: Yeah, that's a great question.

12 I think there are a lot of reasons, and  
13 unfortunately, our T-MSIS data can't really get at kind of  
14 like the causality, but we do know from other work that in,  
15 I think, from SSI, like reports on the age 18  
16 redetermination, for SSI that about half are redetermined  
17 as adults if they were on as a child, and then a large  
18 percentage appeal and then are later back on SSI. But we  
19 don't really know if that is because of assets or income or  
20 if it's -- you know, the definitions change from being a  
21 child to an adult. So it's possible also that they aren't  
22 -- no longer eligible based on -- or like the medical

1 criteria, but unfortunately, with these data we can't  
2 really get at that.

3 CHAIR VERNON JOHNSON: Thank you, Adrienne.

4 Thank you, Linn.

5 Mike.

6 COMMISSIONER MICHAEL NARDONE: Hi. Can you hear  
7 me, Linn? Thanks for the analysis.

8 I just had a real technical question. I was  
9 wondering if you can maybe fill in for me the differences  
10 in those various categories, particularly, you know, who  
11 would be falling into the other disability-related pathway  
12 versus the SSI-related pathway. I mean, I clearly  
13 understand what SSI-related versus SSI pathway. I just  
14 want to understand that a little bit better in terms of  
15 maybe by examples of who might fit in one of those  
16 categories

17 LINN JENNINGS: Yeah. So for the SSI, as you  
18 said, right, there are specific SSI pathways for those who  
19 are current recipients. For the other SSI, they are kind  
20 of like other mandatory pathways that states have for  
21 individuals who may not meet SSI -- or they meet SSI  
22 medical or the criteria but may not meet asset or income.

1 They're very -- at least from our data, like, very small  
2 populations. So it's hard to say exactly what led to them  
3 being in that pathway versus an SSI, other than they're not  
4 SSI eligible at that time.

5 For the other disability-related pathways, it  
6 could be other -- there are other mandatory disability  
7 pathways or optional state pathways. I think also some of  
8 the Katie Beckett children may end up in that pathway  
9 potentially, and I would have to look back at our list.  
10 There are a lot of different pathways that kind of get  
11 combined into that, and so I'm happy to share that longer  
12 list if that would be helpful.

13 COMMISSIONER MICHAEL NARDONE: Sorry for my  
14 ignorance on this topic.

15 LINN JENNINGS: No, no.

16 COMMISSIONER MICHAEL NARDONE: I was trying to  
17 understand the other related was a fairly big category in  
18 terms of percentage. So I was trying to understand that,  
19 and I assume that when -- you know, I don't know if this --  
20 is this part of this analysis or a later point? I mean,  
21 one of the questions I guess that I have is, you know, as  
22 people -- if people are turning or moving to the MAGI

1 benefit package, does that mean that they potentially lose  
2 services because the benefit package is not as rich as the  
3 disability pathway? Is that something that we're -- I  
4 mean, that's -- that would be something I would be  
5 interested in understanding a little better as to -- they  
6 do have coverage, but is the -- are the services the same  
7 as they're moving to these different adult categories?

8 LINN JENNINGS: Thank you.

9 That's definitely something we can make sure to  
10 answer more in January.

11 I will note that I think some of that also is  
12 related to whether they're in a waiver and if they're able  
13 to transition to an adult waiver and maintain similar  
14 services that they had as a child to the adult pathway --  
15 or adult waiver, but we can definitely look into that as  
16 well for January.

17 COMMISSIONER MICHAEL NARDONE: Thank you, Linn.

18 Thank you, Ava.

19 VICE CHAIR ROBERT DUNCAN: Thank you, Mike.

20 Thank you, Linn.

21 Heidi, then April, Dennis, then Patty.

22 COMMISSIONER HEIDI ALLEN: Thank you so much for

1 this analysis. I really appreciated the churn, tracking  
2 the movement. That was super helpful.

3 I'm curious for the people who churned back in  
4 within 12 months, which looks like a considerable  
5 percentage. How long were they uninsured before they  
6 regained coverage, and did you see spikes? I mean, I know  
7 you haven't probably done this level of analysis, but I  
8 think it'd be interesting to see if you see spikes in  
9 utilization when they come back that demonstrate that they  
10 had gone without care that they needed during that period  
11 of uninsurance.

12 LINN JENNINGS: Yeah, we did look at time for the  
13 churn. So on average, it took about four months. I think  
14 it varied a little bit based on which pathway they moved to  
15 as an adult. I think it was a little bit longer for those  
16 who moved to MAGI pathways compared to those who maybe  
17 returned to the same pathway, but we didn't look into the  
18 utilization. But that's certainly something interesting to  
19 think about in the future.

20 COMMISSIONER APRIL HARTMAN: Thank you for your  
21 analysis. The question I had is, you know, I wondered how  
22 well we did with ex parte redeterminations. So as the

1 people who remained continuously enrolled, do we know what  
2 percentage of those were done by one of the ex parte ways  
3 they had of keeping them enrolled? I'm just wondering how  
4 much we learned and how well we did in that category.

5 LINN JENNINGS: That's a great question. As far  
6 as I know, we can't just really get that, whether they were  
7 able to remain enrolled because of ex parte, but that's  
8 certainly something we could go back and look into. We did  
9 look, and I can't remember if this was included in the  
10 materials or not, but differences between those who were in  
11 1634 SSI criteria, 209(b) states to see if there were  
12 differences in continuous enrollment. Among those states  
13 there wasn't much variation between states with those  
14 different types of SSI Medicaid determinations.

15 VICE CHAIR ROBERT DUNCAN: Thank you. Dennis.

16 COMMISSIONER DENNIS HEAPHY: Thanks. My question  
17 is built on some comments made earlier. I'm thinking of  
18 you've got Kid A in one state and Kid B in another state,  
19 and they have the same challenges, the same needs. So what  
20 more information do you think you can get to us about the  
21 Social Security information, like what's causing that churn  
22 for those kids? What's causing the churn in that

1 population, and what's enabling those folks to go back into  
2 Medicaid after the churn period? Like how do we reduce the  
3 churn for that population of kids, because the SSI data is  
4 kind of frustrating, that we really can't get more  
5 information on it, unless you think you can.

6 LINDA JENNINGS: Thank you for that question.

7 We'll have to go back and see if we can get more on the SSI  
8 side. I will say that I don't want to get ahead too much  
9 of what Ava will be presenting on the interview findings.

10 COMMISSIONER DENNIS HEAPHY: Right.

11 LINDA JENNINGS: I think the interview findings  
12 actually complement these quite well, and I guess having a  
13 kind of mixed methods approach of getting at some of those  
14 qualitative questions. So I'll let Ava get to that later.

15 COMMISSIONER DENNIS HEAPHY: And then there's  
16 nothing more you can provide us about the disproportion of  
17 folks who are Black and Hispanic and their experiences.

18 LINDA JENNINGS: Yeah. Right. And I think kind  
19 of understanding, I guess, the reasons why there is some  
20 variation in the materials. We did the breakout by race  
21 and ethnicity so that you can look at those who were in  
22 SSI-related pathways or disability. But beyond that,

1 again, the data can't help us get an understanding why  
2 there are those differences.

3 COMMISSIONER DENNIS HEAPHY: Thanks.

4 VICE CHAIR ROBERT DUNCAN: Thank you, Dennis.

5 All right, Patti.

6 CHAIR VERLON JOHNSON: I've got Patti's question,  
7 since she lost her voice. She wants to know could we dig  
8 deeper to learn more about what works and perhaps look at  
9 states with lower rates to learn what didn't work.

10 LINN JENNINGS: Thank you for that.

11 COMMISSIONER PATTI KILLINGSWORTH: And it may  
12 help to just read the first part.

13 CHAIR VERLON JOHNSON: Oh, I see the first part.  
14 I'm sorry.

15 COMMISSIONER PATTI KILLINGSWORTH: Sorry. Sorry.

16 CHAIR VERLON JOHNSON: Everyone out there sees  
17 us, this is a little bit different for us. Okay. So she  
18 says as it relates to the T-MSIS findings, "I'm stuck by  
19 the significant variation among states. There are several  
20 with rates of 90 percent plus retaining eligibility.

21 Kentucky particularly had a high rate with 0 percent churn.  
22 Do we have any sense of how these states approach these

1 redeterminations in ways that help children to retain  
2 eligibility?" And then she wants to go deeper to learn  
3 more about what works and didn't work. So that probably  
4 puts it in context.

5 COMMISSIONER PATTI KILLINGSWORTH: Thank you.

6 CHAIR VERNON JOHNSON: Thank you, Patti.

7 LINN JENNINGS: Yeah, thank you for that  
8 question, and I guess in our interviews we did speak with  
9 states, so I'll let Ava speak to that once we get to the  
10 interview findings, and we'll make note to kind of look  
11 into that a little bit more.

12 CHAIR VERNON JOHNSON: Thank you.

13 VICE CHAIR ROBERT DUNCAN: All right. Any other  
14 questions, technical aspects you'd like to know?

15 [No response.]

16 VICE CHAIR ROBERT DUNCAN: All right. Seeing  
17 none, as Linn teed up, we will move to Ava. She'll talk  
18 about the interview findings, and we can see where these  
19 match up or where there may be some discrepancies in what  
20 the data shows and what the interviews say. So Ava, take  
21 it away.

22 **### CYSHCN TRANSITIONS TO ADULT COVERAGE: INTERVIEW**

1                   **FINDINGS**

2       \*           AVA WILLIAMS: Thank you. Good morning,  
3       Commissioners. And we're going to do something a little  
4       different the slides, I'll be saying "Next slide" for  
5       someone else to advance it for me.

6                   In the next section I will go over the  
7       stakeholder interview findings. This section is broken up  
8       into factors that affect Medicaid coverage transitions and  
9       facts that affect 1915(c) transitions. As a reminder, we  
10      conducted interviews with national experts, federal and  
11      state Medicaid officials, as well as national and state  
12      level advocacy organizations, and the goal of our  
13      interviews was to understand how state Medicaid agencies  
14      operationalize their eligibility and redetermination  
15      policies as well as how they align with age 18 SSI  
16      redeterminations and how states operationalize their waiver  
17      policies, and any challenges beneficiaries experience with  
18      either transition.

19                  From our interviews we identified six key factors  
20      that affect the transition to adult Medicaid. In this  
21      figure we have organized them by those related to the  
22      Medicaid redetermination process and those related to state

1 policy choices. In the next few slides I will explain each  
2 factor in more detail.

3 States are required to redetermine beneficiaries  
4 on an *ex parte* basis, using available information before  
5 requesting additional information from the individual.

6 State officials and national experts describe challenges  
7 with conducting *ex parte* for beneficiaries who are enrolled  
8 in a disability pathway or changing between eligibility  
9 groups. The reasons for these challenges include  
10 insufficient data from the Social Security Administration,  
11 such as lack of income or asset information, and some  
12 states have separate MAGI and non-MAGI eligibility systems,  
13 and their non-MAGI system may be outdated and unable to  
14 support *ex parte* renewals.

15 Next, as Linn discussed earlier, the outcomes of  
16 the SSI redetermination have an effect on beneficiaries'  
17 Medicaid eligibility. So if a beneficiary is enrolled in  
18 SSI as a child and remains enrolled as an adult, then they  
19 often do not experience any changes to their eligibility  
20 pathway. On the other hand, if a beneficiary is no longer  
21 eligible for SSI as an adult, they will need to be  
22 redetermined for a different pathway.

1                   In SSI criteria and 209(b) states, where  
2    beneficiaries have to submit a separate Medicaid  
3    application, the state may have enough information to  
4    complete a redetermination. However, in 1634 states, the  
5    Medicaid agency may not have enough information, and the  
6    beneficiary may need to provide additional information to  
7    maintain coverage.

8                   State Medicaid agencies are required to send  
9    beneficiaries notices related to their upcoming age 19  
10   redeterminations, but there are no federal requirements  
11   related to how far in advance the notice should be sent if  
12   the beneficiary is required to send additional information.  
13   States shared that they send notices 60 days to 3 weeks in  
14   advance of the end of the eligible period. Advocates  
15   shared that beneficiaries may receive a notice too late to  
16   respond, after the deadline, or do not receive the notice  
17   at all, and noted that these notices may lack clarity on  
18   what steps are needed. If a beneficiary does not send the  
19   requested information in a timely manner, this can lead to  
20   a delay in their redetermination or termination of  
21   coverage.

22                  Next, beneficiaries can receive support with

1 Medicaid and SSI redeterminations from a state Medicaid  
2 agency, managed care organizations, waiver case managers,  
3 and community-based organizations. However, the amount of  
4 support a beneficiary receives can vary depending on the  
5 entity providing the support and may not be sufficient to  
6 facilitate a smooth transition.

7 For example, beneficiaries enrolled in a waiver  
8 are assigned a case manager to help with waiver transitions  
9 as well as Medicaid and SSI transitions, but it is unclear  
10 if beneficiaries not enrolled in a waiver receive any  
11 dedicated support.

12 There are mandatory and optional adult  
13 eligibility pathways that states can choose to cover, and  
14 the available adult eligibility pathways in a state can  
15 affect a beneficiary's ability to remain enrolled in  
16 Medicaid as an adult, especially if they are not eligible  
17 for SSI as an adult. For example, beneficiaries who either  
18 were not enrolled in SSI as a child or are no longer  
19 eligible for SSI as an adult will need to transition to a  
20 different eligibility pathway to maintain coverage as an  
21 adult. As you saw on the T-MSIS findings, many of those  
22 that transition to a different pathway as an adult move to

1 a MAGI pathway.

2 States have the option to extend child  
3 eligibility through a state plan option, which four states  
4 have done. One state has also extended child eligibility  
5 for children and youth with special health care needs  
6 through an 1115 demonstration. We hear in stakeholder  
7 interviews that extending the child eligibility can help  
8 ease the transition process by delaying the coverage  
9 transition until after many other transitions are complete.

10 Next, I will go over the factors that affect  
11 1915(c) HCBS waiver transitions. This figure organizes the  
12 factors by those related to the state Medicaid waiver  
13 transition process and state Medicaid waiver policy  
14 choices.

15 States are required to have transition planning  
16 procedures for age-limited waivers, but there is variation  
17 in the robustness of transition planning across waivers and  
18 the support received from case managers. Advocates shared  
19 that case managers are not always knowledgeable or  
20 proactive about waiver transitions, and transition planning  
21 may be insufficient to facilitate smooth transitions,  
22 leading to delays in waiver transitions.

1                   When transitioning waivers, beneficiaries need to  
2                   complete a functional and level-of-care assessment, but  
3                   they can experience challenges with both of these.  
4                   Advocates shared that case managers do not always inform  
5                   beneficiaries about the need to complete the assessments in  
6                   a timely manner, and this can lead to a gap in waiver  
7                   enrollment.

8                   States have the flexibility to design their HCBS  
9                   waiver programs to support transitions between child and  
10                  adult waivers. For example, one state designed their  
11                  corresponding child and adult waivers to overlap in age  
12                  requirements to give beneficiaries more time to transition  
13                  at a time when they may be navigating multiple transitions.  
14                  Some states have reserved capacity for youth aging out of  
15                  age-limited waivers to ease transitions between child and  
16                  adult waivers. Advocates noted that reserved capacity  
17                  works well and helps beneficiaries maintain needed waiver  
18                  enrollment and services.

19                  Lastly, many states have waitlists for their  
20                  adult and all-ages waivers, which can lead to delays in  
21                  transitioning from a child to an adult waiver, receiving  
22                  waiver services, and may affect their Medicaid coverage.

1                   Our findings show that state Medicaid programs  
2                   have a number of flexibilities related to eligibility  
3                   redetermination process, including covering optional  
4                   eligibility groups and how they operationalize their waiver  
5                   programs. In our state interviews we heard many examples  
6                   of how states have implemented these flexibility to improve  
7                   transitions to adult Medicaid and support children and  
8                   youth with special health care needs and their families  
9                   with navigating these processes.

10                  Additionally, findings from our T-MSIS analysis  
11                  indicate that the majority of children transition to adult  
12                  Medicaid coverage without experiencing a gap in coverage.  
13                  However, our research also identified that even with state  
14                  flexibilities, some children with disabilities do  
15                  experience challenges with the transition to adult Medicaid  
16                  coverage process and may lose or have a gap in their  
17                  coverage.

18                  In this last section I will summarize the key  
19                  challenges identified in our work and highlight some of the  
20                  policies that states have implemented to address these  
21                  challenges.

22                  Research indicates that the SSI application and

1 redetermination process can be challenging for individuals,  
2 and many Medicaid beneficiaries are not eligible for SSI as  
3 adults, even if they were as children. One reason for this  
4 is the adult disability and financial criteria are  
5 different than the child criteria. Additionally,  
6 individuals may meet the adult disability criteria but they  
7 may not meet the income and asset limits. If a beneficiary  
8 is no longer eligible for SSI as an adult, states will  
9 redetermine them on all bases before terminating coverage.

10 As mentioned earlier, there are mandatory and  
11 optional adult eligibility pathways, and states have the  
12 flexibility to determine which optional eligibility  
13 pathways they offer. Depending on the optional eligibility  
14 pathways available in a state, young adults who lose SSI or  
15 those who are not enrolled as a child may or may not be  
16 able to remain enrolled in Medicaid as an adult.

17 One of the optional pathways that states can  
18 cover is expansion pathway. Our work shows that the  
19 expansion eligibility pathway is one of the pathways that  
20 many children with disabilities transition to if they  
21 remain Medicaid covered as an adult.

22 Medicaid covered transition aged children and

1 youth with special health care needs and their families may  
2 experience gaps in coverage because of challenges with  
3 navigating multiple, simultaneous, or near-simultaneous  
4 transitions. The main challenges beneficiaries experience  
5 include not receiving sufficient support or advanced notice  
6 about the Medicaid redetermination and transition process  
7 and not having sufficient time to complete all simultaneous  
8 transitions during the given timelines.

9 States have implemented policies to reduce  
10 beneficiary burden with the transition to adult Medicaid,  
11 such as sending notices in advance of upcoming  
12 redeterminations, extending child Medicaid eligibility for  
13 young adults to age 21 and 26, and assigning case managers  
14 to children and youth with special health care needs to  
15 support transition planning.

16 For example, states and advocates shared that  
17 extending child eligibility to those over age 19 is helpful  
18 because it provides beneficiaries with additional time to  
19 navigate their multiple transitions and maintain coverage  
20 into young adulthood.

21 Beneficiaries experience challenges with  
22 understanding these notices they receive from Medicaid and

1 SSA about the changes to their SSI eligibility and how it  
2 affects their Medicaid eligibility. There are no federal  
3 requirements for Medicaid and SSA to coordinate or combine  
4 notices related to changes in SSI eligibility and how it  
5 affects Medicaid eligibility. SSA sends notices about  
6 changes to SSI eligibility, and these notices may include  
7 information that says changes to SSI can affect Medicaid  
8 eligibility as well as to contact the state Medicaid agency  
9 for more information.

10 There is no requirement for Medicaid to notify  
11 the beneficiary about their change in SSI eligibility. The  
12 individual would only receive a notice from Medicaid if  
13 additional information is needed to complete the  
14 redetermination that is triggered by the change in  
15 circumstance.

16 Overall, advocates describe these notices as  
17 confusing and difficult to understand and raise the  
18 importance of improving these notices to facilitate  
19 beneficiary and family understanding of how to maintain  
20 Medicaid coverage, regardless of SSI eligibility.

21 Thanks for listening to our presentations today.  
22 Now the staff would welcome Commissioner feedback on any

1 outstanding questions about the T-MSIS analysis and  
2 interview findings, if the evidence presented supports any  
3 federal or state policy changes, and are there other  
4 factors that staff should consider when developing policy  
5 options. Staff will return in January to present potential  
6 policy options.

7 And now I will turn it back to the Vice Chair.

8 VICE CHAIR ROBERT DUNCAN: Thank you, Ava. And  
9 Linn and Ava, thank you so much for today's information,  
10 both the T-MSIS data information and interview findings so  
11 we can see parallels and then also opportunities. So I  
12 will open it up to questions from the Commissioners, and  
13 I've got Jami first.

14 COMMISSIONER JAMI SNYDER: Thanks, Linn and Ava  
15 for your work on this topic. I'm curious to learn a little  
16 bit more about those five states that have extended child  
17 eligibility. To me that seems like a best practice. And  
18 I'd love to know more about what the transition process  
19 looks like in those states, so we could better understand  
20 the benefit of extending eligibility.

21 AVA WILLIAMS: Yes. Are you asking for the  
22 specific names of the states, because I can give that to

1 you?

2 COMMISSIONER JAMI SNYDER: Oh, that would be  
3 great.

4 AVA WILLIAMS: The District of Columbia,  
5 Massachusetts, Maine, and Florida have extended child  
6 eligibility up to age 21 through a state plan option, and  
7 then Oregon has extended childhood eligibility for children  
8 and youth with special health care needs up to age 26,  
9 through an 1115.

10 COMMISSIONER JAMI SNYDER: Yeah, I would just  
11 love it if we could reengage with those states and talk  
12 more about kind of, again, what the process looks like,  
13 given that they have additional time to work with members  
14 around that transition.

15 AVA WILLIAMS: Yes, I think that's a great  
16 question. I guess we did talk to Oregon, and they did  
17 explain that their 1115 is working well, but we would still  
18 need to do more evaluation.

19 VICE CHAIR ROBERT DUNCAN: Thank you, Ava. Thank  
20 you, Jami. All right. Patti via Madam Chairwoman.

21 COMMISSIONER PATTI KILLINGSWORTH: I'm going to  
22 give this a shot, and if you can't hear me, you can just

1 let me know and I'll pivot. I just have some thoughts  
2 about potential actions that we might consider in the  
3 recommendations coming up. You talked, Ava, about  
4 notifications, and I think requiring that those  
5 notifications are happening earlier, that parents are aware  
6 of this transition pretty early on, and that there are  
7 early and repetitive notification processes, and that we  
8 use a variety of ways of doing that, not just sort of  
9 mailing a letter and saying, "Hey, we told them."

10 I think that states could be required to  
11 designate some entity that would assist the parents in  
12 helping that youth transition to adult eligibility, and  
13 that could be a health plan, it could be a waiver manager,  
14 it could be some sort of community-based organization.  
15 Lots of options, really leaving that up to states, but  
16 saying hey, these are families who are dealing with a lot,  
17 and they really need support in navigating this process.

18 Around the notices, surely, by this time, there  
19 are some template or sample notices that have been tested  
20 in the population that could be made available. Again,  
21 states maybe could tailor those to their own unique  
22 programs and eligibility categories. But just knowing that

1 something has been tested to actually be understandable to  
2 the population and always available in their primary  
3 language.

4 And then for kids who are in the 1915(c) waivers,  
5 while there is a requirement for transition plans, I don't  
6 think that there are any specific parameters for those  
7 transition plans. So in this instance it would be helpful  
8 if CMS would require really clear processes for how the  
9 state is going to assist those youth and their families in  
10 navigating that transition from child to adult categories  
11 of eligibility.

12 VICE CHAIR ROBERT DUNCAN: Thank you, Patti, and  
13 we heard you well. Ava, did you capture that. Okay. I  
14 wanted to make sure. All right, Commissioner Ingram.

15 COMMISSIONER CAROLYN INGRAM: Thank you, and I  
16 just wanted to expand on what Patti brought up to also ask  
17 if we could think about considerations for tribal members  
18 and people living in rural communities who don't  
19 necessarily always get access to this type of information  
20 and know about what they have to go through in terms of  
21 transitions. And especially dealing with people who may  
22 have different forums where they access care in tribal

1   communities. So thank you.

2                   VICE CHAIR ROBERT DUNCAN: Thank you, Carolyn.

3                   COMMISSIONER CAROLYN INGRAM: And happy to expand  
4   on that offline if we need to about how that works.

5   Thanks.

6                   VICE CHAIR ROBERT DUNCAN: Thank you. All right.

7   John, then Dennis.

8                   COMMISSIONER JOHN MCCARTHY: So I was trying to  
9   look at to see if there were any patterns in that data,  
10   state by state, and the interviews are very helpful to hear  
11   kind of anecdotal information on that. But trying to dig  
12   into that state by state. I know somebody already asked  
13   earlier if we could dig into that a little more. And one  
14   of the pattern I did see generally is that non-expansion  
15   states have higher percentages of people who don't come in  
16   after 12 months, which makes sense because a number of the  
17   people in the other states go into the MAGI group. So is  
18   that one of the reasons for it? Is it something to do with  
19   childhood eligibility versus, you know, there's not that  
20   eligibility group later on.

21                  So if we could just, you know, whenever we ask  
22   you for data, you give us data. It's great. But then we

1 ask you for the next step on it. So I think that's really  
2 my request, is can we dig into some of those states that  
3 are doing really well and some of the states that aren't  
4 doing as well, and some of the ones in the middle, too.  
5 Like Illinois, for example, is an expansion state, has a  
6 high disenrollment rate, but then a fairly high rate of  
7 bringing people back on. Maybe that's an example of some  
8 of the things we were just talking about when you're  
9 looking at communication and some other things.

10 So if we could pick a few of those states and  
11 really dive into it to see what's working or not working, I  
12 think that would be helpful in trying to tease out how much  
13 of it is actually just an eligibility issue, you know,  
14 versus an operations issue.

15 AVA WILLIAMS: I can give you some context about  
16 the expansion pathway for these individuals. In our state  
17 interviews the states that we talked to that were expansion  
18 states, they described that the expansion pathway can be  
19 very helpful, especially for beneficiaries who may be going  
20 through an SSI redetermination, because for various reasons  
21 those redeterminations can take a long time, or be very  
22 complicated, or they may be denied the first time, et

1 cetera. So the expansion pathway is a way for these  
2 beneficiaries to remain enrolled in Medicaid while they are  
3 also going through other transitions such as SSI.

4 VICE CHAIR ROBERT DUNCAN: Thank you, John.

5 Thank you, Ava. Dennis, then Adrienne, then Sonja, and  
6 Heidi.

7 COMMISSIONER DENNIS HEAPHY: Might it be possible  
8 for CMS to require states to work with the Social Security  
9 Administration to better coordinate the notices that go to  
10 folks as they are doing this transition? Would that be  
11 within the scope of something CMS can do? Because it seems  
12 that, building on what was said earlier about there is a  
13 real need for having templates and timelines and model  
14 notices available to folks. And it would also seem that if  
15 there was better coordination between Social Security  
16 Administration and the Medicaid offices, that also would  
17 decrease churn. Thanks.

18 VICE CHAIR ROBERT DUNCAN: Thank you, Dennis.

19 Adrienne.

20 COMMISSIONER ADRIENNE MCFADDEN: Thank you, and  
21 Ava, thanks for that additional context around sort of the  
22 expansion sort of use of the transition opportunity. But I

1 think what I'm interested in, and I think Heidi brought  
2 this up earlier in the churn sort of population, is whether  
3 or not they were uninsured or if something else was  
4 happening in the time between them sort of initially having  
5 eligibility, then dropping off, and then coming back on  
6 within 12 months.

7 I'm also interested in understanding the detail  
8 on those who don't return. I think the assumption is they  
9 are either uninsured or they find some other health  
10 coverage. But I really would like to know what percentage  
11 is what.

12 And then the last thing I'll say is I think I'm  
13 really interested in sort of minding the gap in sort of  
14 effective transitions. And so I would echo sort of the  
15 sentiments in understanding the states that are doing this  
16 really well, not just in continuing coverage but making  
17 sure that the coverage from sort of childhood to adulthood  
18 and making sure that the providers that they are utilizing  
19 are the ones that they need, so it's not just coverage in  
20 name but also getting the actual services that they need.

21 LINN JENNINGS: I do want to note one thing on  
22 your question on where individuals go if they disenroll.

1 Unfortunately, with the T-MSIS data, we can't see where  
2 they go. But in our 2021 analysis we were able to link  
3 with exchange data, and we know from that analysis that  
4 somewhere between 1.6 and 3.3 percent of children,  
5 depending on eligibility pathway, moved to the exchange,  
6 and then we don't have any other way of kind of identifying  
7 if they moved to dependent coverage or ESI in various  
8 places. But I just wanted to provide that context from  
9 that earlier work, that we at least know not a lot, at  
10 least at that time, or in this time period, were moving to  
11 the exchange.

12 VICE CHAIR ROBERT DUNCAN: Thanks, Linn, for the  
13 clarification. All right Sonja, Heidi, then Mike.

14 COMMISSIONER SONJA BJORK: Thanks. I was  
15 wondering for Ava, in the interviews did anything come up  
16 about reimbursement methods for the work it takes to help  
17 somebody navigate eligibility? So I mean, reimbursement  
18 for case management activity or a community health worker.  
19 And was that something that helped in any of the states in  
20 terms of, you know, a lot of this is just basic hard work.  
21 You know, you have to help somebody interpret all the  
22 different rules, help them fill out the right applications,

1 meet deadlines, provide documents. And if there is a  
2 reimbursement method for that type of work, I was just  
3 wondering if any of the states were experimenting with that  
4 and seeing if that helped people keep their eligibility who  
5 are eligible. Thanks.

6 AVA WILLIAMS: That's a great question. And  
7 correct me if I'm wrong, but I don't remember states or  
8 advocates speaking specifically about reimbursement rates.  
9 And we definitely had conversations about workforce and the  
10 workforce issues, if workforce is going well what that  
11 means for the beneficiaries. But nothing specific to  
12 reimbursement. I think we heard that more in our care work  
13 about reimbursement, but not specifically in this coverage  
14 piece. But, Linn, correct me if I'm wrong.

15 VICE CHAIR ROBERT DUNCAN: All right. Thank you.  
16 Heidi.

17 COMMISSIONER HEIDI ALLEN: So I just keep coming  
18 back to something that has been mentioned a couple of  
19 times, which is all of these transitions that are happening  
20 to these kids at the same time, often leaving school, and  
21 the structure that that provides and the support that that  
22 provides. And recognizing that your analysis includes

1 people that are coming off at different ages, some at 19,  
2 some at 21, some at 26, I'm wondering if there is evidence  
3 that there is less churn when you come off at an older age,  
4 when it's not coinciding with the same age that you leave  
5 high school. Because it kind of would support that  
6 argument, that it is a lot of administrative and  
7 bureaucratic things to navigate at the same time.

8                   And the other thing is, I realize that we are  
9 trying to start looking at policy recommendations in  
10 January, but I really would be interested to know if the  
11 people who come back on, particularly back into the SSI  
12 pathways, if they have emergency department or  
13 hospitalizations in that first six months. Just wondering  
14 if some of the people are getting back on because they go  
15 into a hospital, and a hospital helps them navigate it.  
16 And also because that would just be such a flag for unmet  
17 need and concern. So I don't know how difficult or easy it  
18 is.

19                   And then thinking back to Adrienne's question  
20 about where do people go, you know, I know that is kind of  
21 beyond our capacity and scope, but I really hope that some  
22 of these states that have all-payer claims data might have

1 an opportunity to look more deeply into that, to see if  
2 they can track people into different types of coverage  
3 after they leave Medicaid.

4 Anyway, thank you.

5 VICE CHAIR ROBERT DUNCAN: Thank you, Heidi.

6 Mike?

7 COMMISSIONER MICHAEL NARDONE: Yes. I wanted to  
8 just echo my support for kind of better understanding and  
9 also looking at the recommendations around better  
10 coordination between SSA and Medicaid around those notices.  
11 That just doesn't really seem to be -- if people are  
12 getting those notices late, that is, like, something that  
13 we should be able to take care of administratively, and if  
14 it helps with those transitions for SSI, I think we should  
15 be on the record with respect to that.

16 I also want to maybe understand a little bit  
17 better in kind of putting the data together from both the  
18 looking at the data that you presented, Linn, earlier and  
19 maybe understand better from the focus groups and the  
20 interviews. It seems like a lot of the people who are  
21 falling off are those people in that other disability-  
22 related category. The SSI related -- or the SSI is

1 actually less, seems to be less of a churn off of Medicaid.  
2 It's really that other disability-related category, so  
3 trying to understand that a little bit better and whether  
4 or not anything came up around what the barriers are there.  
5 Is it -- kind of understanding that so that could maybe  
6 inform what recommendations we might want to make, is it a  
7 question of in those categories, you know, those are people  
8 who are in a child waiver and they're not making the  
9 transition to the adult waiver, and that's what's happening  
10 there? Or is there some other factors that are leading to  
11 that lower percentage that maybe we should be looking at  
12 for potential recommendation?

13 VICE CHAIR ROBERT DUNCAN: Thanks, Mike.

14 Dennis.

15 COMMISSIONER DENNIS HEAPHY: Just a question.

16 Linn, do you think we should be looking more deeply into  
17 asking questions about waiting lists, folks who are on  
18 waiting lists and the impact that has on this population,  
19 or is that totally separate? Because it's in the report,  
20 in the memo. So I'm curious if we're missing something  
21 there -- or Ava.

22 AVA WILLIAMS: Yeah, we talk to states about

1    their waiting lists. We talk to states who have longer  
2    waiting lists, less waiting lists, shorter waiting lists.  
3    I guess I'm trying to think about the information that we  
4    heard and how to best answer your question. I guess some  
5    context I can give at least for this population, especially  
6    in states that have long waiting lists, many beneficiaries  
7    and advocates tell beneficiaries to get on these waiting  
8    lists as early as possible, even as a youth. So, when they  
9    are ready to age out of the child waiver, there could be an  
10   opening for adult waiver.

11                    COMMISSIONER DENNIS HEAPHY: And so do we have a  
12   sense of the impact of churn on those folks who maybe get  
13   further delayed on waiting lists because they lose their  
14   Medicaid for a year or six months?

15                    LINN JENNINGS: From the data, we didn't link --  
16   so one of the challenges -- and we did look at some of the  
17   waiver data in T-MSIS, but one of the limitations is that  
18   we can't really distinguish between specific 1915(c)  
19   waivers in T-MSIS. And so we can't really see if they're  
20   on a child-only or an all-ages waiver as a child, and  
21   there's no way to kind of see if someone may be on a wait  
22   list for a waiver. So there are some data limitations

1 there.

2 I think, as Ava said, we heard a lot about wait  
3 lists in our interviews. I think there were a couple of  
4 states -- and Ava maybe can elaborate more on this -- where  
5 they shared that if they were on a child waiver and they  
6 were unable to get on an adult waiver, some of the waivers  
7 would allow them to just remain on the waiver until they  
8 could move. So there were a number of different ways that  
9 states tried to kind of limit any sort of gap by either  
10 extending the child waiver or, as Ava said, getting on a  
11 wait list early on.

12 But I'll let Ava add anything.

13 AVA WILLIAMS: Yeah. And one more thing, I  
14 guess, I would give a context. We heard from states, or  
15 one state -- I think it's states -- that beneficiaries who  
16 are on wait lists but are still Medicaid eligible are still  
17 receiving services through Medicaid. They are just not  
18 enrolled in the waiver or getting waiver services.

19 COMMISSIONER DENNIS HEAPHY: Okay. Thank you.

20 Do you think that's something we need to look further at,  
21 more deeply at, as we go on as a Commission, is other folks  
22 on waiting lists and the impact on access to services or

1 medical utilization or something over time, ED use or  
2 hospitalization use, and what best practices states have in  
3 reducing waiting lists? Because it's a large issue for  
4 people, but thanks.

5 VICE CHAIR ROBERT DUNCAN: Thank you, Dennis.

6 Commissioners, any other questions or thoughts  
7 around policy?

8 [No response.]

9 VICE CHAIR ROBERT DUNCAN: Seeing none, again,  
10 Ava, Linn, I want to thank you so much for the amazing work  
11 that you've been doing on this. As I highlighted earlier,  
12 I think having the data, going through that and seeing what  
13 that showed, and then interview panelists, information  
14 along that is very helpful.

15 Do you feel like you've got what you need for  
16 next steps in January?

17 All right. Thank you very much.

18 And with that, I'll turn it over to Madam  
19 Chairwoman to go to public comments.

20 CHAIR VERNON JOHNSON: Thank you. Thank you so  
21 much.

22 Actually, before we open the floor for public

1 comment, I just want to take a moment to highlight a recent  
2 publication that MACPAC released, certainly with MedPAC,  
3 which, of course, is the Medicare Payment Advisory  
4 Commission. Together, we do this every year. We published  
5 the 2025 edition of the duals data book, which really  
6 compiles information on individuals dually eligible for  
7 Medicare and Medicaid in calendar year for this time, year  
8 2022.

9 So this annual publication presents some key  
10 statistics that will be helpful. It will tell you about  
11 dually eligible beneficiaries who qualify for both programs  
12 by virtue of age or disability and low income. And so some  
13 of the early statistics that we can tell you about from the  
14 highlights of the book is that there were 13.6 million  
15 dually eligible in our country. Although this is a very  
16 small number, a share of the Medicaid population, about 13  
17 percent, they actually account, of course, for 27 percent  
18 of all Medicaid spending.

19 Previous editions have documented a very steady  
20 shift toward managed care among duals, and that trend we  
21 found in this year also continues.

22 So, as of 2022, about three-fourths of full-

1 benefit duals were enrolled in some type of Medicaid  
2 managed care plan during the year, and nearly one-third  
3 spent at least one month simultaneously enrolled in both  
4 Medicare managed care and a comprehensive Medicaid managed  
5 care plan.

6 To better understand service use and spending  
7 among this population, we actually, for this year, included  
8 two new exhibits focused on full-benefit duals enrolled in  
9 comprehensive Medicaid managed care, and this new analysis  
10 showed that full-benefit duals under age 65 had lower use  
11 of Medicaid-covered institutional LTSS and lower LTSS  
12 expenditures than those who are age 65 and older.

13 We also found that a majority of full-benefit  
14 duals in comprehensive Medicaid managed care used no  
15 Medicaid LTSS at all.

16 So we do hope that this data book continues to  
17 support a very clear and more comprehensive picture of  
18 program spending, enrollment, and diverse experiences of  
19 our dual eligible population.

20 You can, of course, get this information at  
21 MACPAC.gov, and we encourage you to do that, and gift it  
22 all during this holiday season to your friends and family

1 as well.

2 So, with that, we will open the floor for public  
3 comment. So, to do this, we're going to invite people in  
4 the audience to raise your hand if you would like to offer  
5 comments. We do ask that you introduce yourself and the  
6 organization you represent, and we also ask that you keep  
7 your comments to three minutes or less, if you can, please.

8 So, with that, let's go to comment.

9 VICE CHAIR ROBERT DUNCAN: We've got Peggy  
10 McManus.

11 CHAIR VERLON JOHNSON: All right. So, Peggy, the  
12 floor is yours.

13 **### PUBLIC COMMENT**

14 \* PEGGY McMANUS: Thanks so much.

15 I'm Peggy McManus, and I co-direct Got  
16 Transition, which is the national resource center on health  
17 care transition. And great congratulations to Linn and Ava  
18 and all of you for shining the light on not only  
19 transitions in care, but transitions of coverage.

20 My comments -- or the first one is around taking  
21 greater advantage of EPSDT in terms of informing young  
22 people about the changes in coverage well before they no

1 longer are eligible for EPSDT, and also for trying to  
2 ensure that they have their current medical documentation.  
3 So often that they're getting rejected because they don't  
4 have current information and can't access it. I  
5 appreciated the comment about using targeted case  
6 management.

7 The second comment I had would be to think about  
8 policy research on the impacts of benefit changes on access  
9 and health outcomes, including family caregiver  
10 responsibilities. Again, from our work, we hear a great  
11 deal about what this loss of benefits means in terms of  
12 services.

13 The other comment I have is around definition of  
14 disability going forward. There's so many limits around  
15 just using waiver and SSI disability definitions, and how  
16 can we think more broadly about a more inclusive definition  
17 and more consistently.

18 Finally, I'd be very interested to know about the  
19 characteristics of Medicaid-insured youth that were  
20 previously Medicaid-insured but became uninsured beyond the  
21 four months. Who are they? And, you know, it's a sad  
22 story that that's happening.

1                   So, again, thank you.

2                   CHAIR VERNON JOHNSON: All right. Thank you,  
3 Peggy, for your comments.

4                   Next up, we have Amy Clawson. The floor is  
5 yours.

6                   AMY CLAWSON: Hello. Can you hear me?

7                   CHAIR VERNON JOHNSON: We can hear you, Amy.  
8 Thank you.

9                   AMY CLAWSON: Oh, good. Okay.

10                  As a first-timer here on the call today, I just  
11 echo what the previous speaker said. This information is  
12 so helpful to know that you're all working so hard for our  
13 children and adults with special health care needs on a  
14 national level.

15                  I'm Amy Clawson. I'm the program coordinator for  
16 Ohio Family-to-Family, and we are one of the lucky states  
17 to have a very strong relationship with our Ohio Medicaid  
18 partners. And they're open to hearing all about children  
19 and youth who especially lose coverage, perhaps, when they  
20 transition from children to adult Medicaid.

21                  And I know some of you are very concerned and  
22 interested in more data and policy on a national level

1 around that, and that's so encouraging to me because I also  
2 have a child with a disability.

3 But really, I'm here to say on behalf of families  
4 like mine and those I support, thank you, and please, let's  
5 do more if we can to fill those holes to not allow lapses  
6 in coverage. I love the idea of extending child  
7 eligibility. So I'm so glad to hear that's on the table,  
8 and anything I can do in Ohio would be helpful.

9 So really, a thank-you and a comment, and I love  
10 that idea. So I'm looking forward to hearing more.

11 CHAIR VERNON JOHNSON: Thank you, Amy.

12 Appreciate your passion and for calling in, and we hope you  
13 call in for future meetings as well.

14 All right. Any other comments? Give it one more  
15 second.

16 [No response.] One more second.

17 CHAIR VERNON JOHNSON: Okay. All right. So  
18 seeing none, I do again want to thank you all for those  
19 comments, and I also want to remind the audience that you  
20 may also submit any comments on the MACPAC website as well  
21 if you think of something after the meeting.

22 So. with that, we will now take a lunch break,

1 and we'll return at, I believe, 12:45 noon Eastern. So  
2 we'll see you then. Thank you.

3 \* [Whereupon, at 11:36 a.m., the meeting was  
4 recessed, to reconvene at 12:45 p.m. this same day.]

1 AFTERNOON SESSION

2 [12:45 p.m.]

3 CHAIR VERNON JOHNSON: All right. Welcome back,  
4 everyone. I hope you all had a chance to get something to  
5 eat and also to recharge a bit.

6 So this afternoon, we're turning to the new  
7 community engagement requirements, right? So, as you know,  
8 these statutory changes raise a number of important  
9 implementation questions, including how states will  
10 operationalize them and how beneficiaries will navigate  
11 these processes.

12 So today's session is really a very important  
13 opportunity for us to understand what successful  
14 implementation looks like, to hear from those closest to  
15 the work where additional clarity, alignment, or support  
16 may be most helpful, and, of course, to consider how states  
17 and federal partners are preparing for these changes.

18 So, with that framing, I'm going to turn it over  
19 to Melissa and Janice to walk us through the guidance, what  
20 we've learned from some stakeholders, and the  
21 considerations emerging states plan for implementation.  
22 Then they'll introduce an expert panel to add both a state

1 and a federal perspective to the conversation.

2 So, Melissa and Janice, and I meant to say  
3 Melinda. Sorry about that, Melinda. Melinda and Janice,  
4 the floor is yours. Thank you.

5 **###** **CONSIDERATIONS FOR IMPLEMENTING COMMUNITY**  
6 **ENGAGEMENT REQUIREMENTS: FINDINGS FROM**  
7 **STAKEHOLDER INTERVIEWS**

8 \* MELINDA BECKER ROACH: Thank you so much, and  
9 good afternoon.

10 As the Chair mentioned, I will be discussing --  
11 Janice and I will be discussing key considerations for  
12 implementing community engagement requirements based on  
13 findings from our interviews with states and other  
14 stakeholders over the summer.

15 This session is meant to build on the  
16 Commission's September meeting where we discussed the  
17 history of work and community engagement requirements in  
18 Medicaid, described the new statutory community engagement  
19 requirement, and heard from an expert panel on  
20 considerations for implementing those requirements.

21 I'm going to advance the slide. I'll keep going  
22 and talk about what we're planning to cover today.

1                   We'll start today's session by revisiting the  
2    details of the community engagement requirement that was  
3    recently added to the statute. Then we'll discuss the  
4    implementation considerations that emerged from our  
5    interviews and conclude with next steps.

6                   Before we start, it's important to note that this  
7    is a fluid and fast-moving policy topic, as evidenced by  
8    the new guidance that CMS released earlier this week. We  
9    want to provide assurances to the Commission that we've  
10   reviewed the guidance and found nothing that conflicts with  
11   our overview of the law and the interview findings we're  
12   about to describe. We also want to remind you that our  
13   interviews were completed at the end of the summer when  
14   stakeholders were just beginning to digest the new  
15   requirements and consider how they would be  
16   operationalized.

17                  While we understand that thinking may have  
18    evolved since then and the findings we've gathered  
19    represent viewpoints from a discrete point in time, we  
20   think this information still holds value for the Commission  
21   and its discussion of considerations that can inform the  
22   efforts of CMS and states going forward.

1                   Before we get to the implementation  
2                   considerations, I'm going to briefly revisit the details of  
3                   the community engagement requirement that was included in  
4                   the 2025 Budget Reconciliation Act.

5                   The law requires states to implement a community  
6                   engagement requirement for non-pregnant, non-dually  
7                   eligible individuals between the ages of 19 and 64 who are  
8                   eligible for coverage under the adult expansion group or a  
9                   Section 1115 demonstration that provides minimum essential  
10                  coverage. Individuals must comply with the community  
11                  engagement requirement to enroll in Medicaid and to  
12                  maintain their eligibility. Those subject to the  
13                  requirement must engage in 80 hours of work or community  
14                  service or halftime education or a combination of those  
15                  activities for a total of 80 hours in a given month.

16                  States must implement the requirement by January  
17                  2027 unless they receive a good-faith effort exemption to  
18                  delay implementation. HHS is required to issue an interim  
19                  final rule to implement the requirements by June of next  
20                  year.

21                  This slide shows populations that qualify for an  
22                  exception from community engagement requirements. They

1 include current and former foster youth, certain parents  
2 and caretakers, individuals who are medically frail,  
3 individuals who are or have recently been incarcerated, and  
4 those who meet SNAP or TANF work requirements as well as  
5 others that are listed here.

6 States can choose to provide short-term hardship  
7 exceptions to individuals who have experienced certain  
8 events. Hardships include having stayed in an acute care  
9 setting, such as in a hospital or nursing facility or  
10 receiving care of similar acuity, including in an  
11 outpatient setting.

12 States can also grant hardship exceptions for  
13 individuals in areas affected by a federally declared  
14 emergency or high unemployment.

15 Individuals who traveled for an extended period  
16 of time for medical services for themselves or a dependent  
17 may also be eligible for a hardship exception.

18 States must determine compliance when an  
19 individual applies for Medicaid and every six months, or at  
20 least every six months, as part of the redetermination  
21 process. They can also choose to determine compliance more  
22 frequently.

1                   States have some discretion to decide the look-  
2 back period for compliance. That can be one to three  
3 consecutive months before an individual applies for  
4 Medicaid and one or more months, consecutive or not, before  
5 redetermination or other compliance check if the state  
6 decides to determine compliance more frequently.

7                   To reduce the need for individuals to report, the  
8 law requires states to use existing data where possible to  
9 determine compliance and identify individuals eligible for  
10 an exception. One way that states can determine compliance  
11 through employment is by assessing whether an individual's  
12 income is greater than or equal to the minimum wage times  
13 80 hours.

14                   For a seasonal worker, states can assess whether  
15 the individual meets that threshold by looking at their  
16 average monthly income for the previous six months.

17                   The law provides \$200 million for states to  
18 establish systems to implement community engagement as well  
19 as other provisions in the law that affect Medicaid  
20 eligibility determinations and redeterminations. Half of  
21 that funding will be awarded equally to all 50 states and  
22 the District of Columbia, and the other half will be

1 awarded according to a formula that accounts for each  
2 state's population of individuals affected by the community  
3 engagement requirement. The law also provides \$200 million  
4 for CMS to support implementation.

5 I'll move now to highlighting implementation  
6 considerations that arose in our conversations with  
7 stakeholders over the summer.

8 Interviewees included representatives from CMS,  
9 state Medicaid agencies, national associations, beneficiary  
10 advocacy organizations, and vendors, as well as subject-  
11 matter experts from think tanks, academia, and consulting.

12 Stakeholders consistently emphasized the  
13 importance of CMS engaging early and often with states to  
14 support implementation, including the need for guidance  
15 before the IFR is due in June.

16 Some states noted that understanding which topics  
17 CMS will address in the IFR or other guidance and which  
18 decisions they'll leave to states would help them plan and  
19 prioritize more effectively.

20 In our interviews, CMS acknowledged the amount of  
21 work that states have to do in a limited amount of time and  
22 the need for guidance before June.

1                   Also relevant to the implementation timeline,  
2    states raised questions about the criteria and process for  
3    receiving a good-faith effort exemption through which  
4    states can delay implementation. Several stakeholders  
5    expressed a preference for CMS to be flexible in granting  
6    good-faith effort exemptions and noted that whether a state  
7    previously implemented similar requirements through a  
8    Section 1115 demonstration will likely have a bearing on  
9    CMS's consideration of such requests.

10                  The compressed implementation timeline is one of  
11   several reasons stakeholders are hopeful that CMS will give  
12   states maximum flexibility in operationalizing community  
13   engagement requirements. Stakeholders also cited the need  
14   for flexibility given the variability of state eligibility  
15   and enrollment systems, such as whether state systems are  
16   integrated with other human services programs or have the  
17   capacity to receive data from other entities to determine  
18   compliance and exception status.

19                  Several stakeholders highlighted the important  
20   role that community partners can play in effective  
21   beneficiary outreach, as evidenced by state experience  
22   during the public health emergency unwind.

1                   Another strategy that proved effective during the  
2 PHE unwinding is for states to partner with managed care  
3 organizations to obtain more current and reliable  
4 beneficiary contact information to support community  
5 outreach.

6                   Stakeholders also emphasized the importance of  
7 states sending notices in clear and plain language and  
8 using multiple modes of communication to promote  
9 beneficiary awareness and collect needed information. One  
10 stakeholder highlighted the need for clear CMS guidance on  
11 the use of text messaging specifically, including through  
12 platforms such as WhatsApp.

13                  Stakeholders identified data sources for  
14 determining mandatory exceptions as well as data  
15 limitations and considerations for accessing data.  
16 Medicaid programs are less likely to have data on  
17 individuals with no prior enrollment relative to existing  
18 beneficiaries. Medicaid enrollment applications could be  
19 modified to capture additional information needed to  
20 identify individuals who are new to the program and  
21 eligible for an exception to the community engagement  
22 requirement.

1                   States can also use claims data to identify  
2                   individuals with certain medical conditions that qualify  
3                   them for an exception, though there's often a significant  
4                   lag in claims data that will limit their usefulness in this  
5                   context.

6                   Stakeholders pointed to managed care data,  
7                   including encounters and case management data, as a more  
8                   timely and reliable data source.

9                   Interviewees noted that requirements to verify  
10                  mandatory exceptions will result in a need for additional  
11                  information as well as manual processes, which is likely to  
12                  create more administrative burden for both states and  
13                  beneficiaries.

14                  Interviewees raised several questions related to  
15                  the criteria for mandatory exceptions and expectations for  
16                  verifying those exceptions, which they hope to see  
17                  addressed in CMS guidance. States were particularly  
18                  focused on the criteria for medical frailty, given how  
19                  significantly CMS guidance on the topic will affect  
20                  implementation.

21                  Other questions relate to the definitions of  
22                  caregiver and substance use disorder treatment, what will

1 constitute evidence of compliance with SNAP or TANF work  
2 requirements, the use of self-attestation, and the  
3 frequency with which an individual's exception status will  
4 be reassessed.

5 Some of the states we interviewed reflected on  
6 the short-term hardship exceptions they provided under  
7 their earlier Section 1115 demonstrations and emphasized  
8 the need to be flexible when considering circumstances that  
9 affect an individual's ability to participate in qualifying  
10 activities. These states and other stakeholders raised  
11 questions about the types of hardships that will qualify  
12 someone for an exception and the type of verification that  
13 CMS may require.

14 Stakeholders also noted uncertainty about how  
15 states will calculate unemployment rates for the purposes  
16 of determining whether an individual in a given area or  
17 whether individuals in a given area are eligible for a  
18 hardship exception.

19 I'm going to turn it over to Janice now to  
20 continue discussing implementation considerations from our  
21 interviews.

22 \* JANICE LLANOS-VELAZQUEZ: Thanks, Melinda.

1                   Regarding the definition of community engagement,  
2    stakeholders would like states to have flexibility to  
3    further define the criteria for meeting community  
4    engagement requirements to reflect the various ways in  
5    which individuals participate in qualifying activities.  
6    For example, one stakeholder asked if states would be  
7    allowed to average an individual's income over a period of  
8    several months.

9                   Stakeholders requested further guidance on what  
10   activities would qualify as community engagement, including  
11   the definition of a work program and the need for guidance  
12   to clarify whether that includes job search activities,  
13   clarity concerning individuals in supported employment  
14   programs, and they would like guidance on the criteria for  
15   activities that would qualify as community service. For  
16   instance, one stakeholder asked if certain types of  
17   caregiving, such as providing unpaid care to an elderly  
18   neighbor, would be considered community service.

19                   Waiting for the next slide. You got it. Thanks.

20                   As Melinda described earlier, the law gives  
21   states the option to verify engagement in qualifying  
22   activities more frequently than every six months. Several

1 stakeholders raised concerns that states choosing to verify  
2 compliance more frequently than required could experience  
3 increased disenrollment and administrative burden.

4 Among the different qualifying activities,  
5 stakeholders generally agreed that verifying traditional  
6 employment would be least challenging compared to verifying  
7 nontraditional employment, such as gig work, babysitting,  
8 or community service, or engagement in multiple activities.

9 The law requires states to verify compliance with  
10 community engagement requirements by using available data.  
11 To do this, states will need to use several data sources to  
12 support verification, which may involve using existing data  
13 sources in new ways. For example, states currently use  
14 wage and income data sources to verify eligibility for  
15 Medicaid, and states would now be required to use the data  
16 to determine compliance with community engagement.

17 And state Medicaid agencies would also likely  
18 need to obtain data from other state agencies, such as  
19 school enrollment data, and when compliance cannot be  
20 determined using available data, stakeholders suggested  
21 that states provide user-friendly solutions for  
22 beneficiaries or their employers to submit documentation.

1                   For verifying employment, wage and income data  
2                   were cited as the primary source. The two main data  
3                   sources mentioned by interviewees were quarterly wage data  
4                   and Equifax's The Work Number. Quarterly wage data include  
5                   individual-level gross income data reported by employers in  
6                   the state, and The Work Number is a database that provides  
7                   verification services such as employment and income  
8                   verification for commercial and government entities.

9                   Stakeholders identified several considerations  
10                  for using these commonly cited income and wage data  
11                  sources. Quarterly wage data, as mentioned, contain  
12                  individual-level gross income data, which means that they  
13                  do not account for deductions. The wages are typically  
14                  aggregated up to the quarter, which means that state  
15                  Medicaid agencies would need to perform calculations to  
16                  ascertain monthly wages. These data are reported on a  
17                  quarterly basis, and they can lag up to three months.

18                  Some of the advantages that stakeholders cited  
19                  for this source is that these data are free and they could  
20                  provide data for a sizable share of individuals. However,  
21                  some of the limitations noted include that the data are not  
22                  very timely, they lack detailed information, and though it

1 could cover a sizable share of the population, that can  
2 vary widely from state to state. And lastly, individuals  
3 engaged in nontraditional employment are not included in  
4 wage data.

5 For The Work Number, stakeholders noted that it  
6 is more detailed income data, and it can't account for  
7 deductions. The data can be more timely than wage data,  
8 and the data could be real-time depending on several  
9 factors, such as the criteria that are used to query a  
10 valid response. Some of the advantages cited include that  
11 it is more timely and more detailed, but one of the major  
12 limitations stakeholders highlighted was the cost of using  
13 The Work Number. Also, the timeliness of the data and the  
14 share of the population covered can vary, and similar to  
15 wage data, individuals engaged in nontraditional employment  
16 are not included.

17 As we just mentioned, stakeholders consistently  
18 raised concerns about the cost of The Work Number. For  
19 example, The New York Times recently reported that the cost  
20 of North Carolina Medicaid's Equifax contract nearly  
21 doubled in recent years, going from \$11.6 million in 2022  
22 to \$22.5 million in 2025. Some stakeholders suggested that

1 CMS allow states to use The Work Number without charge,  
2 even on a short-term basis, as was done during the PHE  
3 unwinding.

4 Individuals who are self-employed or engage in  
5 gig work often do not receive conventional pay stubs, which  
6 makes their income difficult to verify using traditional  
7 wage and income data sources.

8 Several stakeholders highlighted CMS's piloted  
9 Income Verification as a Service, or IVaaS, application as  
10 a potential solution to help states address this challenge.  
11 However, because IVaaS is still being piloted, there is  
12 little publicly available information.

13 School enrollment data can be used for verifying  
14 engagement in education-related activities. A couple of  
15 the states that we interviewed shared that they are working  
16 with their state education departments to determine which  
17 data can be shared, and as mentioned previously, verifying  
18 community service will be challenging.

19 Stakeholders suggested several ideas for  
20 verifying community service, such as adopting processes  
21 used by state judicial agencies for court-mandated  
22 community service or allowing beneficiaries to submit

1 documentation.

2 Stakeholders emphasized the need to allow for --  
3 can we go back one? Thank you.

4 Stakeholders emphasized the need to allow for  
5 self-attestation when data are not immediately available to  
6 verify their circumstances. This flexibility will be  
7 particularly important for new applicants, for whom the  
8 state does not have claims or other information to  
9 determine compliance and exceptions. Some interviewees  
10 noted that because self-attestation is an existing practice  
11 in eligibility determination processes, it should be  
12 considered acceptable for determining compliance.

13 Also, states would benefit from guidance on  
14 viable data sources and expectations for data recency for  
15 ex parte verification.

16 Stakeholders raised questions such as what data  
17 sources will states be expected to use and how recent  
18 should those data be for the purposes of determining  
19 compliance.

20 CMS guidance could also identify free data  
21 sources that states should check before paying to access  
22 other data sources, and clarification is needed on how

1 states should operationalize the provision, allowing  
2 beneficiaries an opportunity to cure.

3 Stakeholders pointed out that the law does not  
4 specify the period of time for which a beneficiary must  
5 demonstrate their compliance after they receive their  
6 notice of noncompliance.

7 Medicaid IT system changes to implement community  
8 engagement requirements will likely be costly and time-  
9 intensive. For example, the Government Accountability  
10 Office found that Medicaid IT system changes accounted for  
11 over 90 percent of total administrative spending for  
12 Georgia's work and community engagement demonstration. The  
13 number and scope of system changes will depend on the  
14 state's existing Medicaid IT infrastructure; for example,  
15 whether a state has a legacy or more recently modernized  
16 system or whether it's integrated with other human services  
17 programs such as their SNAP or TANF program.

18 To operationalize determining compliance or  
19 identifying excepted individuals, states will need to  
20 assess what data they have, what data they need, and the  
21 functionality that would be required. These decisions will  
22 inform what system changes are feasible by the

1 implementation deadline and to the extent which automation  
2 is prioritized.

3 Stakeholders shared that states' abilities to  
4 maximize automation is affected by the short implementation  
5 timeline and limited funding. To help mitigate some of  
6 these concerns, stakeholders suggested that states  
7 prioritize low-cost data sources that cover a large share  
8 of beneficiaries.

9 And even though automation could help processes  
10 be more efficient, stakeholders cautioned that automation  
11 could require higher upfront investments compared to manual  
12 processes.

13 Another consideration highlighted by stakeholders  
14 regarding the short implementation timeline is that it  
15 limits states' abilities to competitively procure systems  
16 vendors. Stakeholders suggested that CMS support states in  
17 the procurement process. They can do so by leveraging the  
18 Advanced Planning Document, or APD process, to establish a  
19 range of what system changes are expected to cost and by  
20 streamlining the APD process to expedite processing and  
21 alleviate time and resource constraints.

22 Stakeholders would like states to provide

1 beneficiary supports to assist them in meeting community  
2 engagement requirements. Support could include enrollment  
3 assisters, enhanced call center capacity, and accessible  
4 application locations. Stakeholders expressed concerns  
5 that the law does not require states to address barriers to  
6 compliance such as lack of transportation. This is an area  
7 where CMS could establish expectations as they did under  
8 Section 1115 demonstrations, where they asked states to  
9 describe their strategy for helping beneficiaries to  
10 achieve compliance. States raised questions about whether  
11 federal matching funds will be available for beneficiary  
12 supports.

13 CMS shared that they intend to monitor various  
14 aspects of community engagement implementation and that  
15 they are using lessons from PHE unwinding to inform their  
16 process. For example, they noted reviewing all data that  
17 states currently submit to identify any gaps and to  
18 determine what new data might be needed.

19 Stakeholders generally agreed that CMS should  
20 closely monitor implementation of community engagement  
21 requirements, and several expressed concerns that the law  
22 does not require additional monitoring.

1 Stakeholders emphasized that monitoring is  
2 important because it helps identify trends that may  
3 indicate the need for adjustments. They also conveyed that  
4 timely, high quality data and meaningful metrics are  
5 important for effective monitoring.

6 Several stakeholders and CMS pointed to the  
7 experience with reporting during the PHE unwinding as a  
8 useful model for the development of metrics for monitoring.  
9 During the PHE unwinding, some states made additional data  
10 publicly available, including through the development of  
11 public-facing dashboards, and states used those data to  
12 identify issues and adjust their outreach and other  
13 strategies accordingly.

14 Stakeholders suggested several metrics that could  
15 help monitor implementation and track beneficiary outcomes  
16 after rollout. They identified some metrics already  
17 available through existing data sources, such as the  
18 monthly performance indicators that report on call centers,  
19 applications, renewals, and Medicaid enrollment. They also  
20 proposed measures to track outcomes such as the effects on  
21 new enrollment, health outcomes, and appointments.

22 Several of the proposed metrics would require

1 collecting data specifically on individuals subject to  
2 these new requirements, and because the requirements have  
3 not been in place before, most states have not historically  
4 reported information on this population, and as a result,  
5 these metrics would be considered new and would need to be  
6 developed.

7 Another proposed monitoring metrics related to  
8 individuals subject to community engagement requirements  
9 include tracking beneficiaries subject to community  
10 engagement requirements, and within that population those  
11 who qualify for an exception reported in aggregate and  
12 reporting on those identified through ex parte processes.  
13 They also expressed interest in tracking beneficiaries who  
14 lose coverage due to noncompliance with the requirements,  
15 further stratifying that data by beneficiaries who aren't  
16 compliant because they didn't meet community engagement  
17 requirements or they aren't compliant because they didn't  
18 submit evidence of compliance

19 And lastly, they suggested tracking beneficiaries  
20 satisfying community engagement requirements, reported in  
21 aggregate, and stratified by each type of qualifying  
22 activity, that is, tracking the number who are satisfying

1 their requirement through employment, through school, or  
2 community service, and also stratifying the verification  
3 methods, whether it was via *ex parte* or via manual  
4 processes.

5 A final consideration highlighted by states and  
6 stakeholders is regarding technical assistance.

7 Stakeholders shared that in addition to the ideas for  
8 topic-specific technical assistance, states would benefit  
9 from multistate online forums that enable cross-state  
10 learning on topics such as beneficiary outreach.

11 Stakeholders cited some CMS approaches during PHE unwinding  
12 as helpful models. One state Medicaid official said that  
13 this type of sharing of what works and what doesn't was  
14 particularly helpful during PHE unwinding.

15 For our next steps, we have an expert panel that  
16 is following this session which will further discuss  
17 considerations for community engagement implementation, and  
18 in January we will return to provide more information about  
19 opportunities for monitoring.

20 But for today, based on what we presented, we  
21 welcome your feedback on the considerations presented and  
22 the direction of the Commission's work on monitoring.

1     Specifically, we are interested in whether Commissioners  
2     would like us to emphasize or elaborate on any of the  
3     considerations raised by stakeholders when we draft our  
4     June chapter, do Commissioners share the view of  
5     stakeholders we interviewed that CMS should monitor  
6     enrollment changes that result from community engagement  
7     implementation, and are there any specific monitoring  
8     principles that the Commission thinks are important for us  
9     to consider, such as the frequency of monitoring,  
10    transparency, and actionable metrics.

11                   And with that, I will pass it back to the Chair.

12    Thank you.

13                   CHAIR VERNON JOHNSON: All right. Thank you  
14    both. That was very helpful. We do have some time here to  
15    have some of those questions answered, right? Melinda, we  
16    have a little bit of time before the panel begins. So with  
17    that, let me open it up for Commissioner questions or  
18    comments. All right. Great. I will start with Jami, then  
19    go to Heidi and Doug. So with that, Jami.

20                   COMMISSIONER JAMI SNYDER: Thanks, Verlon, and  
21    thanks for this overview, in particular, of the stakeholder  
22    interviews. I just wanted to reiterate, you know, during

1 unwinding managed care organizations, providers, and  
2 stakeholders were so critical to the states' success in  
3 being able to engage members. So I would love for us to do  
4 additional research on the role that various parties can  
5 play in supporting the states in not only documenting  
6 compliance but also documenting any exemptions, in  
7 particular, those that are more difficult to document, and  
8 are they straightforward. So just would love for us to  
9 continue to look at the role of partners such as managed  
10 care organizations.

11 And Melinda, I know that CMS released some  
12 guidance this week. Can you elaborate a little bit on what  
13 that guidance stated in terms of the role of MCOs, because  
14 I know there have been a lot of questions around what MCOs  
15 can and can't do in supporting the states.

16 MELINDA BECKER ROACH: Sure. The informational  
17 bulletin that CMS released earlier this week restates the  
18 provision of the 2025 Budget Reconciliation Act, which  
19 prohibited managed care plans from making determinations as  
20 far as beneficiary compliance with the work requirement.  
21 But it does underscore the role that managed care  
22 organizations can otherwise play in supporting

1 implementation and conducting beneficiary outreach and some  
2 of the functions that you mentioned. And CMS notes that  
3 that is a topic on which they plan to provide further  
4 guidance.

5 CHAIR VERNON JOHNSON: Thanks. Heidi.

6 COMMISSIONER HEIDI ALLEN: Thank you so much for  
7 this. I just want to stress what I feel like is the  
8 importance of maintaining a state-by-state ability to  
9 compare the infrastructure and policy decisions that states  
10 are going to be making, to try to understand, as this  
11 begins, kind of where people are and what levers they are  
12 pulling. It's so complex, and yet the fact that they are  
13 all doing it together to me signals an opportunity to try  
14 to really understand what's working well and what's not.  
15 And whatever detail we can get about each state and their  
16 processes I think would be really helpful.

17 And then the second thing I'm curious about is,  
18 you know, reflecting on the unwinding, there were several  
19 times that CMS paused a state's process because of  
20 indications that something might be going wrong and that  
21 disenrollment was higher than expected. Do you think that  
22 there is any appetite for MACPAC making recommendations or

1 if CMS indicated that they are thinking about something  
2 like that, if we start to see unexpectedly steep drops in  
3 enrollment that vary significantly by state?

4 MELINDA BECKER ROACH: CMS has not provided any  
5 indications as far as their appetite for doing something  
6 like that in the context of community engagement  
7 implementation, at least to our knowledge. And I think as  
8 far as whether that's an area that the Commission would  
9 want to weigh in on, it's something that we can take back  
10 for further discussion.

11 CHAIR VERNON JOHNSON: Thank you. Doug.

12 COMMISSIONER DOUG BROWN: Thank you. I want to  
13 make sure -- well, I want to make this comment first. It  
14 seems to me that the biggest challenge is going to be the  
15 IT infrastructure within states to be able to manage work  
16 requirements. And I know that there is money set aside,  
17 \$100 million divided by the number of states, so each state  
18 is going to get about \$2 million, and there are other  
19 additional funds that are appropriated from that point.

20 With those funds, can states still use that money  
21 and then get a 90/10 match on that, but use the \$2 million,  
22 they can still draw down up to \$20 million to do the

1 infrastructure development here? Is that part of this?  
2 Does that still exist in the way this is set up?

3 MELINDA BECKER ROACH: The guidance that CMS  
4 released earlier this week does confirm the ongoing  
5 availability of enhanced matching funds for certain  
6 activities related to a state's Medicaid IT assistance.

7 COMMISSIONER DOUG BROWN: Thank you.

8 CHAIR VERNON JOHNSON: Thank you. Adrienne.

9 COMMISSIONER ADRIENNE MCFADDEN: So I want to  
10 just add my exclamation point to a couple of points that  
11 have already been made and make a third. I think we  
12 learned a lot from the unwinding and the importance that  
13 partners have played as far as some of the successes that  
14 we saw towards the end there, including sort of the MCOs  
15 and the community-based organizations, and hope that we can  
16 reflect that in the chapter.

17 The second is I agree with Doug, that I think the  
18 IT is super important and cannot be stated enough times.

19 And then the third piece, it's hard for me not to  
20 make the connection between the last sort of session we  
21 just had with children and youth with special health care  
22 needs and some of the folks that were ineligible for SSI

1 and then who kind of churn and went over to expansion as a  
2 bridge to maintain coverage. So I think that -- you know,  
3 I hate the saying that the devil is in the detail, but the  
4 detail will give us all the answers when we start to define  
5 some of these exceptions. And I do think there is an  
6 opportunity for us to be informative and helpful in coming  
7 up with sort of definitions that will not create more gaps  
8 for particular subsegments of the population that really do  
9 need coverage under Medicaid.

10 CHAIR VERNON JOHNSON: Thank you, Adrienne.  
11 Carolyn.

12 COMMISSIONER CAROLYN INGRAM: Thanks. One of the  
13 questions I had was, in your interviews, if the issue of  
14 consent ever came up, and adding that to the application  
15 process. And the reason I ask is it seems like a lot of  
16 the problems around notifying people, like whether it's  
17 through texting or email, and getting hold of people could  
18 be taken care of if we have permission and consent from  
19 people to text or email them information.

20 Likewise for gathering pay stubs and other  
21 information, there are a number of kind of newer companies  
22 out there that are operating off of platforms that are much

1 more efficient and faster, with all the new technology,  
2 that can gather this information together. But again, we'd  
3 probably need consent from members to be able to do that.

4 So I'm just wondering if your -- and I'm not sure  
5 if that's totally true, but I'm thinking it is -- if that  
6 whole issue of consent ever came up when you were  
7 discussing what states are looking at doing with their  
8 application processes to make things a little bit easier.

9 Thank you.

10 JANICE LLANOS-VELAZQUEZ: So the issue of consent  
11 did come up when it came to income verification  
12 specifically, where some stakeholders shared that there are  
13 some consent-based systems that could help facilitate  
14 income verification. It didn't come up specifically in the  
15 context of adding it to the Medicaid application or in the  
16 context of beneficiary outreach. But Melinda, correct me  
17 if I'm wrong on that.

18 MELINDA BECKER ROACH: No, I think that's right,  
19 Janice. I don't have anything different to add.

20 COMMISSIONER CAROLYN INGRAM: Yeah, that may be  
21 something we want to dig a little bit into, but also just  
22 think about in terms of our recommendations, for states or

1 CMS to recommend to states that they figure out a process  
2 for that. Again, I think a lot of these problems, like  
3 looking at the whole issue about how to gather pay  
4 information, how much it's going to cost from Equifax. A  
5 lot of that can be overcome if we have permission, as  
6 states, to gather the information from individuals, from  
7 other sources.

8 So I think it's worth it for us to consider that  
9 recommendation. Thanks.

10 CHAIR VERNON JOHNSON: Thank you. Mike.

11 COMMISSIONER MICHAEL NARDONE: Thanks, Melinda  
12 and Janice, for this work. As I was reading some of the  
13 materials and this presentation you really highlighted a  
14 lot of the issues that I'm thinking about as we look to  
15 implement community engagement.

16 I guess I wanted to just put a point maybe on a  
17 couple of those things. I mean one, I think, is, you know,  
18 the advantage of doing the community engagement through  
19 1115s is you do have a monitoring and evaluation framework  
20 that's kind of built in. And we learned a lot from, I  
21 think, the examples of unwinding as to how important  
22 monitoring can be to kind of be timely, knowing what's

1 happening on the ground. I think Heidi and others have  
2 mentioned that, and I just kind of want to reinforce that.  
3 It's really important that a framework is put in place to  
4 do effective monitoring in a timely way.

5 I think it's also important to be able to look at  
6 this maybe longer term, in terms of evaluation and in terms  
7 of how effective this is in terms of actually helping  
8 people get on the road to employment and positive outcomes  
9 with health care. I think that's something that would be  
10 helpful to have that evaluative framework to perhaps be  
11 able to answer some of those questions.

12 Echoing other points that people made about IT.  
13 I think one of the things I'm going to be looking to hear  
14 about is what type of flexibilities or what type of  
15 prioritization will CMS allow with the APD process in terms  
16 of, you know, will these get expedited given the time frame  
17 that states have to implement this? I would expect to hear  
18 from Lindsey from NAMD that this is kind of an all-hands-  
19 on-deck work activity for the next year. So I think that  
20 some flexibility to overcome some of these IT hurdles will  
21 be particularly critical.

22 And the other thing I'm just wondering, as I'm

1 thinking about kind of the capacity question, is whether or  
2 not your interviews, or stakeholder engagement, stakeholder  
3 feedback indicated kind of how states were handling this  
4 workload or thinking about how they would handle this  
5 workload beyond the IT issues, Because I think that this is  
6 a significant workload. And I am concerned about what are  
7 some of the opportunity costs of this over the course of  
8 the next year in terms of the Medicaid program.

9 CHAIR VERNON JOHNSON: Thank you, Mike. Dennis.

10 COMMISSIONER DENNIS HEAPHY: I wanted to ask  
11 about really the reporting requirements. And I'm  
12 wondering, you mentioned that states have, the criminal  
13 justice system often has work requirements. Are there  
14 states that have best practices in reporting that we could  
15 look at, to get a sense of what states are actually doing  
16 already in reporting this information?

17 And then my other question is regarding the  
18 digital divide. I think it's really important to track  
19 which populations may not be reporting data properly or  
20 timely or in the manner required, to see if there are folks  
21 falling through the cracks because of the digital divide,  
22 if states are going to rely on technology reporting. So

1 I'd like to see more about both of those things. Do you  
2 have thoughts on that, Melinda, regarding what best  
3 practices might be out there? And you mentioned the memo.  
4 I don't know if you mentioned states that had best  
5 practices. I don't recall seeing it.

6 MELINDA BECKER ROACH: Dennis, would you mind  
7 clarifying your interest in best practices with regard to  
8 reporting?

9 COMMISSIONER DENNIS HEAPHY: Sure. So there are  
10 states that have reporting systems that have high levels of  
11 compliance or high levels of engagement with folks that are  
12 required to be employed. Let's say if someone is on  
13 parole, the rate of folks on parole who lose their parole  
14 status because of not meeting work requirements. That sort  
15 of thing.

16 MELINDA BECKER ROACH: I think that's something  
17 we can take back and think more about and try to  
18 incorporate more of that type of information into our work  
19 going forward.

20 COMMISSIONER DENNIS HEAPHY: Because I think that  
21 probably states would do a good job, if they've got work  
22 requirements for people in collecting that data and working

1 with populations, low-income populations. So yeah, thanks.

2 CHAIR VERLON JOHNSON: Thanks, Dennis. April.

3 COMMISSIONER APRIL HARTMAN: I guess my question

4 is more around any innovative ideas that there might be out

5 there that doesn't put the impetus for reporting on the

6 individual. We know that they have a very difficult time

7 accessing these systems, reporting this data that needs to

8 be reported. And I'm asking this because recently I heard

9 a presentation that used data from the Distressed

10 Communities Index, which looks at people between 25 and 54

11 years old, and the economic opportunity in their community.

12 And in a state like ours that has -- and I'm from Georgia -

13 - but a state like ours that has a lot of rural areas,

14 there may be a lot of people who are unemployed, but the

15 unemployment rate doesn't reflect that. There's just not a

16 lot of opportunities, and people have become disengaged.

17 So I'm just wondering if there are any innovative

18 ideas where segments of the population who would qualify,

19 instead of qualifying them individually can be qualified

20 based on some other metric other than them having to

21 individually report on their qualifications.

22 CHAIR VERLON JOHNSON: Thank you, April. Any

1 other questions or thoughts?

2 [No response.]

3 CHAIR VERNON JOHNSON: All right. From my  
4 perspective I appreciate all of the Commissioners' thoughts  
5 and questions, particularly around the IT systems, knowing  
6 how important that is in this particular initiative.

7 The only other question I had was more around  
8 exceptions categories. I mean, obviously they are very  
9 important and they are going to be complex, for sure. And  
10 just as we go down this path further, just to get more  
11 insights around how states are thinking and identifying and  
12 handling exceptions that they have in place would be  
13 helpful.

14 And with that it looks like John has a question.

15 COMMISSIONER JOHN McCARTHY: Not so much a  
16 question but it's a statement thinking about this as we go  
17 forward. So, Melinda, not too much for you to be looking  
18 at right now, but incentives for managed care plans is to  
19 get people enrolled into the program and keep them  
20 enrolled. So one of the issues that I know came up even  
21 for redeterminations is once a person falls off the  
22 program, the managed care plan, because of the marketing

1 rules, can't reach out to that person or cold call them,  
2 both because of what's in statute in Title XIX plus CMS  
3 rules and state rules. I think that's something for us, as  
4 the Commission, to be looking at.

5                   And those rules made sense pre-community  
6 engagement requirements but, you know, if we're going to be  
7 looking at this, this is the law now, looking into this  
8 going forward, would that be something that MACPAC should  
9 be taking a look at, and should those rules be changed so  
10 that managed care plans could be doing outreach to  
11 individuals who aren't enrolled, helping them to become  
12 enrolled by helping them get work. Because per that CMS  
13 guidance letter that we talked about earlier, moving  
14 forward if you don't have one of the qualifying conditions  
15 you will have to be doing some type of community  
16 engagement, either one month, two months, or three months,  
17 before you become eligible.

18                   So again, how can we use other entities to help  
19 people get employed, or be working in some type of  
20 community type of setting that qualifies and then move  
21 forward? So again, this isn't so much a question but  
22 something for us, as a Commission, I think to be thinking

1 about, another area to look at, is how to help people  
2 become qualified for the program. Thanks.

3 CHAIR VERNON JOHNSON: Thank you, John. Any  
4 other questions or thoughts?

5 [No response.]

6 CHAIR VERNON JOHNSON: All right. Melinda and  
7 Janice, I know our panel is supposed to start in about 15  
8 minutes or so. So if there are no more questions then,  
9 let's see, do we want to just take a break then? Would  
10 that be helpful? All right. Let's do that. So we'll  
11 take a 10-minute break and be back in 10 minutes. Thank  
12 you all.

13 \* [Recess.]

14 CHAIR VERNON JOHNSON: All right. I'll turn it  
15 back over to you, Melinda and Janice, to kick us off for  
16 the panel. Thank you.

17 **### EXPERT PANEL ON IMPLEMENTING COMMUNITY ENGAGEMENT**  
18 **REQUIREMENTS**

19 \* JANICE LLANOS-VELAZQUEZ: Thanks, Verlon.  
20 Good afternoon. We're so glad to have Caprice  
21 Knapp from CMS and Lindsey Browning from the National  
22 Association of Medicaid Directors, or NAMD, to reflect on

1 the considerations we heard from stakeholders and to  
2 provide insight into how states and CMS are implementing of  
3 community engagement requirements.

4 Dr. Caprice Knapp is the principal deputy  
5 director of the Centers for Medicaid and CHIP Services, and  
6 Lindsey Browning is the deputy executive director of  
7 programs at NAMD. Commissioners can find their full bios  
8 in the meeting materials.

9 I'll start the conversation by posing several  
10 questions to the panelists, and then I'll turn it to the  
11 Chair to facilitate Q&A with Commissioners.

12 Caprice and Lindsey, thank you so much for  
13 joining us today.

14 Commissioners just discussed key considerations  
15 that arose in conversations with states and other  
16 stakeholders over the summer about implementation of  
17 community engagement requirements. How do those  
18 considerations align with the questions and considerations  
19 you are hearing now from state Medicaid leaders?

20 Caprice, would you like to start?

21 \* DR. CAPRICE KNAPP: Sure. Thanks, Janice, and  
22 thank you to the Commissioners and to MACPAC for inviting

1 me to come and talk about community engagement.

2 What's, I think, very interesting is how aligned  
3 what you all heard as Commissioners with what we heard.

4 So we have spent the last several months talking  
5 to every state who is subject to community engagement  
6 requirements, but one, and we have a planning meeting set  
7 up with that state. But anyway -- and Lindsey and the team  
8 at NAMD helped us facilitate those. Sometimes they were  
9 one-on-one meetings; sometimes they were group meetings.  
10 But the good news is we heard almost very aligned with what  
11 you all heard, concerns as it relates to timelines, IT, how  
12 things are defined, how the data will be used, how  
13 verification will happen, and as you all have so nicely  
14 laid out in the document, the pieces.

15 The one piece we did not hear from that I thought  
16 was new is the last piece at the end where you have the  
17 table, where it's, you know, metrics. I understand that  
18 was put forward, some ideas. That will be a second phase  
19 for us as we go through and talk to states, but again,  
20 alignment, which is good because we are hearing what you  
21 are hearing. I think you can -- the way I would describe  
22 it is an evolution of what we are hearing.

1                   At first, when we started having these  
2   conversations with states, it really was about the timeline  
3   and IT, and we understand that because that's the heavy  
4   lift to do in terms of what your IT system is. Do you use  
5   what you have? Do you bring in new vendors? How do you  
6   pull that together? But the great news is I think now  
7   states, even if they haven't solved that problem, are  
8   moving on to ask more policy questions. And we are getting  
9   really good feedback out there, both at the high level,  
10   which you all described, and then some really good nuances.

11                   So, Lindsey?

12   \*               LINDSEY BROWNING: Yeah. I would just plus-one  
13   to a lot of that. And just for context for folks, the  
14   National Association of Medicaid Directors, you know, we  
15   are supporting all 56 Medicaid leaders and their teams  
16   across the country, and it's sort of from that vantage  
17   point -- and particularly from the vantage point of  
18   supporting key senior leaders in the program, finance,  
19   policy, eligibility, et cetera, that we are engaging with  
20   our CMS partners in this, in this moment.

21                   So, really, the big considerations, like Caprice  
22   said, are outlined in what you all heard. It's really that

1 robust engagement with CMS on kind of the policy and  
2 operational matters, early and often, and thrilled that  
3 that has been happening through those small-group listening  
4 sessions, through NAMD's affinity groups and CMS folks  
5 coming to that, and through kind of an ongoing series of  
6 calls with state leaders and CMS to really hash out some of  
7 those questions, surface some of those questions.

8 IT systems, another huge area of focus and  
9 thrilled that we'll get to dig into that a little bit  
10 today, but really kind of digging into understanding what's  
11 needed, you know, what solutions are out there as far as  
12 systems, and kind of estimating what the cost will be of  
13 that build.

14 And states really see this as an opportunity to  
15 disrupt that first dollar model of spending, where every  
16 state is paying kind of first dollar costs, even when some  
17 of these vendors are implementing similar solutions or  
18 changes in multiple states.

19 And then member engagement is really key, and I  
20 see a lot of attention focusing on that now of how do we  
21 build the foundation and build a strong plan to engage  
22 Medicaid members, both in the upfront policy design but

1 also throughout the arc of implementation, so folks  
2 leveraging their MACs and BACs to be able to do that,  
3 learning from their SNAP colleagues, and the work, you  
4 know, that we know has been ongoing in SNAP around  
5 community engagement, and leveraging that infrastructure  
6 and relationships built during the unwinding that have  
7 really upped Medicaid's game and upped the capacity to do  
8 effective member engagement.

9 JANICE LLANOS-VELAZQUEZ: Thanks.

10 So it sounds like based on what you've shared,  
11 there is a lot of alignment between what we learned through  
12 our interviews and through what you're hearing and what  
13 you're hearing from states as far as considerations for  
14 implementing these requirements. Are there any  
15 considerations we haven't addressed that are important to  
16 highlight?

17 I know, Caprice, you had mentioned them, but we  
18 can start with you, and then we can turn it to Lindsey.

19 DR. CAPRICE KNAPP: At a high level, no.

20 I do think when you get down to the details in  
21 terms of, you know, particular pieces of the policies,  
22 implementation, and operating it, I think we'll end up

1 hearing more from the states.

2 Just as an example, on education, for example,  
3 there's been discussion, and you all noted in some states,  
4 about how they can link up to their higher ed and the data  
5 stream there to try and verify. And so the states are  
6 asking us another question, even at a layer below that,  
7 which is, suppose I get the information, I'm really looking  
8 to see, is this person part-time attending, you know,  
9 higher ed, but what happens if they're not but they have  
10 three hours? And so how do we convert those hours if it's  
11 semesters, if it's quarters? How does that conversion  
12 work?

13 So, again, I mean, I think you all have the broad  
14 categories in there, which is great. We're just starting  
15 to get the next layer and the next layer down from that,  
16 which is great, which says people are really putting a lot  
17 of thought into this. And we are taking -- well, we're  
18 obviously taking all those questions as well. We have an  
19 email that we've set up, medicaidreforms.com, and I'll make  
20 sure that I put that in the chat so that people have access  
21 to that. And again, we're getting one-off questions that  
22 are, again, a layer or two deeper.

1                   LINDSEY BROWNING: Yeah. And I'll just wrap  
2 around with three things.

3                   I think, first, at the highest level, we're still  
4 seeing that there's not great understanding in the  
5 landscape around the differential impact of the bill's  
6 policies, particularly on expansion and non-expansion  
7 states. In particular, I've had a couple of Medicaid  
8 directors say to me that they've been on the receiving end  
9 of large community campaigns around work requirements and  
10 community engagement, and there's just not -- again, not  
11 understanding that it doesn't apply to certain states. So  
12 I think that's important.

13                  The second is the operational reality that  
14 eligibility policies in the bill need to be sort of looked  
15 at and taken together, knowing that the more frequent  
16 redeterminations, the changes to retroactive coverage  
17 periods, et cetera, come online at the same time. So I  
18 think a deep appreciation that Caprice and Anne-Marie and  
19 the team at CMCS are thinking about it in that way, and  
20 states are as well, but I didn't see that surface as much  
21 in the findings.

22                  And then the third and most important one that I

1 would flag is that consideration of community engagement  
2 implementation alongside a provision that doesn't go into  
3 effect until 2029, and that is the change in Section 71106,  
4 which limits CMS's ability to use a good-faith effort  
5 around certain audit findings, right?

6 So currently, if PERM audit findings are above 3  
7 percent, there's a process in place for those overpayments  
8 to be returned or for there to be financial implications,  
9 but traditionally, CMS and states have worked through a  
10 good-faith effort process to resolve excess errors there.

11 That flexibility or ability to use that pathway  
12 goes away or is limited starting in 2029. So what that  
13 means for now in the current moment is that as states are  
14 implementing these policies, they are keeping an eye  
15 towards making sure there's a clear paper trail, that  
16 things are auditable so that there isn't financial risk on  
17 the back end if PERM errors go up.

18 So happy to talk more about that, but I do feel  
19 like that's a piece of the policy picture that maybe isn't  
20 getting as much attention in the current moment.

21 JANICE LLANOS-VELAZQUEZ: Thanks for raising  
22 that.

1                   So, Lindsey, what are some specific areas in  
2 which state Medicaid agencies are looking for additional  
3 guidance or support from their federal partners as they  
4 work toward implementing community engagement requirements?

5                   LINDSEY BROWNING: Yeah. So, first and foremost,  
6 what I would say -- and this was in the findings from your  
7 all's interviews -- is really the importance for states in  
8 getting those early signals from CMS, and all states  
9 subject to community engagement are really appreciative of  
10 CMS's efforts to have those early conversations, send  
11 signals when they can, knowing that June is very late. So  
12 that's at the highest level.

13                  I think, broadly, Medicaid leaders are really  
14 looking for clarity on where CMS intends to be specific in  
15 its policy and those areas where CMS intends to provide  
16 more flexibility and state option around implementation.

17                  But digging in kind of from that a little  
18 further, I think continued desire and conversation with CMS  
19 partners around timelines, particularly timelines for sort  
20 of outreach to those first cohorts of folks who are subject  
21 to community engagement or have the renewals early in 2027.  
22 I think better understanding from CMS around what a minimum

1 viable product for the IT solutions might look like, and  
2 again, ongoing conversations there.

3 I think an interest in understanding what a glide  
4 path might look like for more automated processes or  
5 connecting to data feeds, particularly as Caprice said,  
6 around the volunteer engagement where it feels like we  
7 collectively are at a more nascent stage, kind of how do we  
8 move towards the goal of more automation.

9 I think new data reporting expectations, as you  
10 all are interested in, is an area where having that  
11 clarity, having that conversation with CMS will be really  
12 helpful so that those can be baked into the systems  
13 changes.

14 And then the last two, I think the overlay of  
15 those other eligibility policies that I mentioned with  
16 community engagement is an area where there will be  
17 questions way down deep in the weeds where eligibility  
18 experts will surface things, and I think having those  
19 opportunities will be important.

20 And then, finally, you all talked about this a  
21 little bit in the last session, but the role of managed  
22 care organizations and what is within bounds and out of

1 bounds for the role that they can play in supporting their  
2 state partners in implementing this.

3 JANICE LLANOS-VELAZQUEZ: Thanks, Lindsey.

4 Caprice, we've seen that CMS has started to issue  
5 some guidance through informational bulletins recently, but  
6 what topics is CMS planning to address through guidance or  
7 technical assistance before the IFR is issued in June?

8 DR. CAPRICE KNAPP: I appreciate the question,  
9 Janice.

10 And I want to say I misspoke. It's  
11 medicaidreforms.cms.hhs.gov. I just want to clarify that,  
12 and anyone can use that, and again, we're using those  
13 questions as we think about building out documents.

14 So, to your point, we understand that the IFR  
15 that comes out in June is way late in the game, and just to  
16 make sure that everyone in the audience understands the  
17 difference between an IFR and a notice of proposed  
18 rulemaking, for example, when the IFR comes out, we'll take  
19 public comments, but it won't be like typically what  
20 happens where we have a notice of proposed rulemaking. We  
21 take public comment, final rulemaking. But in the IFR  
22 process, there still will be an ability to put in public

1 comment.

2 Again, understanding that June is too late or  
3 puts too much pressure on states, the administrator has  
4 been, I think, incredibly helpful at trying to push for  
5 letting us get out some regulatory guidance earlier than  
6 June. So, on Monday, like you mentioned, we published two  
7 things. One, we published a Center information bulletin  
8 that is on community engagement, and we published a slide  
9 deck that's associated with that. So, as you were talking  
10 about, you know, what are states asking for, I think the  
11 CIB really does a good job of outlining when there are  
12 decisions that are state decisions that we are not involved  
13 in, and states can go ahead and make those decisions.

14 So, for example, I think you all noted about the  
15 short-term hardship exemptions. States can decide whether  
16 they want to take those up. That's not our choice.

17 The second choice, for example, another example  
18 would be about the renewal period or the look-back period,  
19 and so, for example, when you start doing community  
20 engagement, the state can choose one, two, or three months  
21 to do a look-back period to determine if that individual  
22 has met the community engagement requirements. That's a

1 decision states make.

2 So the CIB, I think, really tried to point out  
3 where areas were state decisions, where areas where CMS  
4 would be providing guidance, and a lot of that spelled out  
5 in the bill.

6 And again, thinking about all the avenues in  
7 which we have to do this, Lindsey hit on the minimum viable  
8 product. We have been talking a lot with states and  
9 vendors about that minimum viable product, about what our  
10 expectations are there, just to make sure that everyone is  
11 on the same page, and so we've outlined some of that  
12 minimum viable product.

13 So I think you'll see from us, in an iterative  
14 fashion, that sub-regulatory guidance and trying to get to  
15 the point of so that, obviously, we're not waiting until  
16 June, and we're trying to send signals ahead of time.

17 We started our Friday calls again, and we've  
18 started all-state calls again, and so information is being  
19 pushed out that way to the Medicaid directors and their  
20 staffs, and NAMD helps us with that. We also have, again,  
21 our all-state calls. So that's another venue where we'll  
22 be sending signals and describing some of the policy

1 decisions as we get closer.

2 JANICE LLANOS-VELAZQUEZ: Thanks, Caprice, and  
3 thanks for sharing the email address.

4 Lindsey, we've heard a lot from states and other  
5 stakeholders about the parallels between community  
6 engagement requirement implementation and the public health  
7 emergency, or PHE, unwinding. What are some key lessons  
8 from the end of the PHE that could help inform state  
9 efforts and the way that CMS and states engage around  
10 community engagement requirements?

11 LINDSEY BROWNING: Yeah. I think there's a lot  
12 of lessons learned, but I think maybe just to start off  
13 with one important difference, which was during the  
14 unwinding, the work between CMS and states was really to  
15 understand the application of an existing body of policy,  
16 established policy. So I think important to keep in mind,  
17 we're sort of at a point in time where there isn't that  
18 body, right? This is new policy that's being developed and  
19 worked on.

20 So, setting that aside, I think there's  
21 incredible lessons learned and incredible foundation of  
22 progress made during the unwinding that'll be really

1 essential to operationalizing community engagement.

2 The first and the biggest leap forward that I  
3 think we all saw during the unwinding were efforts to  
4 better automate eligibility processes. In particular, we  
5 saw ex parte renewals, a massive focus on how do we  
6 increase that rate of ex parte renewals, and saw that play  
7 out in the data.

8 I think in the most recent report from CMS, the  
9 August 2025 enrollment report, 50 percent of individuals up  
10 for renewal were renewed on an ex parte basis. That's as  
11 compared to 34 percent that were renewed ex parte in  
12 September 2023. So I think clear progress in linking to  
13 different data sources and strengthening those ex parte  
14 processes that we know are consumer friendly, right,  
15 because there's less sort of touches involved and effort  
16 involved, but also help maximize the capacity of the state  
17 eligibility workforce at a time when there will be an  
18 increasing workload there.

19 The second key lesson learned, I think, is the  
20 maturation of member engagement structures and various ways  
21 of engaging community partners in doing the work of  
22 outreach and articulating changes that are coming in

1 Medicaid and what action is needed on the part of  
2 consumers, and we saw this through various focus groups  
3 leveraging the member advisory committees that were already  
4 in existence in some states and whatnot.

5 And then, finally, I would say really leveraging  
6 the infrastructure that's been built, and that's  
7 infrastructure as far as outreach modalities. You know,  
8 the beginning of the unwinding, very few states were doing  
9 text messaging. Now it's pretty ubiquitous in Medicaid,  
10 leveraging, you know, AI to help assist eligibility workers  
11 in doing reviews, leveraging relationships with new  
12 partners, community partners, schools, et cetera, to reach  
13 folks. So I think it's really setting states up to be in a  
14 much better position to move quickly to implement because  
15 of the work during the unwinding.

16 JANICE LLANOS-VELAZQUEZ: Thank you.

17 And, Caprice, is there anything you'd like to add  
18 as far as lessons learned from the PHE unwinding,  
19 particularly given your experience as a Medicaid director  
20 in the lead-up to that period?

21 DR. CAPRICE KNAPP: Yes, a couple of things. I  
22 think Lindsay did a great job of covering the things that

1 we learned.

2 I think for us, we went to the legislature, and  
3 just for clarity, I was a Medicaid director in North Dakota  
4 for the years during the PHE and the unwinding. And one of  
5 the things that we did was make sure we went to the  
6 legislature to secure outreach dollars. We actually had an  
7 outreach campaign. We worked with public health. They are  
8 experts in outreach and doing public campaigns.

9 And so, as you read the community engagement  
10 statute, it talks about states, you have to do three months  
11 of outreach before you start. So that's a requirement.  
12 But, I think what we learned is that that outreach needs to  
13 be frequent.

14 So what we've talked about at CMS is that --  
15 again, the three months of outreach is going to be --  
16 that's part of the statute, but we're encouraging states to  
17 often, even after that three months, that's right. So,  
18 again, that was a lesson.

19 Managed care, how you use your managed care  
20 organizations, how you partner with them, and really being  
21 -- Lindsey talked about text messaging, et cetera. The  
22 plans can do that as well. The plans have great outreach

1 into the communities, great CBO partners, community-based  
2 organization partners, and the plans can be just a  
3 fantastic player in this.

4 And then the last thing I'll say is vendor  
5 engagement. You know, I have -- obviously I was not at CMS  
6 working during the unwinding, but I know one thing that's  
7 been very critical to the Administrator is to engage with  
8 vendors early in this process, and so we have done that.  
9 We have reached out to traditional enrollment eligibility  
10 vendors, new vendors that we're seeing, to really have  
11 conversations with them from the beginning about  
12 expectations of their role in this, because again, it is  
13 going to be a very significant role.

14 And I think -- and then communication.

15 Obviously, CMS, I think during the unwinding, again, we had  
16 constant communication coming out. We had calls, and on  
17 some of these calls -- you know, sometimes you go to an  
18 all-state call, nobody says anything. That was not the  
19 case. We would have calls during the unwinding, and lots  
20 of people asking lots of questions. And so, we hope that  
21 is the case going forward as well about communication  
22 requirements and we'll have those similar opportunities.

1 JANICE LLANOS-VELAZQUEZ: Thank you.

2 And the final question we have for the moderated  
3 portion is, in a lot of our conversations with  
4 stakeholders, one of the topics that came up a lot was the  
5 importance of monitoring implementation of community  
6 engagement requirements. The Commission is interested in  
7 better understanding the type of information that CMS  
8 already collects from states and whether additional data or  
9 information might be needed to provide insight into how  
10 state implementation is going.

11 Caprice, can you describe the approach that CMS  
12 intends to take toward monitoring state implementation of  
13 community engagement requirements?

14 DR. CAPRICE KNAPP: Sure. So what we have  
15 planned for calendar year 2026, anytime that states submit  
16 to us an advanced planning document, or an APD, around an  
17 IT system build or an IT system upgrade, there are  
18 continual checks in with the state. What is the progress  
19 of that? How is procurement going? What is the testing  
20 looking like?

21 So we're gonna build off of that framework in  
22 2026 to have monthly meetings with states. What we're

1 going to add on to that -- so, again, that's a structure  
2 that we have in place about the IT systems, and it works  
3 quite well.

4 Our data systems group has folks that are  
5 assigned to different states. They know the folks at the  
6 states. They have good relationships with them.

7 So, again, as they're doing those monthly  
8 meetings, we're looking at how ready are you? How ready  
9 are you, and where are you in the process? What we're  
10 going to layer on top of that, though, is an operational  
11 piece to that, which is about the policy, right, and about  
12 training and staff, because we understand that this just  
13 isn't an IT exercise. You also have to write the policies.  
14 You have to go to your legislature, get appropriations  
15 authority. Your eligibility staff need to be trained. You  
16 might have redesign happening.

17 So the goal is to meet with states every month to  
18 get updates on that. And DSG has a format that they  
19 already use for that so that we will have a good idea by  
20 June, July, August where people are in that process.

21 The other thing you mentioned, Janice, is about  
22 data, and we're in the middle. We've got some small work

1 groups going. We haven't made decisions yet. Again, it  
2 was great to see that table at the end of the report about  
3 the types of outcome measures that people are thinking  
4 about. So that part, we haven't made decisions about yet.  
5 We're still iterating on that, but understand that that is  
6 a critical part of the IT build, right? We need to make  
7 sure that you have the reporting in there.

8 And we have learned quite a few lessons from our  
9 colleagues down in Georgia about some of the outcome  
10 measures and thinking about how those are structured. So,  
11 an example that we learned is if we get to the end and  
12 someone, for example, is coming up for renewal and it's  
13 decided that -- or through the verification, they're no  
14 longer enrolled, well, it could be that they're no longer  
15 enrolled because they're above income. It could be that  
16 they're no longer enrolled because they -- through that  
17 process, there was a different part of Medicaid or a  
18 different category of eligibility. And so, what we learned  
19 in Georgia is that just at the end to say this is the  
20 number or the percentage of people that were no longer  
21 enrolled really doesn't provide you with the granularity of  
22 data that you need to understand what happened.

1                   So, we're going to be taking lessons from them  
2   and, again, looking for input from states and understanding  
3   that there's a balance there between everybody is going to  
4   want to know what happens, but we can't have 65 measures to  
5   review, so thinking about sort of the burden on states to  
6   report versus what is really, really critical to know and  
7   understanding that there's gonna be an iteration to this  
8   over time.

9                   So just like with lots of measures, it could be  
10   that there's a core set of things that we want to know and  
11   understand from now until perpetuity, but it could be that  
12   there are additional things that come up or trends that  
13   we're seeing that we want to ask states about.

14                  So that's the approach that we're taking and  
15   happy to talk more about that if folks are interested.

16                  JANICE LLANOS-VELAZQUEZ: Thank you.

17                  And, Lindsey, what are some key considerations  
18   related to monitoring that are important for states and CMS  
19   to keep in mind?

20                  LINDSEY BROWNING: Yeah. I think just building a  
21   little bit on what Caprice said, having a reasonable number  
22   of measures and having those baked into the systems build

1 are really critical from the state perspective.

2                   And I think also, to the extent possible, what  
3 are the existing universe of data and measures that we  
4 have, like you guys kind of mapped in the analysis, and how  
5 can we build on those? I think that's really key.

6                   But going to the broader question of monitoring,  
7 how's implementation going? Where are there road bumps? I  
8 think it's really key to have this collaborative approach  
9 that we're seeing play out between states and our CMS  
10 partners to be able to have kind of candid conversations  
11 around what issues are coming up, what's not going well,  
12 where are we running into roadblocks? And I think the  
13 ability to do that in a very collaborative way is key, and  
14 those bi-weekly calls are a great example of that.

15                   And then being able to spot issues kind of  
16 early, early and often as the work moves forward.

17                   And then, I think as Caprice mentioned, kind of  
18 leveraging existing sources of information and reporting  
19 that states may already be doing, like the APD process, is  
20 really key to try to make sure that maximum state capacity  
21 and effort can go to the implementation work rather than  
22 kind of new reporting burdens.

1                   JANICE LLANOS-VELAZQUEZ: Great. Again, thank  
2 you both so much, and I will now pass it to the Chair to  
3 moderate further discussion. Thanks.

4                   CHAIR VERNON JOHNSON: Yeah. No, thank you  
5 again, Caprice and Lindsey. This was very helpful to all  
6 of us. We've been looking forward to it, so really happy  
7 you're able to join us today. You have some really good  
8 insights for us and a lot to think about. And also Janice  
9 for moderating and Melinda too as well.

10                  So, we do have some time now for the  
11 Commissioners to follow up on some of what we've heard.  
12 So, we definitely want to open up the floor for some  
13 questions to our panelists.

14                  I will start with one, and it may be too soon.  
15 So just because you just released the guidance, additional  
16 guidance on Monday -- and I know that you all had these  
17 amazing checkpoints that you're doing, but just curious.  
18 So maybe with the new federal guidance that's now released,  
19 are you hearing anything yet from states about their  
20 initial priorities as they really begin planning for  
21 implementation for this? You know, maybe some including  
22 how they may be thinking about sequencing, you know, what

1 comes now versus what comes in 2027.

2 DR. CAPRICE KNAPP: Thanks, Verlon.

3 CHAIR VERLON JOHNSON: Yeah.

4 DR. CAPRICE KNAPP: I think obviously the IT, the  
5 minimum viable product, is top of mind for everyone, and  
6 then the next big chunk of decisions, I think, that are  
7 really critical that we've been focused on is qualifying  
8 events, your work, your jobs programs, your volunteering,  
9 and your education, thinking through what is the structure  
10 for that, what are the expectations, what does verification  
11 look like, same thing with exemptions, exceptions and  
12 exemptions, and then thinking about within those  
13 exemptions, a lot of interest in medical frailty.

14 We've had several small group conversations on  
15 medical frailty. I'm happy to talk more about that.

16 And then the timelines. I do think that the bill  
17 is maybe confusing a little bit about the timelines and  
18 thinking about when states actually again have to do that  
19 three months at outreach. Then they're going to choose  
20 their one to three months of look-back, and then they're  
21 going to start. So, you could be thinking about a whole  
22 six-month process before actually there's a go-live, and so

1 trying to get a feel from states about what their  
2 expectations are, we have some states that want to go  
3 early, a handful of states. And so that's a good  
4 opportunity for us to get in and learn exactly what you're  
5 talking about, which is what's top of mind and what's gonna  
6 be difficult for them.

7 I think the renewal timeline is one of those  
8 where there's still questions about, because the statute  
9 talks about states have the option of how frequent they  
10 want to check verification, but again, we'll still have to  
11 work through that and think about what states' choices are  
12 and how that impacts operations and implementation.

13 CHAIR VERNON JOHNSON: That's really helpful.

14 Lindsey, anything else to add?

15 LINDSEY BROWNING: Yeah, I would just add from  
16 kind of a state policy lens, I think there's this  
17 orientation to, particularly, the employment pieces and  
18 income verification and then the education pieces, knowing  
19 that that's likely the bulk of individuals and qualifying  
20 activities, and recognizing that the volunteer piece,  
21 again, is a little more nascent as far as what data sources  
22 we have, how we can automate those processes. So, I think

1 really trying to prioritize what are the strategies we can  
2 pursue to capture the bulk of the population and then build  
3 on those moving forward.

4 CHAIR VERNON JOHNSON: That's very helpful.

5 Thank you.

6 So, I see my Commissioners. There are many hands  
7 up. I'll start with Anne.

8 COMMISSIONER ANNE KARL: Thank you so much for  
9 being here today. It's really helpful to hear this.

10 I've heard a lot about minimum viable product and  
11 iterating. These are great concepts when you're talking  
12 about testing a new social media app. I have some concerns  
13 about thinking about that in the context of a situation  
14 where people will lose access to Medicaid coverage as a  
15 result of technological challenges.

16 I think, Lindsey, your comments on how something  
17 like volunteering, which is in the statute, is just much  
18 harder to track.

19 So, with that in mind, it feels like there needs  
20 to be some way to understand at what point a state has done  
21 enough to actually be able to knock people off of coverage  
22 or at some point where their technology is so poor that it

1 is honestly violating people's constitutional rights to not  
2 be able to maintain access to coverage because of the  
3 limits of the technology.

4 So, I wanted to understand how CMS is thinking  
5 about whether there is like a readiness review. You  
6 wouldn't let a state launch a new Medicaid managed care  
7 plan without having done a readiness review to make sure  
8 that the plans can take that on. Will there be some type  
9 of readiness review to make sure that state systems are  
10 operating effectively enough?

11 And then related to that, completely hear and  
12 agree, we do not want to bog states down with so much  
13 reporting that it's taking away from their time to be able  
14 to implement effectively. But I do also wonder if this  
15 degree of technological functionality, if we need to be  
16 checking that so that as we start to be monitoring  
17 enrollment changes and you see, oh, there's a group of  
18 states that's losing more people than others, is there a  
19 way to crosswalk that with the technological features?  
20 Like, oh, they're all using one vendor, or, oh, the high  
21 performing states all have cracked the code on education  
22 linkages or volunteering.

1                   So, it's sort of two things. Like, will there be  
2    a readiness review and, then what's the plan to be  
3    monitoring the technological variations across states so we  
4    can match that up against the enrollment changes?

5                   LINDSEY BROWNING: I'm happy to -- do you want to  
6    jump in first, Caprice?

7                   DR. CAPRICE KNAPP: No, actually you go ahead,  
8    Lindsey.

9                   LINDSEY BROWNING: Okay. I was gonna jump in on  
10   the technology piece in particular. I see a clear interest  
11   from Medicaid leaders in wanting to make sure the  
12   technology works and delivers an effective platform  
13   consumer experience and, again, automating as much as  
14   possible. And I think Medicaid leaders are really building  
15   in that timeline, that time for testing, right, which is  
16   part of why there's that urgency to make decisions around  
17   the technology path now to be able to do the testing and  
18   training of staff.

19                  I think there's a shared interest in working with  
20   the federal partners in a very transparent way to get  
21   results from the technology and, quite frankly, to get  
22   better results than we've seen in the past, right? I think

1 this is why this is an opportunity to disrupt the norm in  
2 some of the technology challenges we've seen in the past,  
3 so I think an eagerness to do that in a very transparent  
4 way.

5 The other thing I would say -- and I think this  
6 is a lesson learned from the unwinding -- is sometimes when  
7 implementation timelines are short, you end up sort of  
8 wrapping around the technology with manual processes until  
9 you can automate. And I think that's going to continue  
10 necessarily to be a piece on the table as states think  
11 about implementation and how to achieve -- you know, how to  
12 make it work for the numbers.

13 DR. CAPRICE KNAPP: And just quickly to add on,  
14 yes, we're going to have a readiness review process -- I  
15 talked about that -- in 2026. We will meet monthly with  
16 states to do both IT readiness review and policy operations  
17 readiness review.

18 And I do think on the tech side, I really liked  
19 the way that Anne said that about that crosswalk. One of  
20 the things that I think has been confusing when we've  
21 talked to people about this is it's not just one system.  
22 You have your enrollment eligibility system. That could be

1 great for those of us that have integrated eligibility.  
2 Sometimes we don't. Sometimes SNAP and TANF live in other  
3 places than Medicaid, but you have your enrollment  
4 eligibility system.

5 And then either you're going to go with your  
6 traditional vendor and infuse into that system your  
7 community engagement requirements, but you could also do a  
8 mechanism where you've got enrollment eligibility. Then  
9 you have community engagement as a module which would  
10 interface with your enrollment eligibility system, and so  
11 it's different amalgamations of what states have and what  
12 they're going to go forward with.

13 And then there's a third piece to this, and this,  
14 I think would be in the future. It would be great if  
15 states could get there right out of the gate, but there's a  
16 third piece to this where that then wraps around in a  
17 closed-loop referral to those community-based organizations  
18 that you have, right? So, it would be great. We know that  
19 the plans have great experience doing that already, but  
20 again, I think of it as sort of layers.

21 And I love that idea of crosswalking, and that  
22 was the goal of doing these monthly readiness reviews.

1 CHAIR VERNON JOHNSON: Thank you.

2 I see Sonia and then Jamie.

3 COMMISSIONER SONJA BJORK: Thank you.

4 I was hoping either or both of you could opine a  
5 little bit on all the information we're receiving lately  
6 that AI is going to change the game and help beneficiaries  
7 get through this process, meaning that a lot of different  
8 tech companies are developing things and offering products  
9 that they hope are going to help in this new era. And I  
10 was just wondering if you see any prescriptive actions by  
11 either federal agencies or state agencies giving guidance  
12 on what should or shouldn't happen or if it is okay for us  
13 to engage and see what rises to the top in terms of the  
14 best types of apps or portals or et cetera that can  
15 interface with all the eligibility programs.

16 I'm sure you're getting a lot of the same pitches  
17 that certain companies have the solution for one and all,  
18 but right now there's just so much going on about that.  
19 So, I was just wondering what you're hearing.

20 LINDSEY BROWNING: I'm hearing both a healthy  
21 degree of skepticism but inquiry and interest in what those  
22 solutions might be, and my colleagues who support our CIO

1 affinity group are having those active conversations among  
2 states to compare notes and be able to ask critical  
3 questions around what's really realistic and what is maybe  
4 not quite there yet.

5 I think we have some experience from some  
6 Medicaid programs who've started to adopt AI to support  
7 eligibility processes and document review in particular, so  
8 some real tangible and concrete places where I think we  
9 have a body of evidence to support that it can work and be  
10 helpful and then those areas where we need to better  
11 understand and test before we can say for sure.

12 DR. CAPRICE KNAPP: And really quickly, I really  
13 appreciate our partners. NESCO and CHCS put on two recent  
14 events for your states and for your Medicaid directors, and  
15 both of these were to showcase the vendors in the states.  
16 One was CHCS, it was a Zoom-in. Vendors did an hour of a  
17 demo. There were lots of vendors that participated. And  
18 states could come in, come out, and hear the pitches. And  
19 sometimes that's good because sometimes thinking about  
20 procurement rules and who can come in your office and give  
21 you a demo. So, we tried to set that up. The other thing  
22 is we were thinking about not everyone can travel. We

1 needed access to the information on that Zoom-in day.

2                   And then NESCO had, on November 12-14, an in-  
3 person event where, again, we had vendors there. They had  
4 vendors there, states, and their team could come in and  
5 really have that experience. I don't see CMCS writing to  
6 AI in the rule, but it would great. We think we're going  
7 to learn a lot from states. And again, it could be  
8 iterative. It could be the first year, like Lindsey said,  
9 you're really just trying to get the minimal viable product  
10 and make sure that you've launched the program. Next year  
11 maybe you have some functionalities you want to add on. So  
12 we're interested to learn from states, as well, and did  
13 learn quite a bit from them in the unwinding.

14                   CHAIR VERNON JOHNSON: Great. Thank you. Jami,  
15 and then John.

16                   COMMISSIONER JAMI SNYDER: Thanks, Lindsey and  
17 Caprice, for joining us today. This has been a great  
18 conversation. Lindsey, I really appreciate your reference  
19 to the intersection between community engagement  
20 requirements and the limitations that each or one imposes  
21 around good faith waivers for the PERM process. And, of  
22 course, it can't be top of mind for any state these days.

1 I mean, I know they're dealing with the sort of immediate  
2 issues of standing up a CE program.

3 But I'm curious to know what states are  
4 discussing in terms of protections that might be offered  
5 around eligibility determinations that are tied to  
6 community engagement, given some of the limitations around  
7 those good faith waivers that states have historically been  
8 able to take advantage of.

9 LINDSEY BROWNING: It's a great question, and I'm  
10 glad you raised this. Maybe just for those who aren't as  
11 attuned to the PERM process, I think a really good analogy  
12 or rough comparison is what we're seeing in SNAP right now,  
13 where if a state has a relatively higher error rate, there  
14 is a financial impact to the state on the SNAP benefit  
15 side. So, I think similarly, once this policy goes into  
16 effect, if there's a higher error rate the financial  
17 implications for states could be quite significant.

18 I think the way that I hear folks thinking about  
19 it now is how can we make sure there is appropriate  
20 documentation, particularly in those areas where there is  
21 policy flexibility, appropriate kind of CMS documentation  
22 of kind of signing off on the options that a state may

1 choose so that when the PERM audit comes around there's a  
2 clear paper trail and clarity that how the state  
3 operationalized it was appropriate and within the bounds of  
4 federal policy.

5 CHAIR VERNON JOHNSON: Great. Thank you. John.

6 COMMISSIONER JOHN McCARTHY: Hey, guys. Thanks  
7 for coming, like everyone said. One of the questions I  
8 had, and you touched on this a little bit, Caprice. But on  
9 the IT system side, I know you talked about the iterations  
10 in getting there, but what about the procurement side? I  
11 know you guys have been working on some things there, to  
12 help states possibly go quicker on procurement, more  
13 importantly to save money. Right? We heard Dr. Oz and Dan  
14 Brillman both talk about this at NAMD. Not everyone on  
15 here was at NAMD.

16 So can you talk a little bit about what is CMS  
17 doing to help states keep down the costs on these,  
18 especially in the IT administrative side cost of things?

19 DR. CAPRICE KNAPP: Thanks, John. So, lots of  
20 information to come, but we'll say again the administrator  
21 has been working on meeting with the vendors for quite some  
22 time, and will continue to. And the idea is to have those

1 conversations and thinking about pricing, because again,  
2 you've got 51 folks who are trying to implement a system,  
3 and we don't really want to pay 51 times for the same  
4 system. So really talking to the vendors about how can we  
5 work collaboratively there.

6 Second, procurement is an issue. And I think, my  
7 hunch tells me that we are going to see some states go with  
8 their traditional enrollment and eligibility vendor,  
9 because of that process. Sometimes it can be very timely  
10 at the state level. Many of you have contracts in place.  
11 We know some states are already working and moving forward  
12 with their traditional vendors and building out the code.

13 The other thing is thinking about how we work  
14 with those vendors to lay down expectations, to get  
15 feedback from them, about what is a core product versus  
16 what are things that states might want flexibility on.

17 So again, the more that we can get standardized  
18 helps bring down the cost, and the more that we get vendors  
19 to commit to working together with us, and working with  
20 states, and making those prices transparent.

21 The last thing I'll say that we've made clear to  
22 the vendors and that we've told states is we expect that

1 the dollars are separated. And the reason why that's  
2 really critical is when you have your APD and you're asking  
3 for dollars for your system, you can also include dollars  
4 to help train staff. You can think about dollars you might  
5 need for notices and call center. It's pieces all around.  
6 It's not just the community engagement module. And to  
7 Lindsey's point, you're going to do six-month renewals in  
8 there. You've got lots of other things happening.

9 So, what we said to states and vendors is our  
10 expectation is that you separate and present to us what the  
11 community engagement costs are, so we actually have a  
12 better idea of where the dollars are going. And sometimes  
13 that's an easy process and sometimes it's not. I  
14 understand, though, that procurement is an issue, and that  
15 is one thing we're going to be talking about in these  
16 readiness reviews.

17 LINDSEY BROWNING: I would just add two things  
18 onto that. I think the first is we've seen the IVaaS tool  
19 that was developed by the federal government, the Income  
20 Verification as a Service. And I think lots of interest  
21 from states in, again, in future years -- knowing the  
22 timeline we're on -- are there other solutions like that,

1 that can be developed and shared among states?

2                   The second piece that I would add is knowing that  
3 the systems cost is the upfront build, but also the ongoing  
4 costs of needing to tap into various data sources. So, I  
5 think there is a real interest from states in partnering  
6 with the federal government to explore how do we get more  
7 value from those data sources, that all states who are  
8 getting community engagement, or nearly all, need to tap  
9 into.

10                  CHAIR VERNON JOHNSON: Thank you for that.

11 Carolyn, and then Heidi.

12                  COMMISSIONER CAROLYN INGRAM: Thank you. Thanks,  
13 Caprice and Lindsay, for joining us. Caprice, it sounds  
14 like you all have put together lots of plans already around  
15 IT and communication. And I'm wondering if, in your  
16 conversations with states, if you or Lindsey have heard  
17 them talking about consent at all and adding that to their  
18 application process? It seems like a lot of the problems  
19 people are raising could be taken care of in that regard.  
20 So being able to automatically pull payroll and work  
21 information to check somebody's eligibility before they  
22 even come in could be managed as long as the person

1       consents to it, in terms of some application process.

2                   So, I'm wondering if states are starting to look  
3       at how they can, I guess, allow for that consent during  
4       their application process, if they started to think about  
5       that yet.

6                   DR. CAPRICE KNAPP: So, I think what Lindsey just  
7       mentioned really dovetails into that. That is the reason  
8       why a lot of states use Equifax, because the consent is not  
9       needed. On the IVaaS tool you need consent. But the great  
10      thing about IVaaS is it's going to help push some of those  
11      holes that you have even from Equifax, from gig economy,  
12      from sources that you wouldn't normally get income  
13      information on.

14                  To your point, though, I think we haven't had  
15      states bring to us this idea of, you know, can we think  
16      about different ways of getting consent? Can we say on the  
17      application that, yes, I agree to this? I think it's  
18      interesting. I think it's worth looking into. And I think  
19      that's really going to push the hierarchy of the data  
20      sources states use for income.

21                  So, for example, in Georgia we saw a definite  
22      shift in the data sources they went to, one, because of

1 cost, two, because of completeness, and three, thinking  
2 about consent and what's easiest on members.

3 But it's a good point, and we will get to that  
4 place if it's something really critical. I don't see that  
5 coming through in the rule, but I do think if there's a way  
6 to think about this that would help all states, we are  
7 certainly open to that and interested in that discussion.

8 LINDSEY BROWNING: Yeah, I think that's a really  
9 intriguing idea. You know, consent is a big challenge, and  
10 one idea we've heard is could there be sort of multiyear  
11 consent or one-year consent, something like that. But  
12 we've heard the idea of like the how of getting consent.  
13 So, I think it's definitely an interesting area worth  
14 exploring.

15 COMMISSIONER CAROLYN INGRAM: Thank you. Yeah, I  
16 think it could help lower the costs. I think what we're  
17 hearing is that Equifax kind of has a monopoly on that and  
18 is charging states quite a bit of money to gather that  
19 information. So I'm excited to hear about that IVaaS tool  
20 and that it allows for other sources, and maybe it's  
21 something MACPAC can even look at, about recommending to  
22 states as they think about a consent process. Thanks.

1                   CHAIR VERNON JOHNSON: Thank you. All right,  
2 Heidi.

3                   COMMISSIONER HEIDI ALLEN: Thank you both so much  
4 for being here. Kind of building on the previous comment  
5 of potential MACPAC recommendations, one of my questions is  
6 are there areas that you think that MACPAC could be helpful  
7 in thinking, particular, you know, because this is an 1115  
8 process there's not the same level of evaluation built into  
9 the system. It's a new policy. Are there things that we  
10 could do that would be helpful to CMS or NAMD about making  
11 recommendations on how this could be evaluated and tracked?

12                   And then my second question is for Caprice.

13 Thinking about previous times where you've implemented by  
14 technologies like, in particular, the implementation of the  
15 ACA. You know, we had some states that wanted to have  
16 their state-based marketplaces and the technology made that  
17 difficult. We know that Marketplace itself had some  
18 technological issues. And I'm curious if the law gives CMS  
19 the ability to put a pause on a state's process if they see  
20 numbers that are really unexpected.

21                   I know, with Georgia, the enrollment numbers in  
22 their expansion is lower than anticipated and that there

1 are efforts to try to figure out why that is and what's  
2 happening. But recognizing that there will be such  
3 complexity and potentially new technologies employed across  
4 all of these states, if you identify a state where  
5 enrollment is dropping precipitously, do you think that CMS  
6 will step in and say, wait, let's just hold off for a  
7 minute until we can figure out what's happening? Or is  
8 there a mechanism for that? That's my question. Thanks.

9 DR. CAPRICE KNAPP: Do you want to take the how  
10 can MACPAC be helpful, and then I'll take the second?

11 LINDSEY BROWNING: Sure. Happy to. Two areas I  
12 think I would call out. I think the first is around  
13 measuring outcomes, and I think there's a real opportunity  
14 for the Commission to surface kind of what would a small  
15 set of meaningful measures be that CMS and states could  
16 consider, again, early in the staging process?

17 I think the second is around recommendations  
18 around that member outreach. You know, we talked a lot  
19 about how there are similarities from the unwinding, but  
20 one big difference is the reality that community engagement  
21 implementation affects a subset of the population, and  
22 trying to, I think, articulate and communicate to members

1 who is impacted, who is not, and what is required is going  
2 to be a really critical and challenging exercise. And I  
3 think MACPAC surfacing recommendations, surfacing best  
4 practices for that could be incredibly helpful.

5 DR. CAPRICE KNAPP: And to your point, Heidi,  
6 which is good one, which is something goes wrong, right.  
7 Something always goes wrong when we do these big launches.  
8 We understand that. One of the things that we are working  
9 on are states that want to go early. We understand that  
10 you can go early if there is an 1115 process or a state  
11 plan amendment. But there are some states that want to go  
12 early, and actually did quite a bit of this work in  
13 building out their systems before COVID.

14 So, what we're working on with those states, one,  
15 that will be great for us in terms of lessons learned, and  
16 as we work with them, and as they go first. And what we  
17 are working on with those states is a hold harmless period,  
18 whereby if they go early and they start before everyone  
19 else, we want to make sure that for a certain period of  
20 time that they have the opportunity to not disenroll people  
21 if they choose to. So, to your point, yes, we're trying to  
22 work with those early starters, learn as much as we can

1 from them, and then give them a hold harmless period.

2                   For the folks that start on time, of course, you  
3 know, things happen, and we do have the ability, I think,  
4 through the APD process, through our data systems group, to  
5 have let's pause, let's time out. And it could be, I can  
6 think of a couple of scenarios where one could be,  
7 obviously, we start, things go wrong, we need to put a  
8 pause, but the other thing could be that I've filled out  
9 the minimum viable product, but maybe perhaps I haven't  
10 finished notices. So maybe that's not completely built out  
11 in my system yet, but maybe I can send 30-day notices  
12 through a different system. I can print them up over here.  
13 I can make sure that's being taken care of.

14                   So, we're definitely going to work with states  
15 where, you know, again, it could be 75 percent is done, 80,  
16 90 percent is done with that system, and then like Lindsey  
17 said, they might have different processes that they're  
18 using just to bridge them over. So absolutely, I think you  
19 make a great point, and a lot of lessons learned at CMS  
20 about some of these big IT launches.

21                   COMMISSIONER HEIDI ALLEN: Thank you.

22                   CHAIR VERNON JOHNSON: All right. Let's see,

1 Mike.

2 COMMISSIONER MICHAEL NARDONE: Hi. Thanks,  
3 Lindsey. Thanks, Caprice. Thanks for taking your time  
4 out. I know you've got a lot of things going on with this.  
5 And it's good to hear kind of the balance that you're  
6 looking for in terms of the monitoring of this program as  
7 it kind of unfolds. And I think we all share the concern  
8 that if people have a reason to be exempted from the work  
9 requirement because they meet those criteria, making sure  
10 that they are able to kind of meet the exemption and not be  
11 thrown off for some paperwork type reason.

12 So, I appreciate you working on that, and it  
13 sounds like there is some openness to maybe MACPAC helping  
14 you with some of those monitoring metrics. That would be  
15 helpful.

16 I think maybe Heidi stole some of my thunder a  
17 little bit in terms of, you know, I am hoping that this  
18 will be, when we do kind of set up some metrics, that there  
19 will be some transparency around this, and that's something  
20 we can use to continue to refine the program. And that's  
21 certainly what I'm hearing from you.

22 I'm wondering, do you have kind of a timeline in

1 terms of when you think you might be thinking about what  
2 that monitoring plan might look like? It sounds like  
3 you're in the process of thinking that through now, and  
4 you're hoping for feedback from MACPAC. But I guess that  
5 might be something a little bit later in the process?

6 DR. CAPRICE KNAPP: Yeah, I mean, I think what  
7 we're trying to prioritize now is, again, that minimum  
8 viable product build, and then those big, huge policy  
9 decisions that you still need to push forward to get your  
10 system built. And definitely measures for reporting are  
11 critical for building that system. We haven't gotten to  
12 that yet, but again, we have small groups working on that.  
13 I think I might have lost the end of Mike's question.

14 But again, we hear you, we understand that, and  
15 definitely that's now one that we know can wait until June,  
16 for sure.

17 COMMISSIONER MICHAEL NARDONE: Thank you. I had  
18 a more technical or just a process question, kind of what  
19 implementation actually looks like on January 1, 2027. I'm  
20 assuming that all states will have to have in place a  
21 process for new people who are coming into the program, to  
22 determine whether or not that they are eligible for

1 benefits, or that they're meeting the community work  
2 experience requirements.

3 For people who are currently on the rolls, do you  
4 envision a rolling process in terms of when they would have  
5 to demonstrate that they meet the community work experience  
6 requirement, or is the expectation that everyone has of  
7 January 1st, who was already on the program, will meet  
8 those requirements, or the state will have been through  
9 everybody on the rolls?

10 Am I being clear with my question? I don't know.  
11 Or I guess is there a process over the six months where  
12 those redeterminations happen, once that program gets  
13 underway?

14 DR. CAPRICE KNAPP: Okay. I think I'm following  
15 you. But remember, I'm sure everybody on the Commission  
16 remembers that January 1st is when the six-month renewals  
17 start, as well. And so now you're going to have a  
18 situation, to your point, Mike, that they will be new  
19 enrollees, and we're working with states about different  
20 processes for those new enrollees.

21 For example, if you're an existing enrollee and  
22 you think you might be exempted because you have a SUD

1 diagnosis, and that was included in the statute, you might  
2 have claims. A new enrollee is not going to. So, we've  
3 been working with states to think through how do those  
4 processes look different for new enrollees versus existing  
5 enrollees.

6 I think what you're asking is you're going to  
7 have your new enrollees, which obviously that's what the  
8 three months of outreach is really trying to make sure that  
9 it is widespread, that it is broad based, because again,  
10 you're trying to communicate to the public. Because we  
11 don't know who is going to show up. Then, for the people  
12 that are coming in for renewals and they're going to start  
13 the six-month, so presumably it could be that twice in 2027  
14 that they are going to come in for renewal. And what we do  
15 with renewals is typically 90 days before the renewal we  
16 start to send notifications. We send forms. And that's  
17 where, I'm sure, states are going to communicate to them,  
18 there's this new requirement, and here are the pieces that  
19 you're going to need to meet. That's typically how we do  
20 renewals. And also looking in that renewal process, if  
21 there has been a change in circumstances, that might impact  
22 folks, as well.

1                   So not 100 percent sure that I'm answering your  
2 question, Mike. There are different considerations for new  
3 versus existing. And we certainly understand that. We  
4 can't expect someone who is completely new to the system to  
5 have that information that the existing enrollees have.

6                   COMMISSIONER MICHAEL NARDONE: Yeah. I just  
7 wanted to be clear that people will have a period.  
8 January, there will be some people up for renewal in  
9 January. There will be some people up for renewal in  
10 March.

11                  DR. CAPRICE KNAPP: Sure. Yeah, absolutely.

12                  COMMISSIONER MICHAEL NARDONE: So not everyone  
13 who is currently enrolled come January 1st will have been  
14 through that redetermination process, and that will be over  
15 a six-month period, because they all have to be done within  
16 six months.

17                  DR. CAPRICE KNAPP: Correct, with one exception,  
18 and that is that we don't dictate to states in the renewal  
19 period how frequent they are going to verify. So, it could  
20 be that you have a state that says, "I want to verify every  
21 month of that six months." That's a state option for us.  
22 Understand that's, you know, that's a lot of money and a

1 lot of time there. I'm not sure at this point what states  
2 would want to do that.

3 But to your point, if you're going to use  
4 multiple months in that renewal, the individuals need to  
5 know that, and they need to know that the expectations, if  
6 I'm using the last three months, that you have met the CE  
7 requirements in each of those three months. So again, that  
8 is a state option.

9 COMMISSIONER MICHAEL NARDONE: Thank you.

10 CHAIR VERNON JOHNSON: All right. Thanks, Mike,  
11 for all those questions. All right, Adrienne, and then  
12 Dennis.

13 COMMISSIONER ADRIENNE MCFADDEN: Thank you both,  
14 as others have said, for being here. This has been really  
15 informative. Lindsey, you mentioned something about  
16 ongoing costs, which triggered a question in my brain.  
17 I've had the, we'll call it a pleasure, of living through  
18 large IT implementations in just about every professional  
19 phase of my life. So, I have grown to know that the go-  
20 live date is just one date of many dates with the IT  
21 implementation, and just one sort of large cost, and one of  
22 many large costs.

1                   So, my question, I think, is mainly for you,  
2 Caprice, which is, as states learn more in the initial  
3 phases or rollout of their minimum viable product, it's  
4 plausible, I would think, that they will have larger day  
5 one and day two enhancements to go from that MVP to more of  
6 a high-functioning, valuable product. Is there any  
7 consideration or potential for additional federal support  
8 to the states as they iterate beyond the MVP phase?

9                   DR. CAPRICE KNAPP: So, I want to understand what  
10 you mean by federal support. We already paid 90 percent of  
11 those bills. We are going to provide technical assistance.  
12 We have got two groups that can do just-in-time technical  
13 assistance. And so, what do you mean by would we provide  
14 additional technical assistance?

15                   COMMISSIONER ADRIENNE MCFADDEN: More of those  
16 dollars in addition to the technical assistance, because it  
17 seems that, in my experience, and this is different from  
18 what's happening with the states, is that you have a large  
19 cost up front to get to that first sort of V.1, V.0,  
20 however you want to call it, for that first product, and  
21 the day one and day two items are almost as costly  
22 sometimes to get to sort of the point of functionality that

1 you need to do. So that initial infusion of monies I think  
2 will be helpful, but certainly I think it's plausible there  
3 will be some major enhancement that will be just as costly  
4 or almost as costly as the initial phase.

5 DR. CAPRICE KNAPP: No, yeah, I understand. So  
6 yes, again, the APD dollars that we provide 90/10 on the  
7 design, development, implementation, and then 75/25 in the  
8 maintenance and operation. But also, I want to flag for  
9 the group that the statute calls out two pots of money that  
10 is also available to states. One is \$200 million that will  
11 be split up evenly among states, and then there is another  
12 pot -- and that could be for any eligibility activity. It  
13 doesn't have to just be for community engagement. It can  
14 be to help with six-month renewals. And then there's  
15 another pot of money to be split up for states just because  
16 it relates to community engagement.

17 So, we are taking the number of folks that are  
18 subject to community engagement requirements, and then we  
19 will divide up that pot of money proportionally. So, there  
20 are some extra dollars there. But again, to your point, we  
21 still offer the 90/10 for design, development, and  
22 implementation, and that would be, in my mind, a new piece.

1 So, we have opportunities for through that through the APD  
2 process.

3 CHAIR VERNON JOHNSON: Dennis.

4 COMMISSIONER DENNIS HEAPHY: Thank you. This is  
5 really helpful and informative. My question was really for  
6 MACPAC staff, I guess, as well as for you both. And that  
7 is how might all the work that was done on the unwinding,  
8 all the information that's been gathered, been used to  
9 support and inform what's being done now with this new  
10 requirement? Can you take all that data that's been  
11 gathered, states' data, best practices, reduced risk of  
12 harm, optimized engagement, all those sorts of things, but  
13 apply it directly to this process? I was just wondering if  
14 that might be useful, helpful, to you, Caprice, but also if  
15 that's something that folks think would be doable. Because  
16 all the work that was done, it just seems like there's an  
17 opportunity there to use it on this.

18 LINDSEY BROWNING: Yes, from our perspective,  
19 absolutely. I think we're combing through all the lessons  
20 learned from the unwinding and we welcome, you know, I  
21 think the Commission's insights there, as well, and  
22 recommendations of what were some of those best practices

1 that emerged. But yeah, we learned an incredible amount.  
2 I mean, even something as simple as like how to stay  
3 connected to Medicaid members and have more up-to-date  
4 addresses, how to deal with returned mail, those sorts of  
5 things. So, I think there's an immense amount we can learn  
6 and glean.

7 DR. CAPRICE KNAPP: And I heard you say, Dennis,  
8 that you were asking that of MACPAC, so I won't answer for  
9 them. But lots of lessons. One of the things that really  
10 helped set us up nicely; in unwinding we had a special  
11 session. We worked with the legislature. We talked to  
12 them up front about some of the flexibilities we would need  
13 in procurement, in contracting. And someone brought that  
14 up earlier, that sometimes procurement is difficult.

15 And that is one thing. The legislature was also,  
16 I think, really fantastic for making sure that we had the  
17 preparations that we needed, that we weren't constantly  
18 having to come back and ask for additional spending  
19 authority.

20 So again, I think it was not just working within  
21 the Medicaid system but also with our partners externally,  
22 and making sure that we had alignment there. But Dennis,

1 asked the staff.

2 COMMISSIONER DENNIS HEAPHY: I didn't want Kate  
3 yelling at me by putting forward this suggestion. That's  
4 why I said staff. Kate, don't yell at me for bringing that  
5 forward.

6 CHAIR VERLON JOHNSON: No yelling. No yelling,  
7 Dennis. You're good. You're good. All right. Any other  
8 Commissioners with questions? We have about four minutes,  
9 so I want to make sure that you're able to use that if you  
10 need it.

11 [No response.]

12 CHAIR VERLON JOHNSON: Okay. And I know we all  
13 know where to find both of you. But thank you so much for  
14 coming on today. Again, we were looking forward to this  
15 conversation, and it definitely gives us what we needed.  
16 So thank you, Caprice, thank you, Lindsey, for your time  
17 out of your schedules to join us. And also thank you to  
18 Melinda and Janice for pulling this all together. We are  
19 always appreciative of your efforts too, as well.

20 With that, we will actually take a quick break,  
21 and we will return at 3:15 Eastern time, for some  
22 additional Commissioner discussion around community

1 engagement. So thank you all.

2 \* [Recess.]

3 CHAIR VERLON JOHNSON: All right. So welcome  
4 back everyone.

5 **### EXPERT PANEL ON IMPLEMENTING COMMUNITY ENGAGEMENT**  
6 **REQUIREMENTS: ADDITIONAL COMMISSION DISCUSSION**

7 \* CHAIR VERLON JOHNSON: After break, we're now  
8 going to go into a conversation with our Commissioners on  
9 what we heard today during the community engagement  
10 discussion. I'll just say I thought it was a very rich  
11 discussion. It really gave us a good foundation of what we  
12 needed to know in terms of what we thought we needed to  
13 consider for our next steps, and so I think as we reflect  
14 on today's sessions and what we've heard, let's really  
15 think about some of the key themes that we heard from the  
16 discussions that really feel most important for the  
17 Commission to keep in mind as states move toward  
18 implementation.

19 We also want to think about, like, what are some  
20 of the opportunities for MACPAC to add some clarity, to  
21 elevate some lessons learned or support states for sure,  
22 and then just think about, too, are there any approaches or

1 insights from the panel that you heard that could help  
2 shape future Commission work in this area as well?

3 So, with that, I'll turn it over to the  
4 Commission for their reflections as well. Unless, Melinda  
5 or Janice, do you have anything else you want to add as  
6 well before we kick it off? Okay. All right. Perfect.

7 So, Commissioners, the floor is yours to talk.  
8 First up, let's see Tim Hill.

9 COMMISSIONER TIMOTHY HILL: So thanks, Verlon. I  
10 thought it was, as you said, a really rich discussion. I'm  
11 glad that CMS and folks came, and I think the information  
12 that the staff brought up is informative and incredibly  
13 helpful.

14 I can't help, honestly, feeling a little bit of  
15 deja vu from some of the previous big, large-scale  
16 implementation efforts at CMS around health care, whether  
17 it's the ACA or other implementation efforts.

18 So, in that regard, given our role, right, I like  
19 the conversation that we started to have around evaluation  
20 and monitoring and understanding how things are going, and  
21 I think it would be really good for the staff, for the  
22 Commission to be thinking about -- and this kind of gets

1 to, I think, the question that Mike was asking is -- when  
2 are we going to -- like, implementation dates, it's not  
3 like there's one implementation date. There's a series of  
4 implementation dates, and there's a series of dates that  
5 are going to affect people differently.

6 From a data and monitoring standpoint, what are  
7 the things we want to know and when? Right? Is there a  
8 roadmap that we can create that says, on January 1st, we  
9 need to know this; on April 1st, we need to know that; on  
10 May 5th, we need --just a series of milestones that we can  
11 know early if things are on track or off track or wobbly.

12 Obviously, the implementation effort is one  
13 between states and the federal government, but from our  
14 perspective, to be able to articulate those early warning  
15 signs, those early warning evaluation monitoring metrics  
16 that we want to see and understand to know if things are  
17 going well or not, I think would be time really well spent  
18 and something I think we could add a lot of value to in the  
19 conversation.

20 CHAIR VERNON JOHNSON: Thank you, Tim.

21 I think Adrienne had some similar thoughts too  
22 from her past as well when it came to implementation big

1 projects.

2 Patti?

3 COMMISSIONER PATTI KILLINGSWORTH: I'll keep this  
4 pretty brief. I do think it's really important that the  
5 exempted categories are -- that there's monitoring around  
6 that to make sure that that's being implemented  
7 consistently and that the requirements aren't being  
8 inappropriately applied.

9 I really liked Lindsey's recommendation that  
10 MACPAC could come up with a set of metrics, recommend a set  
11 of metrics that could be collected and reported on by all  
12 states to measure on an ongoing basis how things are going.

13 I honestly feel like it's probably a little bit  
14 late for that, just because having those designed and baked  
15 into systems are so critically important in order to be  
16 able to do that reporting with ease, and it's very  
17 important that everything is so precisely defined so that  
18 everybody's reporting it in the same way. But if it hasn't  
19 been done, it needs to be done so that we really do have  
20 some agreement on how and make sure that the data is  
21 available to really be able to monitor and evaluate.

22 And then the other thing I would say is that

1 where states have flexibility, which is great, hopefully,  
2 somebody will catalog that, right, so that we can compare  
3 the impacts of these various policy decisions that states  
4 make on the impact that that has on people being able to  
5 both attain and retain eligibility for the program.

6 CHAIR VERLON JOHNSON: Thank you, Patti.

7 Dennis and then Mike.

8 COMMISSIONER DENNIS HEAPHY: Thanks.

9 For me, the reason I raised that, what we learned  
10 from the unwinding, is really are there ways we can  
11 actually measure based on what we found in the unwinding,  
12 how things are progressing with this new undertaking?

13 And I guess my own bias is I keep thinking do no  
14 harm, and so how do you ensure that they are implementing  
15 the work requirements in a way that's going to support  
16 folks who are doing the right thing and doing no harm to  
17 them and also holding folks accountable that aren't working  
18 and aren't doing what they should be doing. But it's like  
19 that do no harm piece of it, and how do you measure that?  
20 I don't know. But I think for me, the starting place is  
21 what we learned from the unwinding.

22 CHAIR VERLON JOHNSON: Thank you, Dennis.

1                   Mike?

2                   COMMISSIONER MICHAEL NARDONE: Yeah. I was just  
3 going to say that I thought that they really seemed to  
4 like, Janice and Melinda, your chart on the data points and  
5 metrics. It seemed like maybe you had helped -- you know,  
6 you maybe were a little bit out ahead in terms of like  
7 actually looking at what might be easily collectible versus  
8 more challenging to be collected.

9                   I think that kind of finding that right balance,  
10 right, between what is the information that you really  
11 would like to have and need and would be important to  
12 evaluate in the program, without, you know, overwhelming  
13 the states as they're trying to, like, implement this new  
14 policy, I think is really something that, you know, maybe  
15 we can help with.

16                  And I think, you know, your chart that kind of  
17 showed, well, here are things that we're already  
18 collecting, they're already in the system, they're not a  
19 new implementation burden, I think those would be -- you  
20 know, I think that that's helpful. And I think kind of  
21 keeping kind of the effort around, you know, having a  
22 monitoring plan and evaluation plan, I think, would be an

1 important place for MACPAC to be.

2 I thought also just a couple of things that I  
3 heard from my fellow Commissioners that, you know, I think  
4 are worth more exploration is, I think Carolyn's point  
5 around consent was one that I think clearly resonated, I  
6 thought, in the discussion.

7 And then also, you know, some of the points  
8 around, you know, John and Jami's points around how can we  
9 -- you know, how have we been able to use our MCOs and  
10 other partners to really do the appropriate -- to do good  
11 outreach? And what are kind of some of the lessons  
12 learned, and are there things we need to explore to make  
13 sure that MCOs can be a good partner in this as they were  
14 with the unwinding?

15 CHAIR VERNON JOHNSON: Thank you, Mike.

16 John?

17 COMMISSIONER JOHN McCARTHY: Going back to what  
18 Mike was saying a little bit, we had heard, you know, on  
19 MCOs and how to engage with them. One of the things we  
20 heard at NAMD, Melisa Byrd brought up and the Medicaid  
21 director of DC and outgoing president of NAMD had asked  
22 everyone there to really get outside of our Medicaid box,

1 right, and look at the SNAP program, because now they are  
2 so intertwined in what's going on between the two.

3 So, in this new Medicaid world, we have the same  
4 issues with people finding jobs, and jobs programs in the  
5 states may not be up to snuff, you know, may not be -- they  
6 may be overwhelmed. They may be under-resourced, all those  
7 other things there. So, again, what can we do to help in  
8 those areas through managed care, Medicaid, whatever it is,  
9 to help people find jobs in a system that might be broken  
10 or not funded correctly or for whatever reason?

11 I know in Ohio, my issue was -- we had the Ohio  
12 Department of Job and Family Services when we were there.  
13 There's 88 counties, and they do these things 88 different  
14 ways, and some are better than others. And, you know, how  
15 do you work through those issues?

16 I just want to bring up, Verlon, that once again,  
17 you know, it's like, what do we need to look at going  
18 forward of what laws and rules, changes need to be done so  
19 that Medicaid can help people find, you know, any type of  
20 community engagement they need, whether it be doing,  
21 hopefully, in my opinion, jobs to help support themselves,  
22 but whatever that -- you know, whatever that takes on that

1 one.

2 CHAIR VERNON JOHNSON: Thank you, John. Good  
3 call-out.

4 Any other Commissioners? Carolyn?

5 COMMISSIONER CAROLYN INGRAM: Yeah, I think Mike  
6 brought this up, so I don't want to belabor it, but the  
7 whole issue that is puzzling to me is if Equifax is the  
8 only company that, you know, checks payroll stubs and  
9 things, because they made deals with those companies that  
10 have that information. It's just kind of a no-brainer that  
11 we start thinking about consent so that other platforms can  
12 be used to check those areas, because then it saves the  
13 state's money. It also helps the member, you know, with  
14 time.

15 That's the thing about all the new technologies  
16 that's out there. There's a lot of companies now just  
17 self-populating applications. So, you don't have to do  
18 things the old-fashioned way anymore. So, it just seems  
19 kind of like a no-brainer for us to make that  
20 recommendation.

21 It would also help with the ease of texting and  
22 email, that type of thing, if there is a general consent on

1 the application.

2 All right. I'll pause. Thanks.

3 CHAIR VERLON JOHNSON: Thank you, Carolyn.

4 Appreciate it.

5 Adrienne?

6 COMMISSIONER ADRIENNE McFADDEN: I actually just  
7 wanted to say I hope we don't lose sight of Anne's  
8 suggestion around the technology laddering up to sort of  
9 how we're monitoring for those states that are doing things  
10 effectively. I thought that was a particularly prescient  
11 sort of recommendation and certainly don't want to lose  
12 sight of that as we think about how MACPAC could maybe  
13 formulate or help inform some measurement and monitoring  
14 frameworks.

15 CHAIR VERLON JOHNSON: All right. Thank you.

16 Jami?

17 COMMISSIONER JAMI SNYDER: Yeah. I'm going to go  
18 back to something that I asked about during the panel  
19 discussion. Lindsey brought up the idea of the  
20 intersection between community engagement requirements and  
21 some of the limitations imposed by H.R. 1 around the PERM  
22 process, in particular, really limiting states' ability to

1 use that good-faith waiver process to avoid some of the  
2 financial penalties.

3 I do think it would be worthwhile to look further  
4 into the implications, the potential implications for  
5 states, and think about what states can do to mitigate  
6 risk, understanding that the PERM requirements don't go  
7 into place, the new PERM requirements, until 2029, 2030,  
8 but they need to be thinking now. States need to be  
9 thinking now about, to Lindsey's point, documentation  
10 protocols, for instance, so they can avoid penalties when  
11 the changes to the PERM process are implemented down the  
12 line.

13 And, you know, I mentioned, too, potential  
14 protections that we could offer to states, given that for  
15 most states -- not all, but most states -- this is the  
16 first time that they will be incorporating community  
17 engagement compliance into their eligibility determination  
18 and renewal protocols.

19 CHAIR VERNON JOHNSON: Thank you, Jami. Good  
20 point.

21 Any other Commissioners?

22 [No response.]

1 CHAIR VERLON JOHNSON: I'm seeing none. Bob, am  
2 I right? Keep me honest. No one else has a hand up?  
3 All right. Okay. So, thank you, Commissioners.  
4 I do look forward to future conversations around this  
5 topic, for sure.

6 So, Melinda and Janice, do you have everything  
7 you need in terms of your next -- Jami, you have your hand  
8 up again or -- okay. All right.

9 So, do you all have everything you need for your  
10 next steps? Is there anything else that you need to ask or  
11 clarify?

12 MELINDA BECKER ROACH: I think we have everything  
13 we need. Thank you so much for the robust conversation and  
14 the feedback.

15 CHAIR VERLON JOHNSON: Of course.

16 JANICE LLANOS-VELAZQUEZ: Thank you.

17 CHAIR VERLON JOHNSON: Of course, I just saw  
18 Mike's hand go up. Mike, are you good, or do you have  
19 another question?

20 COMMISSIONER MICHAEL NARDONE: I'm good. I was  
21 trying to thank Melinda and Janice for the great memo and  
22 putting together the panel, but instead, I raised my hand.

1 I was trying to clap.

2 CHAIR VERLON JOHNSON: He was trying to clap.

3 We'll teach him. We'll teach him technology.

4 COMMISSIONER MICHAEL NARDONE: Thank you.

5 CHAIR VERLON JOHNSON: No problem.

6 But again, thank you all so much. We appreciate  
7 it.

8 Okay. So we have our last session. Now we're  
9 going to go and turn our attention to states and federal  
10 tools for ensuring accountability of Medicaid and managed  
11 care organizations, and so we brought up the slides. We'll  
12 bring up the team as well.

13 I mean, as we all know, managed care continues to  
14 play a very central role in Medicaid. The majority of  
15 beneficiaries are enrolled in MCOs, of course, and so we  
16 really want to make sure we understand everything we can to  
17 make sure it's a good experience for all involved. So  
18 that, of course, makes oversight, meaningful, actionable  
19 oversight very essential for this, and so today's  
20 conversations is around the tools associated with making  
21 sure that that's happening.

22 So I'm going to turn it over to Holly and Chris

1 to facilitate the discussion and the findings, so over to  
2 you all.

3 **### STATE AND FEDERAL TOOLS FOR ENSURING**  
4 **ACCOUNTABILITY OF MEDICAID MANAGED CARE**  
5 **ORGANIZATIONS (MCOS): INTERVIEW FINDINGS**

6 \* HOLLY SALTRELLI: Great. Thank you, Verlon, and  
7 good afternoon, Commissioners.

8 Today Chris and I are going to present an update  
9 on our work in managed care accountability, as Verlon  
10 mentioned.

11 Next slide. Thank you.

12 First, we'll walk through background on Medicaid  
13 managed care accountability and provide a reminder of the  
14 oversight requirements at both the federal and state level.  
15 Next, we will present findings from stakeholder interviews  
16 and share our analysis of the Managed Care Program Annual  
17 Reports, or MCPARs. Finally, we will discuss next steps  
18 and areas where Commissioners may want to consider policy  
19 options.

20 Next slide. Oh, I can do it. Sorry. One back,  
21 please. Thank you.

22 Managed care is the predominant Medicaid delivery

1 system in most states. Almost three-quarters of Medicaid  
2 beneficiaries are enrolled in a comprehensive full-risk  
3 managed care organization, or MCO, and managed care  
4 capitation payments account for more than half of Medicaid  
5 benefit spending in fiscal year 2023.

6 States contract with the MCOs, selecting them  
7 through a competitive procurement called a Request for  
8 Proposal, or RFP, or a noncompetitive application process.

9 MACPAC has done related work on Medicaid managed  
10 care oversight in several areas. Our 2022 study on  
11 procurement found that CMS defers to state Medicaid  
12 agencies to procure MCOs, but opportunities do exist to  
13 assist states and MCOs during readiness reviews.

14 Our study on managed care external quality  
15 reviews, or EQRs, resulted in the Commission making three  
16 recommendations intended to improve the usability and  
17 transparency of EQR findings.

18 Additionally, we examined the monitoring,  
19 oversight, and beneficiary experience of the denials and  
20 appeals process. The Commission made seven recommendations  
21 that include requiring external medical review of denials,  
22 conducting clinical audits of denials, and making denials

1 and appeals data publicly available.

2 Continuing the Commission's examination of  
3 Medicaid managed care oversight and accountability, last  
4 December, MACPAC staff provided the Commission with  
5 background on the use of full-risk comprehensive managed  
6 care organization contracts, as well as findings from an  
7 environmental scan of the types of state accountability  
8 tools included in procurement and contracts.

9 To help remind ourselves of the scope of this  
10 work, here are the policy questions we are examining.

11 First, what tools, for example, sanctions or incentives,  
12 are available to states to ensure MCOs comply with contract  
13 requirements and meet performance expectations? What tools  
14 do states actually use, and do states need additional  
15 tools? What tools are available to CMS to ensure state  
16 managed care programs and their contracted MCOs comply with  
17 regulatory requirements and meet performance expectations?  
18 And to what extent does CMS use their existing tools, and  
19 does CMS need additional tools?

20 So, first, we will review the federal and state  
21 oversight requirements we identified in our initial work.

22 States are primarily in charge of managing their

1 procurements. Federal requirements are minimal when it  
2 comes to procurement. Oversight is limited to conflict of  
3 interest safeguards, and verifying contractors are eligible  
4 for at-risk contracts.

5 CMS does have some direct oversight  
6 responsibilities. They must approve states' actuarial rate  
7 certifications with MCOs, and they must also review and  
8 approve state Medicaid agency contracts with MCOs to ensure  
9 they include all the requirements specified in federal  
10 regulations.

11 CMS has authority to deny federal match on  
12 capitation payments for noncompliance with federal  
13 requirements and can deny federal match for new enrollees  
14 upon recommendation from the state Medicaid agency.

15 CMS denial of federal payments for new enrollees  
16 does automatically trigger denial of state payments to the  
17 MCO for those same enrollees.

18 Finally, CMS does have authority to independently  
19 perform any of the enforcement functions normally assigned  
20 to the state under the denial of payment process and may  
21 refer such cases to the Office of the Inspector General,  
22 which may impose additional civil monetary penalties on the

1 MCO.

11                   This table shows the intermediate sanctions  
12                   listed in federal regulations that states can impose on  
13                   Medicaid MCOs. These options include civil monetary  
14                   penalties, appointment of temporary management of an MCO,  
15                   granting enrollees the right to terminate enrollment  
16                   without cause, suspension of new enrollment, and suspension  
17                   of payment for enrollees.

18 The individual reasons for sanctions and the  
19 limits are defined in regulations, and I won't read them  
20 all here, but in many areas, there are limits on the amount  
21 of monetary penalties that can be imposed for each  
22 violation, and the limit ranges from \$25,000 to \$100,000

1 depending on the violation.

2 As for incentives, they are limited to 5 percent  
3 of the capitation rate. That is, total payment under  
4 incentive arrangements may not exceed 105 percent of the  
5 capitation rate under actuarial soundness standards. And  
6 these incentives must be for a fixed period of time. They  
7 cannot renew automatically. They must have similar terms  
8 across contractors, and they must align with initiatives  
9 under the state's quality strategy.

10 So, with those requirements in mind, next, we'll  
11 present our findings from the stakeholder interviews  
12 conducted with the assistance of our contractor.

13 These are a summary of our findings from 18  
14 stakeholder interviews conducted between December 2024 and  
15 May 2025. We interviewed state Medicaid agency officials  
16 and MCO representatives from six different states. We also  
17 interviewed stakeholders from Medicaid health plan trade  
18 associations, relevant federal agencies, and national  
19 experts and organizations.

20 We organized the interviewee feedback into three  
21 domains that support MCO accountability: procurement and  
22 contract requirements, use of accountability tools, and CMS

1 oversight and guidance.

2 Next slide. Thank you.

3 We heard from our stakeholders that the  
4 procurement process provides an early opportunity for  
5 states to identify high-performing plans and establish  
6 performance expectations. States often use the procurement  
7 process to understand past performance of bidding MCOs,  
8 reviewing this information to ensure MCOs were compliant  
9 with the terms and prior contracts, and to be aware of any  
10 issues that bidding MCOs have had.

11 However, some stakeholders mentioned that state  
12 procurement rules can limit how past performance can be  
13 used in the procurement process, sometimes prohibiting such  
14 information or forbidding the use of publicly available  
15 information about MCO performance from other states to  
16 validate MCOs self-reports.

17 Besides using past performance in the bid  
18 evaluation process, some states also use this information  
19 to proactively monitor for potential performance issues by  
20 revising or adding new reporting requirements.

21 For example, upon learning during the procurement  
22 process that one MCO had a prior record of high rates of

1 service authorization denials, one state created a monthly  
2 reporting and monitoring process to track and compare MCO  
3 service denials.

4 All state Medicaid agencies interviewed engaged  
5 in regular meetings with MCOs to proactively identify and  
6 address performance issues. Both states and MCOs noted  
7 that maintaining ongoing communications and relationships  
8 is important for addressing and resolving issues before  
9 they escalate to formal accountability tools, such as  
10 sanctions, when possible.

11 States vary the use of accountability tools based  
12 on the severity and duration of the contract violation or  
13 performance issue. To determine which accountability tool  
14 is most appropriate, some states rank contract violations  
15 and performance issues by severity and how quickly the plan  
16 resolves the problem.

17 All six states interviewed set thresholds that  
18 automatically impose a serious penalty, such as a fine or  
19 enrollment suspension, for violations or performance issues  
20 that have immediate consequences for enrollees.

21 The interviewed states varied in how and when  
22 they impose formal sanctions, and some lacked documented

1 criteria and policies as to what triggers escalation.

2 Stakeholders generally preferred incentives over  
3 penalties for motivating improvement in MCO performance and  
4 behavior change. Many interviewees mentioned that  
5 incentives like bonus payments, auto assignment, and  
6 capitation withholdings were more effective in fostering  
7 competition among MCOs to achieve improvement targets.

8 States do use sanctions, but they can be more  
9 challenging to administer. Some interviewees noted that  
10 sanctions can be hard to impose because MCOs frequently  
11 appeal such enforcement actions, which lengthens the time  
12 it takes to resolve the issue.

13 Additionally, the extent to which state Medicaid  
14 agencies use available accountability tools can reflect the  
15 priorities of the executive or legislative branch. A few  
16 state officials mentioned that MCOs lobbied the state  
17 legislature or governor's office to obtain relief from  
18 their sanctions.

19 All state officials, national experts, and  
20 federal officials recognize public reporting as a tool to  
21 promote transparency and accountability, though states vary  
22 in the information released in their reporting methods.

1                   For example, four of the six interviewed states  
2   post corrective action plans, or CAPs, and monetary  
3   penalties on state websites. The other two publish quality  
4   measure performance only. One state official noted that  
5   public disclosure often motivates the plans to resolve  
6   issues, so public reporting is seen as one of their most  
7   effective accountability tools.

8                   Next slide.

9                   While CMS has broad authority to ensure that  
10   state Medicaid managed care programs are structured to be  
11   compliant with federal requirements, it has fewer tools to  
12   directly address specific MCO deficiencies. CMS can defer  
13   federal matching funds only for the entire amount of the  
14   capitation payment made to the plan.

15                  In practice, CMS rarely uses this authority  
16   because withholding funding for the entire capitation  
17   payment can disrupt the financing of all beneficiary care  
18   provided through the managed care plan, not just the  
19   particular issue that needs to be addressed.

20                  Federal officials noted that CMS lacks some of  
21   the oversight tools available in fee-for-service, such as  
22   imposing formal CAPs on states or deferring a share of the

1     federal match for capitation payments in proportion to the  
2     severity of noncompliance.

3                    Additionally, while state Medicaid programs have  
4     broad authority to manage their MCO procurements within the  
5     bounds of state procurement law, some interviewees  
6     suggested that CMS has an important role in providing tools  
7     and practical information to state Medicaid staff to fully  
8     leverage the MCO procurement process.

9                    Several interviewees also suggested that there is  
10    an opportunity for CMS to help states by developing a  
11    national database of MCO contract violations and sanctions.  
12    They noted that CMS and states are already collecting the  
13    data, but it is not publicly available in a comprehensive  
14    or user-friendly format.

15                   MCPARS do contain information on sanctions, but  
16    as we will present next, there are some limitations to what  
17    has been reported to date.

18                   Next slide.

19                   To supplement our interview findings, we also  
20    analyzed the Managed Care Program Annual Reports, or  
21    MCPARS.

22                   Next slide.

1 States are required to post MCPARs on their state  
2 Medicaid website, and CMS posts MCPARs from states in a  
3 central repository on Medicaid.gov. The MCPARs include  
4 information on sanctions and CAPs that states imposed on  
5 their MCOs the previous year.

6 For this analysis, we reviewed MCPARs submitted  
7 for performance year 2023, which spans from September 2023  
8 through August 2024, from 34 states that were available on  
9 Medicaid.gov. Our analysis focused on the types of  
10 sanctions, amount of financial penalties, reported reasons  
11 for the intervention, and time to remediation.

12 Overall, we found that the MCPARs echoed  
13 interview findings that states are more likely to take  
14 intermediary steps, such as CAPs, before levying monetary  
15 penalties. Twenty-five different states used CAPs as a  
16 tool versus 11 states that reported civil monetary  
17 penalties and 10 states with liquidated damages. Only 12  
18 of 359 CAPs, 3.3 percent, had an associated financial  
19 penalty. Additionally, the amount of financial sanctions  
20 imposed varied, but the most common value reported was less  
21 than \$5,000.

22 We categorized the topics reported as reasons for

1 the intervention and found that average sanction amounts  
2 vary by intervention type, with sanctions related to  
3 beneficiary rights and communications as the least costly  
4 for MCOs.

5 Additionally, we found that the majority of  
6 reported sanctions, close to 55 percent, were remediated  
7 within 90 days and only 3 percent took longer than 360 days  
8 to resolve. Based on the number and type of sanctions  
9 reported in MCPARs for the states examined in this study,  
10 it is likely that states are not reporting all sanctions in  
11 MCPARs.

12 For example, Florida did not report liquidated  
13 damages as MCPAR sanctions. According to their state's  
14 website, Florida's managed care compliance actions totaled  
15 \$33.8 million in liquidated damages in fiscal year 2023-'24  
16 and one sanction of \$2,500. The MCPAR data only includes  
17 the one \$2,500 sanction and failed to capture the  
18 liquidated damages.

19 The MCPARs are in the first couple years of being  
20 reported, so it is possible that these data will improve as  
21 states become more accustomed to the reports. However, our  
22 initial findings raise questions about the current

1   usability of such reports to track the actual use of these  
2   accountability tools and to provide a full picture of MCO  
3   performance.

4                   In summary, stakeholder interviews indicated that  
5   states generally have sufficient tools through sanctions  
6   and incentives to oversee MCO performance and ensure that  
7   plans are meeting performance expectations. Most states  
8   take an incremental approach and use regular check-ins to  
9   identify and address performance issues before issuing  
10   formal sanctions, which may be one reason there are not  
11   many sanctions reported on the MCPARS.

12                  Stakeholders generally agreed that incentives and  
13   sanctions that have a substantial impact on plan revenue  
14   are more effective, such as changes to auto-assignment  
15   algorithms.

16                  Additionally, many stakeholders thought that the  
17   public reporting of MCO performance, such as information on  
18   frequency and type of sanctions, could be a useful tool for  
19   oversight and future procurement decisions.

20                  While the existing tools are generally  
21   sufficient, some stakeholders suggested there may be  
22   opportunities for CMS toolkits or other guidance that could

1 help states design more effective procurement processes or  
2 sanction policies.

3                   Federal officials and national experts commented  
4 that CMS does not have the same authority to oversee and  
5 address issues in managed care that they do in the fee-for-  
6 service program, and they were interested in equalizing the  
7 tools across the delivery systems.

8                   Staff would appreciate Commissioner feedback on  
9 the interview findings and areas for potential policy  
10 options. We outlined some discussion questions here that  
11 Verlon will lead us through, and if Commissioners are  
12 interested in pursuing policy options, staff will return to  
13 present the policy options at the next meeting.

14                   Thank you.

15                   CHAIR VERNON JOHNSON: All right. Thank you so  
16 much, Holly. That was very clear and a comprehensive  
17 overview and really appreciate that very much.

18                   As Holly indicated, we do have a list of  
19 questions that we'd like you to think about as we move  
20 forward on further analysis of this area for sure.

21                   So, with that, you'll see that the first one is  
22 really about research and really getting some more feedback

1 about the potential policy options that are there, and let  
2 me go ahead and open up for questions for the Commissioners  
3 now so they can give us their thoughts.

4 Sonja?

5 COMMISSIONER SONJA BJORK: Holly, can you say a  
6 little bit more about the reporting gaps? Because, you  
7 know, I'm in California. There's a lot of sanctions, and  
8 so I know even just in California, for measurement year  
9 '23, there was over \$3 million worth of sanctions, you  
10 know, to 20 different managed care organizations. And so  
11 it just doesn't feel like it's reflected properly, and you  
12 already acknowledge that. But what do we do? We don't  
13 have the right info here. Because when it says there's an  
14 average of like \$5,000 sanctions, boy, that'd be a great  
15 level. You know, there's really so much more going on in  
16 sanction land. So how do we get a view of that across the  
17 nation? Do you have any ideas about that?

18 CHRIS PARK: Sure. I'll jump in, Sonja.

19 So I think that's part of the findings is that  
20 people point to MCPAR as a potential way to, you know, have  
21 this information made public and have that kind of  
22 transparency as to what's going on in a managed care

1 program, but as you can see, that particularly during these  
2 first couple of years of reporting, it doesn't seem like  
3 the information is complete. And, you know, we're not  
4 sure, particularly what the reasons are. Some of it may be  
5 definitional, like Florida didn't consider liquidated  
6 damages to be sanctions *per se*. So they didn't report  
7 them, and there's quite a significant amount of liquidated  
8 damages in Florida.

9 Some of it might be particularly, like, when  
10 reports are cut and as to what point in time the sanctions  
11 are in terms of, you know, if they're being appealed, then  
12 should they be reported until, you know -- like, until  
13 they're finally resolved. And so we did see, as Holly  
14 mentioned, a few of those sanctions, at least with the  
15 reported dates on the MCPARs, it took over a year to  
16 resolve. So, you know, I think there's some of those --  
17 may be issues potentially.

18 But, yeah, I think that's part of the findings  
19 and the interest in, you know, maybe either through MCPARs  
20 or, like, refining them or, like, just trying to get them  
21 in better shape to make this a better tool that could be  
22 used both by states in procurement so that they have a way

1 to kind of view plan performance across states as well as,  
2 you know, potentially for beneficiaries to be able to use  
3 in terms of, like, oh, this plan had a particular issue on  
4 provider networks, and maybe, you know, I'd want to think  
5 about whether I want to enroll in that plan versus another  
6 plan.

7 COMMISSIONER SONJA BJORK: And I'll just add

8 HOLLY SALTRELLI: Yes. And these are --

9 COMMISSIONER SONJA BJORK: Oh, just one sec,  
10 Holly.

11 These are common, you know, when there's a new  
12 template or reporting that different entities have  
13 different interpretations, and then sometimes there's  
14 technical assistance calls or, you know, like, how does  
15 clarity or how will clarity on definitions and things like  
16 liquidity, things like that? What's the pathway to get  
17 everybody on the same page so that the reporting is more  
18 accurate?

19 CHRIS PARK: So, certainly, I think that's where  
20 some of the stakeholders, like, thought that CMS could have  
21 a bigger role in terms of providing guidance and maybe  
22 clear definitions.

1                   And am I frozen?

2                   HOLLY SALTRELLI: No.

3                   COMMISSIONER SONJA BJORK: No, we heard you.

4                   And, Holly, I'm sorry to interrupt you. I didn't  
5 mean to cut you off.

6                   HOLLY SALTRELLI: No, I was just going to add to  
7 Chris's point about beneficiary use. These are located in  
8 individual PDFs deep on the Medicaid.gov website. This  
9 isn't like a searchable database that, you know, we think  
10 of when we think of the star ratings, for example. This is  
11 within a PDF, not even necessarily like anything  
12 searchable, and each individual one corresponds to one plan  
13 package for that state. So it's not exactly accessible in  
14 addition to not collecting necessarily the right data.

15                   CHAIR VERNON JOHNSON: All right. Thank you.

16                   Tim and then Patti.

17                   COMMISSIONER TIMOTHY HILL: Thanks. This is  
18 helpful and I think a really good topic for us to keep  
19 digging in on. In terms of accountability tools, I just  
20 want to iterate, reiterate the need for CMS to have some  
21 sort of intermediate financial sanction, right, the fact  
22 that the deferrals are broad on the managed care side, it's

1 very much a nuclear option. It's very hard to target a  
2 specific financial accountability tool on a state, given  
3 the way that the regs are written. So providing CMS with  
4 that authority to defer sets of capitated payments to  
5 particular plans I think would be incredibly helpful, like  
6 they can on the managed care side.

7 The other point, and maybe this is a little  
8 beyond what you guys were looking at, but I think when we  
9 think about compliance and accountability and the measures  
10 and the tools that we're using, I would encourage us to  
11 continue to think about ways that we can involve  
12 beneficiaries in these conversations. I mean, all too  
13 often the accountability and compliance tools we use are  
14 based on the data that we have, which doesn't always take  
15 into account beneficiary experience and understanding about  
16 what it's like to interact with a plan. So continuing to  
17 push CMS and ourselves to think about how we interact with  
18 beneficiaries and collection information from them directly  
19 about plan behavior and compliance I think would be  
20 important, and I think add a lot to the conversation.

21 Thanks.

22 CHAIR VERNON JOHNSON: Thank you, Tim. Great

1 comments. Patti.

2 COMMISSIONER PATTI KILLINGSWORTH: First of all,  
3 with regard to the fact that it's such a small percentage  
4 of CAPs ultimately results in some sort of a financial  
5 sanction. I think it's a good thing. If we think about  
6 sort of progressive sanctions, and you're really starting  
7 with identifying an area where corrective action is needed,  
8 and you're building in an accountability mechanism, the  
9 hope would be that that's sufficient to correct issues  
10 without then having to sort of take that next step towards  
11 financial sanctions, just trying to sort of put that in  
12 context.

13 As someone who was in a state for a couple of  
14 decades, and I think a state that really utilized both  
15 incentives and, in particular, sanctions, really, really  
16 well, there are many tools available to states. I think  
17 that sometimes states lack maybe -- I don't know if I would  
18 say capacity, but really in this sense, of sufficient  
19 staff, to be able to oversee health plans at the level that  
20 we might like, especially in states that have larger  
21 numbers of health plans. It really does take a close  
22 working relationship to have your finger on the pulse of

1 what's happening and be able to use those tools well.

2 I will say, I probably respectfully disagree a  
3 bit with my colleague, Tim, on CMS's oversight authorities.

4 See, when I think about how the fee-for-service program is  
5 overseen versus the way that states oversee managed care,  
6 my guess is there are far more sanctions assessed in  
7 managed care than there are in fee-for-service. But that  
8 would be an interesting look at data, to actually see how  
9 CMS is using the sanction tools that are available to them  
10 on the fee-for-service side.

11 I continue to believe that sort of the order of  
12 that relationship is CMS to states, and then states to  
13 their health plans, and that CMS has all of the leverage  
14 that they need to really oversee states, and states have  
15 the tools that they really need to oversee health plans.  
16 But I'm certainly open to additional discussions on that,  
17 going forward.

18 And then I would say, too, I completely agree  
19 with transparency in data. I would be hesitant to add  
20 additional reporting. We have the MCPARs. Let's try to  
21 make them what they're sort of intended to be. I do think  
22 that very consistent data element requirements is key in

1 sort of making sure that's clearly communicated, and that  
2 that's happening before we think about adding to.

3                   And then I would just caution us in terms of  
4 putting things in context. We were a state who tended to  
5 assess sanctions more than other states, and our health  
6 plans didn't love that because, you know, from their  
7 perspective that looked sad on us, when another state might  
8 not assess the same sanctions.

9                   Every state sort of approaches oversight  
10 differently. I do think it's powerfully important when  
11 things are important in a program to be able to build an  
12 accountability mechanism and work with health plans to be  
13 successful while also holding them accountable for making  
14 sure that the program is implemented as the state intends.

15 Thank you.

16                   CHAIR VERNON JOHNSON: Thank you, Patti. John.

17                   COMMISSIONER JOHN McCARTHY: Just a lot here on  
18 this one. This is one of those areas I agree a lot with  
19 what Patti said on this one.

20                   It is so complex that just breaking it down to  
21 these three areas I think is really hard. You know, I was  
22 reading through the memo last night. There's a lot of good

1 information in there. Some of it is just the fact of  
2 you're taking all that information and boiling it down to  
3 these three points right here.

4 I do want to say, should CMS have the same  
5 authorities, overseeing the fee-for-service program, the  
6 managed care program? Sure. I think many of us would say  
7 yeah, that's a good way to go. But then the question  
8 becomes, like, what does that mean and what does that look  
9 like? And obviously having the ability to do more than  
10 just we're going to withhold all payments from a state, you  
11 know, that just doesn't work, so it's like what can you do  
12 around some of these things?

13 But I want to hit on this. This program has just  
14 kind of started. We're getting information on it. It will  
15 lead to new questions, that type of a thing. But I would  
16 caution us, as MACPAC, to be jumping forward on things,  
17 like helping states or telling them how this should be used  
18 in procurement, for a whole bunch of reasons. Some of them  
19 include just because a plan is not doing well in one state  
20 does not mean that it's doing poorly in your state. So if  
21 you're doing a procurement and you're holding that against  
22 a plan, and a procurement, like, oh well, you have these

1       sanctions in this other state, but they're doing great in  
2       your state, with no sanctions -- how does that hold up in  
3       procurement process, or even court, if you go to court?

4               Likewise, if you've got a plan that's not in your  
5       state, but they do have sanctions in another state, then  
6       you would be using that against them. So again, it makes  
7       it difficult to look at that.

8               Also, somebody brought up in there, the implicit  
9       information doesn't show up in Stars report. Well, I mean,  
10       it probably does in some way, shape, or form in creating  
11       the Stars report. So if you have a report card for a  
12       state, I'm sure, at some level, like for Ohio, for  
13       instance, this information went into creating our report  
14       card for the plans. It just you didn't see it. And the  
15       reason is because when we showed enrollees the report  
16       cards, if you gave them more than like two or three pieces  
17       of information, it's just overwhelming. Just like us.  
18       Like if I'm looking at buying a policy off the exchange,  
19       you can't show me 65 different metrics and expect me to  
20       pick from it. People just want to see an A, B, C, D, and  
21       not even like by certain areas. They just want to see it  
22       overall. So how does that fit into things?

1                   Now, could you make it more transparent? Sure.

2     Everything can be. But there's just so much information  
3     here on this one that it makes it tough to use.

4                   So I think it's a great start to some work here,  
5     looking at these things. I agree with Sonja. We have to  
6     kind of wait to see how this falls out. And again, it's 51  
7     different programs, so I don't know if we necessarily, on  
8     this one, need to say, hey, everything has to look exactly  
9     the same when it comes to these things, because as Patti  
10    said, states do this oversight in different ways. And  
11    also, just if you're looking at it, two different programs  
12    might have, as you guys know, as Medicaid Director in D.C.  
13    and Ohio, you can't have the same dollar amounts for  
14    sanctions because the plans are so much smaller or larger.  
15    So there's a big issue there, too.

16                  Anyway, a lot of good work. We need to keep  
17    moving on this. But I just caution us on some of these  
18    areas as we move forward.

19                  CHAIR VERNON JOHNSON: Thank you, John. I just  
20    need to ask a question related to what you just mentioned  
21    about procurement rules. So Chris and Holly, from your  
22    interviews, do states even express interest in having more

1 flexibility, to use past performance, and if so, do they  
2 have different examples of approaches that helped them work  
3 within those kinds of procurement rules where they have  
4 them? I'm just curious.

5 CHRIS PARK: I don't think it was like a need for  
6 a federal requirement for past performance or anything like  
7 that. It was more about like the availability and  
8 transparency of data. You know, in certain cases they're  
9 relying on the plans to self-report the information, and  
10 there could be questions as to whether they're getting  
11 complete information on what that would be. Or it's a  
12 burdensome process and so if that information is already  
13 available in MCPAR maybe you don't need to go through that  
14 information. Or ones they got something differently than  
15 another state, so there may be some state variation there,  
16 like on the MCPAR, that could be useful.

17 To John's point, I think there is also  
18 variability in how states use the past performance. You  
19 know, often it was assigned some points, but we heard from  
20 states that wasn't like the deciding factor. So it was  
21 just one part of a broader set of considerations as they  
22 were making their bidding decisions. There was some

1 recognition, particularly for new entrants in the state,  
2 like how does that compare to the incumbents and how do you  
3 evaluate them consistently and appropriately with the past  
4 performance?

5 So I don't think there was necessarily a need to  
6 require past performance in the procurement. For the most  
7 part, the procurement process is handled by the state.  
8 It's just having more information readily available that  
9 could be used to the states that want to use that  
10 information.

11 CHAIR VERNON JOHNSON: All right, great. Thank  
12 you. Mike.

13 COMMISSIONER MICHAEL NARDONE: Thanks. Thanks  
14 for this analysis. I mean, I think I tend to agree with  
15 the comments made previously around, let's look at MCPARS  
16 and see how can we make it better. You know, we're already  
17 collecting this data. It sounds like it's a little  
18 sporadic, not fully fleshed out, in certain aspects. And  
19 maybe part of this is, rather than kind of thinking about a  
20 new tool or seeing if we can make what we have better, to  
21 provide the information that we need to kind of assess  
22 managed care.

1                   I also was wondering about where QRS systems kind  
2    of fit into this, in terms of, you know, that's another  
3    thing coming down the pike around managed care. That will  
4    help to assess the quality of Medicaid services. So I  
5    wonder if we don't have kind of the tools in place, and our  
6    goal really needs to be making sure that those are  
7    providing the type of information that we need on managed  
8    care plans to make sure they're doing the jobs that they  
9    should be doing.

10                  I would say that one of the thoughts, as I was  
11   thinking about this, it's also important to kind of keep in  
12   mind to the extent that we're assessing the performance of  
13   plans, that there are differences based on the populations  
14   that are served. So if you're looking at an MLTSS plan,  
15   you might have different quality goals that you might like  
16   to see. So I think maybe it's a little off topic, but it  
17   does feel like if you are doing an assessment of how  
18   managed care is working you need to take into account what  
19   is the population that's being served and what are some of  
20   the differences, in terms of the population being served.

21                  I do think that there is some additional work, as  
22   Tim and others have mentioned, around the sanction

1 authority at CMS. You know, I was in the role of being in  
2 charge of managed care at CMCS, and we did have situations  
3 where we had to face a situation where we felt that we  
4 would like to assess a financial penalty, but the size of  
5 it, it was a nuclear option, and it was a bridge too far.  
6 So having some sort of intermediate authority would have  
7 been helpful in those instances. But I think Patti and  
8 John make a good point as to you want to make sure it's  
9 kind of consistent with what you see on the fee-for-service  
10 side.

11 And along the lines of kind of using tools that  
12 are already in place and making sure that they're achieving  
13 the job, one of the things that CMS does do is, in addition  
14 to oversight of actuarial soundness, it also is reviewing  
15 contract terms for all the MCO contracts. And I think  
16 that's been somewhat of a more rote process, and I wonder  
17 if there are things that can be built into that process  
18 that, as CMS is reviewing contracts that they could have  
19 some input on achieving the goals that we're trying to  
20 achieve in those contracts.

21 CHAIR VERNON JOHNSON: Thank you, Mike. Chris or  
22 Holly, anything else related to Mike's comments at all.

1 All right, okay. Dennis, you're up next.

2 COMMISSIONER DENNIS HEAPHY: Thanks. I've been  
3 involved with Medicare Advantage procurements, looking at  
4 the model of care, and really diving deep into that model  
5 and assessing the quality of it. And even though with the  
6 consumer engagement folks, it's not binding. It can affect  
7 how the contracts are written. So I just share that. It's  
8 been frustrating having been on a couple of those  
9 committees that you can see past performance, and know that  
10 past performance does not match with what they're  
11 presenting in the proposal, but you're not allowed to use  
12 that information.

13 It's also frustrating when, if a plan that's  
14 presenting, let's say, utilization management strategy, and  
15 you know that in other states the utilization management  
16 strategy leads to reduced access to services because it's  
17 just out there. The information is out there.

18 So I think there is merit to looking at past  
19 performance and looking at performance in other states, if  
20 not performance itself, looking at what's underlying the  
21 performance, like what led to the sanctions, what led to  
22 the low quality measure ratings.

1                   And the other piece, going back to what Tim said  
2    in the beginning -- and thanks, Tim -- is providing people  
3    with the information they need to make decisions about  
4    which plan they join. And you can do it very simply. Like  
5    for an LTSS plan, what are the approvals? What are the  
6    denials? What approvals are overturned and which ones are  
7    upheld? So I do think that's really important, like what  
8    are those categories that are important to people, so they  
9    can make a decision. And the Star ratings doesn't include  
10   HCBS and LTSS services, so consumers need something to  
11   augment what's lacking in the Star rating system.

12                  I appreciate everything that was in here, and I  
13    think that the engagement with consumers, beneficiaries at  
14    the start, at the lower level, like more base levels, can  
15    actually lead to reduced need for MCPAR insufficiency  
16    reporting.

17                  CHAIR VERNON JOHNSON: Thank you, Dennis. I see  
18    April.

19                  COMMISSIONER APRIL HARTMAN: I would also  
20    encourage talking to providers, and the reason for that is  
21    looking at some of this data that's out there is really not  
22    representative of what we experience. For instance, one of

1 the biggest things is access. And the way it works is as a  
2 provider, I've split my time between three different  
3 clinics, what happen is because the managed care plans have  
4 to assign a primary care provider to each member, they're  
5 going to assign a certain number of people to me at each  
6 practice that I go to, regardless of how much time I spend  
7 there, or even if I'm capable of seeing that number of  
8 patients.

9 So what happens is you get a bunch of patients  
10 assigned to you. Then can check their box saying that they  
11 provided access as a primary care provider. But in  
12 reality, there is not someone there that has the capacity  
13 to take care of those members.

14 So when I'm looking at this data that's out there  
15 and they're checking the box saying, yes, we have met this  
16 within a certain number of miles, there's access, in  
17 reality it's a lot different. So also taking into  
18 consideration the fact that a lot of providers are part-  
19 time or work at multiple practices. Like a lot of things,  
20 the number of patients that get assigned to us is sometimes  
21 just -- we can't handle it. We can't see that many people.

22 CHAIR VERNON JOHNSON: Thank you, April. That's

1 a good perspective and I'm glad you were able to share that  
2 with us, for us. Are there any other Commissioners that  
3 have additional thoughts or questions? John.

4 COMMISSIONER JOHN MCCARTHY: I just want to  
5 clarify some things from my statement before. I'm not  
6 saying that this information shouldn't be used to look at  
7 past performance. I think Dennis had said something to the  
8 effect if like, well, I should be. It should be for that  
9 plan in that state, because obviously if you're an  
10 underperforming plan it should be used in a procurement for  
11 that plan. Where it could be difficult is where you're  
12 looking at that past performance in another state, and if  
13 you've got conflicting information, as in your state your  
14 plan is doing well, you don't have any sanctions, and  
15 things are good, but in another state they have poor  
16 performance. When you're using that in a procurement it's  
17 difficult to score that.

18 So I just want to make clear that this is good  
19 information, and it can be used, and it should be used in  
20 the state. Like I used it in Ohio and D.C. It's just how  
21 do you use it is. I was reacting to our bullets on this  
22 page, along with some of the things that were said earlier,

1 of how can we tell states to use this. And I'm saying I  
2 don't know if we should be just telling states to use this,  
3 because there are so many nuances in there. I just wanted  
4 to get a clarification on that.

5 CHAIR VERNON JOHNSON: Thanks, John, for that  
6 clarification. Any other comments? Okay, we have Mike.

7 COMMISSIONER MICHAEL NARDONE: I was just going  
8 to ask, one of the recommendations or one of the questions  
9 was around providing additional information to states  
10 around procurement processes or sanction policies. And I'm  
11 just wondering, was that a recommendation or something that  
12 came out of state stakeholders? The reason I'm asking is  
13 because so much of that is state-specific. The procurement  
14 process is a more centralized function, and they kind of  
15 are in their own space, outside the Medicaid space. And so  
16 I'm just wondering, was that something that states  
17 recommended, or was it just, you know, kind of a question  
18 that you are raising based on some of the conversations  
19 with other stakeholders?

20 CHRIS PARK: Yeah, it's --

21 CHAIR VERNON JOHNSON: Go ahead, Chris.

22 CHRIS PARK: Okay. I was going to say, it's a

1 little bit of both, in the sense that we did hear from a  
2 few state interviewees about it would be nice to have a  
3 little bit of guidance, I think, in terms of almost like,  
4 or toolkits, almost like best practices of this is how some  
5 states have designed an effective procurement process,  
6 particularly around thinking about the past performance and  
7 things like that.

8 I don't think there's any suggestion that certain  
9 things should be required, because there is a recognition  
10 that this is largely in the state's purview to control  
11 their procurement process, and a lot of it is subject to  
12 state laws and regulations. But if there were federal  
13 guidance or toolkits, there might be places where states  
14 would want to change their own procurement laws to kind of  
15 maybe fit into some of these suggestions.

16 And then we also kind of mentioned sanctions  
17 policies, and there are a couple of statements from the  
18 states, particularly on the appeals process, and if there  
19 is any clarification or guidance as to what maybe states  
20 would be allowed to do in terms of structuring what the  
21 appeals process looks like when a plan appeals a sanction.  
22 They thought that would be helpful, as well.

1                   COMMISSIONER MICHAEL NARDONE: Thanks.

2                   CHAIR VERLON JOHNSON: Thank you. All right, so  
3 one last call for Commissioners.

4                   [No response.]

5                   CHAIR VERLON JOHNSON: Okay. Well, hearing none  
6 I want to thank the Commissioners for your thoughtful  
7 reflections, and also very much thankful to Holly and Chris  
8 for the excellent work and the presentation. And Chris and  
9 Holly, do you have everything you need in terms of your  
10 next steps from us?

11                  HOLLY SALTRELLI: Yes. Thank you very much for  
12 your time.

13                  CHAIR VERLON JOHNSON: All right. Thank you so  
14 much.

15                  CHAIR VERLON JOHNSON: All right, this is our  
16 final session, we will now open the floor for public  
17 comments. In order to do that we are inviting people in  
18 the audience to raise your hand if you would like to offer  
19 a comment. Please make sure you introduce yourself and the  
20 organization you represent. And we do ask that you keep  
21 your comments to three minutes or less.

22                  [Pause.]

1 CHAIR VERLON JOHNSON: We have two. All right.

2 So, Arvind, your mic is now open to comment.

3 Arvind?

4 **### PUBLIC COMMENT**

5 \* DR. ARVIND GOYAL: Can you hear me all right?

6 CHAIR VERLON JOHNSON: We can hear you now.

7 DR. ARVIND GOYAL: Thank you, Madam Chair, for  
8 the opportunity and thank you Commissioners and staff for  
9 your excellent work on this topic as well as many others  
10 that you constantly discuss and hopefully improve.

11 I want to say that there are probably good people  
12 on both sides, both sides meaning the government as well as  
13 the Medicaid agency and the MCOs. However, all of us have  
14 been in various schools and I've never been promoted  
15 without some sort of a quiz, some sort of a test, some sort  
16 of a performance evaluation. And I think that should be a  
17 minimum when we are trying to serve people who are really,  
18 really vulnerable, and I say that for each state, not just  
19 my state in Illinois.

20 I am the medical director for Medicaid program in  
21 Illinois, and previously, a few years ago, I served as  
22 Chair of the National Medicaid Medical Directors Group.

1                   So I would suggest that there'd be some sort of a  
2    national metric for evaluation, frequency to be defined  
3    based on your recommendation to a CMCS, and I would include  
4    the basic queries that should be made of managed care  
5    organizations, the network adequacy, care coordination,  
6    care management, case management, the claim processing.  
7    Somebody mentioned earlier, satisfaction by population  
8    served as well as the provider's complaints, the MLR ratios  
9    and so on.

10                  And I think that if it was prescribed, if it was  
11    required, it will increase the accountability. It will  
12    increase the quality of the work, and it will be  
13    measurable. If you don't measure it, you just assume that  
14    everybody's performing as expected. So I would suggest a  
15    toolbox with metrics defined at a national level and then  
16    you get a report that can be compared, can be looked at and  
17    can be improved.

18                  Thank you very kindly.

19                  CHAIR VERNON JOHNSON: Thank you very much.

20    Always good to hear from you.

21                  Next up, we have Tricia Brooks, our former MACPAC  
22    Commissioner. It will be good to hear your voice, Tricia.

1                   TRICIA BROOKS: Well, I missed you all, and I  
2 wish I was there to have this conversation and be not  
3 limited to three minutes.

4                   But I want to comment on two specific things.

5 One is that there's been a lot of chatter about more  
6 specific details on work reporting requirements that were  
7 shared with states at NAMD, and it's a slide deck. And we  
8 would really like to call upon CMS to be true to what the  
9 Secretary has said about radical transparency. Where are  
10 those slides? Because there are details in there that I  
11 think the stakeholder community really needs as in the same  
12 timeline that states are getting it.

13                  The second piece I want to talk about is the  
14 data. I think we set some measures up for unwinding that  
15 lend themselves to further granularity for work reporting  
16 requirements.

17                  So, for example, we would want to know of those  
18 who suggest that they report that they're working, how many  
19 ex parte reviews confirm that, right, versus how many times  
20 did people have to send in information? And you need that  
21 on not only when you're reporting work, but if you're  
22 reporting an exemption, if you're reporting community

1 engagement or education, we need that granularity on each  
2 of those.

3 But I think there are some other ways to  
4 evaluate. Obviously, we can watch enrollment in the  
5 Section 8 group as it begins to drop.

6 But I certainly hope that CMS will come out with  
7 data requirements. I don't think they need a law. We know  
8 that under unwinding, the Consolidated Appropriations Act  
9 reinforced what CMS was saying states needed to report, and  
10 they attached a financial penalty to that. And they  
11 required CMS to report the data. I don't think CMS needs  
12 that authority individually for this, because they have all  
13 of that in the approval of the enhanced funding for  
14 systems. So I think it's really important that that get  
15 built in. It's a statutory and regulatory requirement that  
16 these systems be able to produce the transaction data and  
17 the performance indicator data that's necessary to monitor  
18 the program.

19 So thanks a lot, and I am more than happy to  
20 share more of my details on my data wish list with staff.

21 CHAIR VERNON JOHNSON: That would be great.  
22 Thank you, Tricia.

1 Any other comments? Give it one second.

2 [No response.]

3 CHAIR VERNON JOHNSON: Looks like none.

4 Okay. So thank you for the comments we did  
5 receive. I do want to remind you that if you do have  
6 additional comments that you think of after this meeting,  
7 you can feel free to submit that to the MACPAC website.

8 So, as that was our last session and we did the  
9 comment period, I do want to now thank you, thank the  
10 Commissioners, the staff, and everyone who joined us today,  
11 and as we close out the year, I do wish you all a warm and  
12 peaceful holiday season. I want you all to take good care,  
13 enjoy time with your families, and we look forward to  
14 seeing you all at our January meeting.

15 This meeting is now adjourned.

16 \* [Whereupon, at 4:26 p.m., the meeting was  
17 adjourned.]
